## I Thought Success Was For Others Believe It Or Not, Just Twelve Months Ago Was Next Thing To "Down-and-Out"

TODAY I'm sole owner of the factors Topowing Radio store in town. And I'm on good terms with my hanker, too-not like the old days only a year ago, when often I didn't have one dollar to knock against another in my pocket. My with and I live in the snaggest little house yoa ever saw, right in one of the best snighborhoods. And us line the term of the start of the term in one of the best snighborhoods. The term is not sole the start plant the term in the term of the start of the term in the snight when she come to collect the term for the little house?

It all seems like a dream now, as I look hack over the past twelve short months, and think how discouraged I was then, at the "end of a blind alley." I thought I never had had a good chance in my life, and I thought I never would have ease. But it was waking up that I needed, and here's the story of how I got it.

I wAS a clerk, working at the usual misernever found any way to get into a line where I could make good money.

Other fellows seemed to find opportunities. But-much as I wanted the good things that go with success and a decent income-all the really well-paid vacancies I ever heard of seemed to he out of my line-to call for some kind of knowledge I dilur't have.

And I wanted to get married. A fine situation, wasn't it? Mary would have agreed to try it-but it wouldn't have heen fair to her.

Mary had told me, "You can't get shead where you are. Why don't you get into another line of work, somewhere that you can advance?"

"That's fine, Mary," I replied, "but sobot line? Twe siways got my eyes open for a better joh, but I never seem to hear of a really good job that I can handle." Mary didn't seem to be satisfied with the answer, hut I didn't know what else to tell her.

It was on the way home that night that I stapped of in the neighborhood drag store, where I overheard a scrap of conversation about myself. A few burning words that were the cause of the turning point in my life!

With a hot flush of shame I turned and left the store, and walked rapidly home. So that was what my neighbors-the people who knew me hest-really thought of me! "Bargain counter shtik-look how that soli fits," one fellow had said in a low voice. "Bet he have't get a dollar in those pockets." "Oh, it's just 'Useless' Anderson," said another. "He's got a with-bane where his heckhone ought to be."

As 1 thought over the words in deep hamiliation, a widden thought made me catchmy hreath. Why had Mary here so disattified with my nower that "I hadn't had a chance?" Did Mary secretly livis that loo? And a liter all, waan't it new that I had a "with-bane" where my hack hone cognit to "with-bane" where my hack hone ought to my state that the secret has a secret and a secret back of the secret has a secret secret and it had taken this cred hlow to my selfestern to make me set it.

## SPACE FLYING

VER face time immercial, de human midi and the second second second second second and the second sec

In Let up control and a general survey of the possibilities of gase flying up the flitt of greened by acience. If it becomes possible to ravigate a space flyer outside of the terrestral atmosphere, even if only to make a communityie user looky as the moon, then immediately an innortant popular coeequition becomes a vortain impossibility. I refer to the preent inlabration of reasoning beings on other planets, at least of our own universe.

The reason is simple 1f we can vavigate a space flyer, let us say, to Mars or Venus, then it may be assumed that more of the planets is now propled by reasoning, intelligent beings.

This theoretical reasoning is elementary, simply hexane, if ore do the line first, we are probably the adv reasoning world undoutcelly have visited us first. There is a revervision to the hard here end or Mare and the mean. It as the more inhabited by highly intelligent heings, they would be more inhabited by highly intelligent heings, they would have been inhabited by highly intelligent heings, they would be more inhabited by highly intelligent heings, they would be more inhabited by highly intelligent heings, they would be advected and the second of the second of the second had been tried, the recensive rouge range the second beam of the period beam of the second of the second beam of the second beam of the second beam of the second to set for second beam of the second beam of the beam of the second beam of the second beam of the beam of the second beam of the second beam of the beam of the second beam of the second beam of the beam of the second beam of the second beam of the beam of the second beam of the second beam of the beam of the second beam of the beam of the second beam of the second

If this were the case traces of their stellarsion would very likely be loaded by the first steame (brinn previo that set regress to that concerning the crede through which the earth behavior more (11) for instance, we over to travely to make find that it was impossible, because these phases are still to steam the steame of the steamer would make them beare thus, in the same condition as the earth was millions of the statement of the steamer conditions that the state are thus, in the same condition as the earth was millions of the statement of the steamer condition as the state statement of the statement of the statement of the statement is lot any statement of the statement of the statement is lot any years ago and they are slowly cooling and solitijiyag. Next we come to some other important considerations. There is a chance that Mars, and indeed, other planet: belonging to other parts of our universe, may be peopled with beings of intelligence far higher than our own. They may have space flyers, and yet may be prevented from withing our earth, far the following reasons: It is one thing to construct a practical space flyer which

It is one thing to construct a practical space fiver which its many conductions theoretically, but it is another thing absorber to averaging exercessfully in space. An analogy absorber to averaging the second state of the second argument. It is theoretically possible to dy an argumptace across any of our occess, but for practical reasons, it is a tramovabut risk and will remain so for some practs. In space fights, however, we have obstacles that may never be overtheorems folly to attempt to basedings that it is becomes folly to attempt it.

It is well known today that the space between our box-repubolics is not pice one press and ency vacuum. Quies the count body the space of the space of the space of the count body the space of the space of the space of the body of the space of the space of the space of the known that their distribution is rather shows, and it may earth to the move without encountering dozen of sale of establish projectiles, traveling at speed of an inpla s for effecting projectiles, traveling at speed of an inpla s for which they could be another anything with which they could be could be anythic the space of th

We are fortunate that our earth possesses an atmosphere, hecasise like meteors entering the upper strata of our gascous envelope are ignited by the friction and usually are reduced to dust before they trave, very far. This meteoric dust stitles noon the earth gradually.

Our in free pance, where there is no atmosphere, no such protection exists. In space for yet work probably not faces of this imposing fan, suit ore of these bodes was immeas characterized the space of the space of the space work of the space of the space of the space of the which to accertain the approach of a meters while it is still Biognamic funder sawy. This is correst outlike the by simil pithy success that the space of the space of the probable the pance growth the case, then every with such meterized the space of the space.

Forthermore, another danger of which we know intesar yet, is the newly discovered Milliken Connic Ray. We know that these rays abound in open space, to a smelling greater extent than on earth. What these rays are capable of doing to the space flyer, has not yet been ascertained. It may be that the forces of this cosmic ray are such that it would prevent a space flyer travelling any distance at all.

Mr. Hugo Gernsback speaks every Tuesday at 9.30 P. M. from WRNY on various scientific and radio subjects.

# A STORY OF THE STONE AGE by H.G.Wells

"The Time Machine," etc.

#### CHAPTER I

#### Ugh-lomi and Uya

HIS story is of a time beyond the memory of man, before the beginning of history, a time when one might have walked dryshod from France (as we call it now) to England, and when a broad and

sluggish Thames flowed through its marshes to meet its father Rhine, flowing through a wide and level country that is under water in these latter days, and which we know by the name of the North Sea. In that remote age the valley which runs along the foot of the Downs did not exist, and the south of Surrey was a range of hills, fir-clad on the middle slopes, and snow-capped for the better part of the year. The cores of its summits still remain as Leith Hill. and Pitch Hill, and Hindhead. On the lower slopes of the range, below the grassy spaces where the wild horses grazed, were forests of yew and sweet-chestnut and elm, and the thickets and dark places hid the grizzly bear and the hyæna, and the grey apes clambered through the branches. And still lower amidst the woodland and marsh and open grass along the Wey did this little drama play itself out to the end that I have to tell. Fifty thousand years ago it was, fifty thousand years-if the reckoning of geologists is correct.

And in those days the spring-time was as joyful as it is now, and sent the blood coursing in just the same fashion. The afternoon sky was blue with piled white clouds sailing through it, and the southwest wind came like a soft caress. The new-come swallows drove to and from The reaches of the river were spangled with white ranunculus, the marky places were starred with lady-amode and little pointed tips, a thing that still, in rare instances, snrvives. Stark-naked vivid little gipsies, as active as monkeys and as full of chatter, though a little wanting in words.

Their elders were hidden from the wallowing hippopotami by the crest of the knoll. The human souatting-place was a trampled area among the dead brown fronds of royal fern, through which the crosiers of this year's growth were unrolling to the light and warmth. The fire was a smouldering heap of char, light grey and black, replenished by the old women from time to time with brown leaves. Most of the men were asleep-they slept sitting with their foreheads on their knees. They had killed that morning a good quarry, enough for all, a deer that had been wounded by hunting dogs; so that there had been no quarrelling among them, and some of the women were still gnawing the bones that lay scattered about. Others were making a heap of leaves and sticks to feed Brother Fire when the darkness came again, that he might grow strong and tall therewith, and guard them against the beasts. And two were piling flints that they brought, an armful at a time, from the bend of the river where the children were at play.

None of their buff-shired savages were clothed, but some were shout their hips rule girlds of adderstion or eracking undressed hide, from which depended little bags, not rade, but torm from the paw of beats, and carrying the ruledy-dressed finits that were mer's club wappen and the Canning Man, were a woman, the mate of Uya the Canning Man, were and the same the transformed state of the short and work helore her. Reside some of the short mem lay the hig anders of the eds, with the times chipped to sharp, edges, and long aticks, hacked at

11t with marshmallow whenever the regiments of the sedges lowered their swords, and the northward moving hippopotani, shiny black monsters, sporting, clumsily, came floandering and blundering through it all, rejoicing dimly and possessed with one clear idea, to splash the river muddy.

Up the river and well in sight of the hippopotami, a number of the little buff - coloured a n i m a l s dabbed in the water. There was no fear, no rivalry, and no ennity between them and the hippopotatoi. As the great bulks came EVIDENTLY the versatility of H. G. Wells hnows to breast, There is hardly a subject which he has been breast, which is a subject which he has what do you take a subject of the subject way has what do you take a subject of your ago in the store ago, for sampler. There were no elevite light, no ador, and, for that matter, so stif collars, no shoer, and as fark, Not even the wheel had bees inversed.

The first effective weapon of man, namely the stone ax-a tremendous invention by the way-was yet to be evolved.

What did the stows age way high about, here did they fore, what were their adjustance, what were their supertions? Did they love and have, as do we susdersar! H. G. Well has account, and a function it does not superdee summidige, in the light of persent accronations showing the implements of the stows age may and other historical the bufflet with the manual active. the ends with flints into sharp joints. There was little else save these things and the smouldering fire to mark these human beings off from the wild animals that ranged the country. But Uya the Cunning did not sleep, but sat with a bone in his hand and scraped husily thereon with a flint, a thing no animal would do. He was the oldest man in the tribe, beetle-browed, prognathous, lank-armed; he had a beard and his cheeks were hairy, and his chest and arms were black with thick hair. And by virtue both of his strength and

crashing through the reeds and smashed the mirror of the water into silvery spikabe, these little creatures shouted and gesticulated with glote. It was the sureit step of high paring. "Boldor' lithey cried, men folk, the smoke of whose encomponent rose from the kool at the river's head. Wild-speed youngsters they were, with maitted hair and little broad-noid mpika faces, covered (as some children are correct) even novembry) with a delicate down in the arms. And their cars had the follows and had in the arms, And their cars had no labors and had in the arms. And their cars had no labors and had cunning he was master of the tribe and his share was always the most and the best.

E UDENA had hidden berself among the alders, because hw was a fraid of Uyas. She was still a girl, and her eyes were bright and her snille plasant to see. He had given her a place of the liver, a man's place, and a wonderful treat. for a girl to get the had given her a place, and Ught-horn had made a noise in his throat. At that, Uya had looded at him long and steadiasty and Urbi-lomi's face had fallen. And then Uya had looked at her. She was rightneed and jak had stolen away, while the feeding was still going on, and Uya was buay with the marrow of a bone. Afterwards he had wandered about as if looking for her. And now decrouched among the alders, wondering mightly what Uya might be doing with the finit and the bone. And Ugah-honi was not to be seen.

Presently a sourced cane looping through the dates, and all by too optic the little man was within alls, field if her lafter he says her. Whereagon her and sould her. "What are you doing here," he saked, "away from the obter mere heasts" "Brace," and Elders, het her only chartered more, and then a him. The doinged and identic here, and she gree excitod and rouge to throw here, and then due away the other set of the same the same the same the away trys more could be also be also be also way trys here could be also be also be also way trys here could be also be

At that she forgot the squirrel and set off through the alders and reeds as fast as she could go. She did not care where she went so long as she escaped Uya. She splashed nearly knee-deep through a swampy place, and saw in front of her a slope of ferns-growing more slender and green as they passed up out of the light into the shade of the young chestnuts. She was soon amidst the treesshe was very fleet of foot, and she ran on and on until the forest was old and the vales great, and the vines about their stems where the light came were thick as young trees, and the ropes of ivy stout and tight. On she went and she doubled and doubled again, and then at last lay down amidst some ferns in a hollow place near a thicket, and listened with her heart beating in her ears.

She heard footsteps presently ruelling among the deal leaves, far off, and they died wavy, and everything was still again, except the scandalising of the miggen-for the verning was drawing com-and the incessant whisper of the leaves. She langhed idently to think the cuming Uva about go by her. She was not frightened. Sconetines, playing with the other grifts and task, she had find into the word, though mover so far as this. It was pleasant to be hidden and alone.

She lay a long time there, glad of her escape, and then she sat up listening.

It was a rapid pattering growing loader and coming towards her, and in a little while she could hear granting noises and the sampling of twigs. It was a little she was a subscription of twigs and the little she was an experiment of the she was and a second of the sideway shah of his mist, and she made of shanning through the trees. But the patter came nearce, they were not fording as they wandered has prior fast—or disc they would not account to it, and ran up the stem with somethics, awaring on to it, and ran up the stem with somethics of the agility of a nonder.

Down below the sharp bristling backs of the swise were already passing when she looked. And she knew the short, sharp grunts they made meant fear. What were they afraid of? A man? They were in a great hurry for lust a man.

And then, so suddenly it made her grip on the branch tighten involuntarily, a fawn started in the brake and rushed after the swine. Something else went by, low and grey, with a long body; she did not know what it was, indeed she saw it only momentarily through the interstices of the young leaves; and then there came a pause.

She remained stiff and expectant, as rigid almost as though she was a part of the tree she clung to, peering down,

Then, for a way among the trees, clear for a most point, their bilding, then it is its acceleration of the tree of the theory of the second second second trees and the second second second second second memory and the second second second second memory memory and the second second second memory memory and the second second second second second second second second second memory memory between the second second memory memory between the second sec

E UDENA suddenly became rigid, ceased to breathe, her clutch convulsive, and her eyes starting.

She had never seen the thing before, she did not even see him clearly novi, but she knew at once it was the Terror of the Woodshade. His mane was a keyend, the children would frighten one another, frighten even themselves with his mane, and run esemming to the equating-place. No man had ever feared bis anger. It was the grinzly bear, the lord of the world as the world went then.

As he ran he made a continuous growing grumble. "Men in my very lair! Fighting and blood. At the very mouth of my lair. Men, men, men, Fighting and blood." For he was the lord of the wood and of the caves.

Long after be had passed she remained, a girl of stone, staring down through the branches. All her power of action had gone frem her. She gripped by institut with hands and knees and feet. It was some time before she could think, and then only one thing was clear in her mind, that the Terror was between her and the tribe—that it would be immessible to descend.

Presently when her far was a little abated she clambered into a more confortable position, where a great branch forked. The trees rose about her, so that she could see nothing of Brother Fire, who is black by day. Birds began to stir, and things that had gone into hiding for fear of her movements erept out...

After a time the talker branches flamed out at the touch of the sums. I High overhead the rooks, who were wiser than men, went caving home to their high sever cleaver and drawn. Each on thought of going back to the squatting-place: she let herself down some way, and then the face of the Terror of the Woodshade came again. While she hesitated, a rapids aquaded clossify, and she dravel not descend

The shadows gathered, and the deeps of the forest began stirring. Eudena went up the tree again to be nearer the light. Down below the shadows came out of their liding-places and walked abroad. Overhead the blue deepened. A dreadful stillness came, and then the teaves began whispering.

Eudena shivered and thought of Brother Fire.

The sladow now were gathering in the trees, they sat on the branches and watched her. Branches and leaves were turned to ominous, quiet, black shapes that would spring on her if she stirred. Then the white owl, fitting silently, came ghostly through the shades. Darker grew the world and darker, until the leaves and twips against the aky were black, and the ground was hidden.

She remained there all night, an age-long vigil, straining her cars for the things that went on below in the darkness, and keeping motionless lest some steallup beast should discove here. Man in those days was never alone in the dark, save for such rare accident as at its. Age after age to had learn the lesson of its terror—a lesson we poor children of, though in gat a women, was in hort like a like child. She kept as still, poor little animal, as a hare before it is stred.

The stars gathered and watched her—her one grain of comfort. In one bright one she fancied there was something like Ugh-lomi. Then she fancied it was Ugh-lomi. And near him, red and duller, was Uya, and as the night passed Ugh-lomi fied before him up the sky.

She tried to see Trother Fire, who guarded the spating-place from beasts, but he was not in sight. And far away ahe heard the manmoths trampeting as they went down to the drinking-place, and once some hange balk with heavy paces harried along, making a noise the a call, het wint it was also could the rhinoceros, who stals with his nose, goes always alone, and rages without cause.

At last the little stars began to hide, and then the larger ones. It was like all the animals vanishing before the Terror. The Sum was coming, lord of the sky, as the grizzly was lord of the forest. Eudens wondered what would happen if one star stayed behind. And then the sky valed to the dawn.

When the daylight earned the fast of larking things passed, and she could detected. The was stiff, last not so stiff as you would have been, dear young lady (by virtue of your upbringing), and as she had not been trained to est at least once in three hours, hold instach liad of later lasted three days, she did not fed uncomfortably hungry. She crept down the tree very eunback, and went her way staching started hat the terror of the grinzly bear froze her started hat the terror of the grinzly bear froze her matrow.

Her desire was now to find her people again. Her dread of Uyan the Cuming was consumed by a greater dread of Noneliness. But she had hot her direction. She had run heedessly overnight, and she could not tell whether the signating-place was sumward or where it hay. Ever and again has topped and filtered, and at hat, very far away, she herd a measured chinking. It was so finit even in the morning. But she knew the sound was that of a mus sharpert but she knew the sound was that of a mus sharpert

Presently the trees began to thin out, and then came a regiment of nettles barring the way. She turned aside, and then she came to a fallen tree that she knew, with a noise of bees about it. And so presently site was in sight of the kooll, very far off, and the rive under it, and the children and the lingpoptami just as they had been yesterday. And the ling appendix of a single swaying in the morning brease. Far away by the river was the chaiter of that the face of Uya returned, on a she crept into a thicket of bracken, out of which a rabbit scattled, and lay awhile to work the separating-place.

THE men were mostly out of sight, saving Way, the flint-chopper; and at that she felt safer. They were away hunting food, no doubt. Some of the women, too, were down in the stream, stooping intent, steking mussels, cravfish, and water-snails, and at the sight of their occupation Eudena felt hungry. She rose, and ran through the fern, designing to join them. As she went she heard a voice among the bracken calling softly. She stopped. Then suddenly she heard a rustle behind her, and turning, saw Ugh-lomi rising out of the fern. There were streaks of brown blood and dirt on his face, and his eyes were fierce, and the white stone of Uya, the white Fire Stone, that none but Uya dared to touch, was in his hand. In a stride he was beside her, and gripped her arm. He swung her about, and thrust her before him towards the woods. "Uva," he said, and waved his arms about. She heard a cry, looked back, and saw all the women standing up, and two wading out of the stream. Then came a nearer howling, and the old woman with the heard, who watched the fire on the knoll, was waving her arms, and Wau, the man who had been chipping the flint, was getting to his feet. The little children too were hurrying and shouting

"Come !" said Ugb-lomi, and dragged her by the arm.

She still did not understand,

"Uya has called the death word," said Ugh-lomi, and she glanced back at the screaming curve of figures, and understood.

Wen and all the women and children were coming towards them, a starterol array of luft shock-headed figures, howing, keping, and crying. Over the knoll two youths burried. Down among the ferms to the right came a man, heading them off irrom the wood, Ugh-load fromped her arm, and the two legan transmig side by side, leaping the bracken and stepping data and why. Endows, knowing her flectures unequal chase. They were an exceptionally straightlimbed could crit those days.

They soon cleared the open, and drew near the wood of cleasturcters again—nither afraid now because neither was alone. They slackqued their pace, already not excessive. And, subdenly Euderscried and swerred aside, pointing, and looking up through the tree-stress. Ugh-long uss wite feed and legs of men, running towards him. Eudens was already normaling off at a tangent. And as be too already normaling off at a tangent. And as we coming through the trees, and rearing out hh rage at them.

Then terror came in their hearts, not the terror that numbs, but the terror that makes one silent and swift. They were cut off now on two sides. They were in a sort of corner of pursuit. On the right hand, and near them, came the men swift and heavy. with bearded Uya, anther in hand, leading them; and on the left, scattered as one scatters corn, yellow dashes among the fern and grass, ran Wau and the women; and even the little children from the shallow had joined the chase. The two parties converged upon them. Off they went, with Eudena ahead.

They knew there was no mercy for them. There was no hunting so sweet to these ancient men as the hunting of men. Once the force passion of the chase was lik the feeble beginnings of humanity in them were thrown to the winds. And Uya in the night had marked Ugh-lomi with the death word. Ugh-lomi was the day's quarry, the appointed feast. They ran straight—it was their only chance—tak-

They run straight—it was their only chance—they ing whatever gradient dams in the way, — append of of which a hyman Bel swrifter. It told on his pace—most at first, but after a time. His footsteps behind her suddenly greve remote. Giancing over her shoulder as they crossed another open space. Euclean saw that tugh-torn i was many yards behind her, and Uya close upon him, with andre aircady misel in the air to strike him down, andre aircady robustion i to strike him down, andre aircady robustion i to strike have and be shadow of the woods. Section Urb-hom in nextl. Buchen an an sidewave.

Seeing Ugh-form in peril, Endoms ran alteracy, in the set of the pering this and understanding her cry, darked his pering this and understanding her cry, darked his lightly marking large a versal wave, and dee over him. He turned to therheith, the quarticle Free Store him. He turned to the set of the set of the set of the could not degle it. It took him under the risk method to degle it. It took him under the risk wave typed with his cent blood—and came running wave. Ugh-found the set of table period to the set of the set of table period.

Uya rolled over twicz, and lay a moment before he got up, and then he did not run fast. The colour of his face was changed. Wau overtook him, and then others, and he coughed and laboured in his breath. But he kept on.

A<sup>T</sup> last the two fugitives gained the hank of the river, where the stream rain deep and narrow, and they still had firly yards in hand of Vau, the foremost pursuer, the man who made the smitting stores. He carried one, a large fint, the share of an oyster and double the size, chipped to a chisel edge, in either hand.

They sprang down the steep bank into the stream, rushed through the water, swam the deep current in two or three strokes, and came out wading again, dripping and refresbed, to clamber up the farther bank. It was undermined, and with willows growing thickly therefrom, so that it needed clambering. And while Eudena was still among the silvery branches and Ugh-lomi still in the water—for the antler had encumbered him—Wau came up against the sky on the opposite bank, and the smiting stone, thrown cunningly, took the side of Eudena's knee. She struggled to the too and fell.

They heard the pursuers shout to one another, and Ugh-Iomi climbing to her and moving jerkily to mar Wau's aim, felt the second smitting stone graze his ear, and heard the water splash below him.

Then it was Ugb-bani, the stripting, proved himself to have come to mark settake. For running on, he found Eaderas [eff hehind, limping, and at that he turned, and erying savagely and with a face terrible with sudden wrath and tricking Mood, run writing gas her locats, to the hand, whirting the antler stouty still, though she must needs limp at every stop, and the pain was already sharp.

So that Waa, rising over the edge and clutching the straight willow branches, saw Ugh-lomi tovering over him, gigantic against the blue; saw his whole body sway round, and the grip of his hands upon the andter. The edgefor the artler cance sweeping through the air, and he-saw no more. The water under the osiers whirled and eddicd and went crimson six fet down the stream. Uga following stopped knee-high across the stream, and the man who was swimming turned about.

The other men who trailed after—they were none of them very mighty men (for Uya was more cunning than strong, brooking no sturdy rivals)—stackceed momentarily at the sight of Ugh-lomi standing there above the willows, bloody and terrible, between there and the blatting girl, with the hage anther wartions of the watter a youth, and come out of it a man full grown.

He knew what there was behind him. A broad stretch of grass, and then a thicket, and in that Eudena could hide. That was clear in his mind. though his thinking powers were too feeble to see what should happen thereafter. Uya stood knee-deep, undecided and unarmed. His heavy mouth hung open, showing his canine teeth, and he panted heavily. His side was flushed and bruised under the The other man beside him carried a sharpened bair. stick. The rest of the hunters came up one by one to the top of the bank, hairy, long-armed men clutching flints and sticks. Two ran off along the bank down stream, and then clambered to the water, where Wau had come to the surface struggling weakly, Before they could reach him he went nnder again. Two others threatened Ugh-lomi from the bank.

He answered back, shouts, vague insults, gestures. Then Uya, who had been hesitating, reared with rage, and whirling his fists plunged into the water. His followers splashed after him.

Ugh-boni gliniced over his shoulder and found Eudens alteady vanished into the thicket. He would perhaps have waited for Uya, hat Uya preferred to par in the water helve him until the others were heade him. Human tactics in those days, in all serious fighting, were the tactics of the pack. If very that Ugh-boni felt the rush coming, and hurling the antier at Uya, turned about and field.

When he halted to look hack from the shadow of the thicket, he found only three of his pursuers had followed him across the river, and they were going back again. «Uya, with a bleeding month, was on the farther side of the stream again, but lower down, and holding his hand to his side. The others were in the river dragging something to shore. For a time at least the chase was intermitted.

Ugh-lomi stood watching for a space, and snarled at the sight of Uya. Then he turned and plunged into the thicket.

In a minute, Eudena came hastening to join him, and they went on hand in hand. He dimly perceived the pain she suffered from the cut and brussed knee, and chose the easier ways. But they went on all that day, mile after mile, through wood and thicket, until at last they came to the chalk land, open grass with rare woods of beech, and the hirch growing near water, and they saw the Wealden mountains nearer, and groups of horses grazing together. They went circumspectly, keeping always near thicket and cover, for this was a strange region -even its ways were strange. Steadily the ground rose, until the chestnut forests spread wide and blue below them, and the Thames marshes shone silvery, high and far. They saw no men, for in those days men were still only just come into this part of the world, and were moving but slowly along the riverways. Towards evening they came on the river again, but now it ran in a gorge, between high cliffs of white chalk that sometimes overhung it. Down the cliffs was a scrub of birches and there were manybirds there. And high up the cliff was a little shelf by a tree, whereon they clambered to pass the night.

"HEY had had scarcely any food; it was not the time of year for berries, and they had no time to go aside to snare or waylay. They tramped in a hungry weary silence, gnawing at twigs and leaves. But over the surface of the cliffs were a multitude of snails, and in a bush were the freshly laid eggs of a little bird, and then Ugh-lomi threw at and killed a squirrel in a beech-tree, so that at last they fed well. Ugh-lomi watched during the night, his chin on his knees; and he heard young foxes crying hard by, and the noise of mammoths down the gorge and the hyænas velling and laughing far away. It was chilly, but they dared not light a fire. Whenever he dozed, his spirit went abroad, and straightway met with the spirit of Uya, and they fought. And always Ugh-lomi was paralysed so that he could not smite nor run, and then he would awake suddenly. Eudena, too, dreamt evil things of Uya, so that they both awoke with the fear of bim in their hearts, and by the light of the dawn they saw a woolly rhinoceros go blundering down the valley

During the day they carceled one another and very field of the sumfain, and lowing hey was so very field of the sumfain, and lowing hey was so read finas atoking out of the ciff face, protection ator he had acces, and he dragged some is he had been ator and the source of the source of the lowing source of the source of the source of the lowing source of the source of the source of the heit factors the source of the heit factors at this foodbal first, the eight work is been at the source of the source of the source of the been at the source of the source of the source of the been at the source of the source of the source of the been at the source of the source of the source of the been at the source of the source of the source of the been at the source of the source of the source of the been at the source of the source of the source of the been at the source of the source of the source of the been at the source of the source of the source of the source of the been at the source of the source of the source of the source of the been at the source of t

turny, retrike introns, and for a time Uglobani dity more prestry area to both the shing. If was as if it shows and the shing of the shows a start it shows and presented that the scale variant of the set of shings and the shows a start of the shift of the start of the start of the start of the shift of the start of the start of the shift of the shift.

That night they made a fire from flint sparks and bracken fronds, and talked and caressed by it. And in their sleep Uva's spirit came again, and suddenly, while Ugh-lomi was trying to fight vainly, the foolish flint on the stick came into his hand, and he struck Uya with it, and behold ! it killed him. But afterwards came other dreams of Uya-for spirits take a lot of killing, and he had to be killed again. Then after that the stone would not keep on the stick. He awoke tired and rather gloomy, and was sulky all the forenoon, in spite of Eudena's kindliness, and instead of hunting he sat chipping a sharp edge to the singular flint, and looking strangely at her. Then he bound the perforated flint on to the stick with strips of rabbit skin. And afterwards he walked up and down the ledge, striking with it, and muttering to himself, and thinking of Uya. It felt very fine and heavy in the hand.

Several days, more than there was any counting in these days, it was the days, it may be, or six, did Ughlomi and Eudems any on that shell in the gonge of the river, and they lost all lear on men, and their fire burnt really of a night. And they were very a water, and no enremise. Eudems knew was well in a couple of days, for those ancient savage had publich-healing fleebs. Indeed, they were very happy.

"On one of those day: Uph-loni dropped a churk of finit over the Cill. He saw it fall, and go bounding across the river bank into the river, and after haughng and thinking i over a little the triod autofarting way. They special althe normality dropping stores from the ledge, and in the atternson they discovered from the ledge work. "The next day they had forgorten this delight. Or at least, it seemed they had forgotten.

But Tuya came in dremas to spoil the particles. Three enjois more and fighting Uldowin. In the Three enjois more fighting Uldowin the second statistical particles are specificated and the second statistical constraints with an and dark three the second statistical constraints with a second statistical st

Two days and nights did Eudena sit alone by the fire on the ledge waiting, and in the night the beasts howled over the cliffs and down the valley, and on the cliff over against her the humched hyemas prowled black against the sky. But no evil thing came near her save (ear. Once, far away, she heard the roaring of a lion, following the horses as they came northward over the grass lands with the spring. All that time ske waited—the waiting that is pain.

And the third day Ugh-lomi came back, up the river. The plumes of a raven were in his hair. The first axe was red-stained, and had long dark hairs upon it, and be carried the necklace that had marked the favourite of Uya in his hand. He walked in the soft places, giving no heed to his trail. Save a raw cut below his jaw there was not a wound upon him. "Uva !" cried Ugh-lomi exultant, and Eudena saw it was well. He put the necklace on Eudena, and they ate and drank together. And after eating he began to rehearse the whole story from the beginning, when Uya had cast his eyes on Eudena, and Uva and Ugh-lomi, fighting in the forest, had been chased by the bear, eking out his scanty words with abundant pantomime, springing to his feet and whirling the stone axe round when it came to the fighting. The last fight was a mighty one, stamping and 'houting, and once a blow at the fire that sent a torrent of sparks up into the night. And Eudena sat red in the light of the fire, gloating on him, her face flushed and her eyes shining, and the necklace Uya had made about her neck. It was a splendid time, and the stars that looked down on us looked down on her, our ancestor-who has been dead now these fifty thousand years.

#### CHAPTER II

#### The Cave Bear

N the days when Eudena and Ugh-lomi fled from the people of Uva towards the fir-clad mountains of the Weald, across the forests of sweet chestnut and the grass-clad chalk land, and hid themselves at last in the gorge of the river between the chalk cliffs, men were few and their souattingplaces far between. The nearest men to them were those of the trihe, a full day's journey down the river, and up the mountains there were none. Man was indeed a newcomer to this part of the world in that ancient time, coming slowly along the rivers, generation after generation, from one squatting-place to another, from the south-westward. And the animals that held the land, the hippopotamus and rhinoceros of the river valleys, the horses of the grass plains, the deer and swine of the woods, the grey apes in the branches, the cattle of the uplands, feared him but little-let alone the mammoths in the mountains and the elephants that came through the land in the summer-time out of the south. For why should they fear bim, with but the rough, chipped flints that he had not learnt to haft and which he threw but ill, and the poor spear of sharpened wood. as all the weapons he had against boof and horn. tooth and claw

Andoo, the huge cave hear, who lived in the cave up the gorge, had never even seen a man in all-his wise and respectable life, until midway through one night, as he was prowing down the gorge along the cliff edge, he saw the glare of Eadena's fire upon the ledge, and Eudena red and shining, and Ughlomi, with a gignatic shadow mocking him upon the white cliff, going to and fro, shaking his mane of bair, and waving the axe of stome—the first axe of stome—while he chanted of the killing of Uya. The cave bear was far up the gorge, and he saw the thing slanting-ways and far off. He was so surprised he stode quite still gone the edge, snifting the novel odour of barrning bracken, and wondering whether the dawn was Coming up in the wrone place.

It is use the lard of the röcks and caves, was the cost form, as has singlene broker, which generatly use form—the line of those days was displated—was low of the thore-those they was displated—was low of the thore-those they was displated by the form, now prevent on him, and none gave him lattice there more prevent on him, and none gave him lattice the more three costs and the set of the set of the there interactions and has cost in the set of the period of him. He come alony along the brow "of the cliff browth then, showing three to suffit and peers and browth then, showing three to suffit and peers and byernas also were so intent upon the thing below the advance, comes along the sufficient of the sufficient the sufficient of the sufficient value of the sufficient sufficient of the sufficient sufficient of the sufficient of the sufficient of the sufficient sufficient of the sufficient of the sufficient of the sufficient sufficient of the sufficient

"Who answers the hyana?" growled Andoo, peering through the midnight dimness at them, and then going to look at the cliff edge.

There was Ugh-lomi still telling his story, and the fire getting low, and the scent of the burning, hot and strong,

Autoo stead on the edge of the duals eith forms for to some time, shifting his wast weight from foot to foot foot and weight his basic to and from with his model of his high histor states and the source of the source one, was the cave hear, more carious han any of the learns that live town, and the filtering first and the intruduction into his independent province, sittered the intruduction into his independent province, sittered had hear after red deer farm that night, for the had hear after retering encounter the state of the source of the transferred state carepoints.

"Ya-bit "Yelfot the lyvenia behind. "Ya-bit any Pereing through the strictlyk Abodies saw therewere now these of how reliefs to and for against the the night... will be a strictlyk Abodies. "Fifth of the world?" And mainly to amory there, he resolved to saw the red rift diver in the agree und life down a time they vanished, and he heard their voles, like a party of Codeny benefasters, away in the ketchwoods. Then they came sileking near again. Abodie used, Line they came sileking near again. Abodie used, Line the scored and vert had. . It was a splendid night, beset with shining constellations, the same stars, but not the same constellations we know, for since those days all the stars have had time to move into new places. Far away across the open space beyond where the heavyshouldered, lean-bodied hysenas blundered and howled, was a beech-wood, and the mountain slopes rose beyond, a dim mystery, until their snow-capped summits came out white and cold and clear, touched by the first rays of the yet unseen moon. It was a vast silence, save when the yell of the hytenas flung a vanishing discordance across its pence, or when from down the hills the trampeting of the new-come elephants came faintly on the faint breeze. And below now, the red flicker had dwipdled and was steady, and shone a deeper' red, and Ugh-lomi had finished his story and was preparing to sleep, and Eudena sat and listened to the strange voices of unknown beasts, and watched the dark eastern sky growing deeply luminous at the advent of the moon. Down below, the river talked to itself, and things unseen went to and fro.

After a-time the bear went away, but in an hour he was back again. Then, as if struck by a thought, he turned, and went up the gorge. . . .

The second secon

Suddenly she started up from her squatting position, erect and alert, scrutinising the cliff up and down.

She nade the faintest sound, and Ugh-Iomi too, light-steeping like an animal, was instantly awake. He caught up his axe and came noiselessly to her side.

The light was still dim, the world now all in black and dark grey, and one sickly star still impered overhead. The ledge they were on was a little grassy space, six feet wide, perhaps, and twenty feet long, sloping outwardly, and with a handful of St. John's wort growing near the edge. Below it the soft, white rock fell away in a steep slope of nearly fifty feet to the thick bush of hazel that fringed the river. Down the river this slope increased, until some way off a thin grass held its own right up to the crest of the cliff. Overhead, forty or fifty feet of rock bulged into the great masses characteristic of chalk, but at the end of the ledge a gully, a precipitous groove of discoloured rock, slashed the face of the cliff, and gave a footing to a scrubby growth, by which Eudena and Ugh-lomi went up and down.

They stood as noiseless as startled deer, with every sense expectant. For a minute they heard nothing, and then came a faint ratiling of dust down the gully, and the creaking of twigs.

Ugh-lomi gripped his axe, and went to the brow

of the logg, for the balls of the dath overhead that balled the upper part of the gally. And forthwith, we a solar contraction of the barry, he sees which are a particle contraction of the barry, he sees that a galaxy barry barry of the solar barry of the solar solar solar solar barry of the solar barry barry of the see as found as the solar barry the less in form the solar solar barry of the length of the barry transformers, and has found as your to barry barry barry of the solar barry of the solar barry barry barry of the solar barry barry barry barry barry the barry to barry the solar barry barry barry barry barry the barry barry barry barry barry barry barry barry barry the barry barry barry barry barry barry barry barry barry the barry barry barry barry barry barry barry barry the barry barry barry barry barry barry barry barry the barry barry barry barry barry barry barry barry the barry bar

He got his footing, and came down slowly, a yard nearer.

"Bear," said Ugh-lomi, looking round with his face white.

But Eudena, with terror in her eyes, was pointing down the cliff.

Ugb-lomi's mouth fell open. For down below, with her big fore-feet against the rock, stood another big brown-grey bulk-the she-bear. She was not so big as Andoo, but she was hig enough for all that.

Then suddenly Ugh-lomi gave a cry, and catching up a handful of the litter of ferns that lay seattered on the ledge, he thrust it into the pallid ash of the fire. "Brother Fire!" be cried, "Brother Fire!" And Budena, starting into activity, did likewise. "Brother Fire! Help, help! Brother Fire!"

Brother Fire was still red in his heart, but he turned to grey as they scattered him. 'Drother Fire?' they screamed. But he whispered and passed, and there was anothing but askes. Then Ugh-lowi dataced with anger and struck the askes with his fatbut Eaken began to largneet the firetone equisits and the structure of the structure equisits again towards the gully by which Andro was climbing down. Brother Fire!

SUDDENLY the huge furry hind-quarters of the bear came into view, beneath the hadge of the chalk that had hidden him. He was still clambering gingerly down the nearly vertical surface. His head was yet out of sight, but they could hear him talking to binself. "Flg and monkey," said the cave hear. "In ought to be good."

Enderta struck a spark and blow at it; it twinkled brighter and them-went out. At that whe cast down fint and firstone and stared blankly. Then she e sparag to nee feet and scrambler a yard or so up the call above the ledge. How she hung on even better hand with do ney forway, for the chilk wate or the start of the start of the start of the start better hand with do ney forway, for the chilk wate of seconds she had shill back to the ledge again with bleening hands.

Ugh-lomi was making framie rushes about the ledge-now he would go to the edge, now to the guly. He did not know what to do, he could not think. The she-bear looked waniler than her mate-match. If they rushed down on her together, one might live. "Ugh?" said the care bear, and Ughlomi turned again and saw his little cyres peering under the buge of the chalk.

Eudena, cowering at the end of the ledge, began to scream like a gripped rabbit.

At that a sort of madness came upon Ugh-lomi. With a mighty cry, he caught up his axe and ran towards Andoo. The monster gave a grunt of surprise. In a moment Ugh-lomi was clinging to a bush right undernearb the bear, and in another he was hanging to its back half buried in fur, with one fist clutched in the hair under its jaw. The bear was too astonished at this fantastic attack to do more than ching passive. And then the axe, the first of all axes, rang on its skull.

The hear's head twisted from side to side, and he began a petulant scolding growt. The axe bit within an inch of the left eye, and the hot blood blinded that side. At that the brute reared with surprise and anger, and his teeth grashed is in unless from Ugh-Iom's face. Then the axe, chubbed close, came down heavily on the corner of the jaw.

The next blow binned the right side and called forth a roar, this time of pain. Eudeaa saw de huge, fat feet slipping and sliding, and suddenly the bear gave a chunxy kap sideway, as if for the ledge. Then everything vanished, and the hazels smashed, and a roar of pain and a tunnult of shouts and growls came up from far below.

Endera screamed and ran to the edge and percet over. For a moment, man and bears were a heap together, Ugh-lomi uppermost; and then he had sprung clear and was scaling the guily again, with the bears relifing and striking at one another among known of the striking and service and the striking at the striking and striking at one another among known of the striking at the striking at the striking striking at the striking at the striking down his thigh. "Up!" he cricd, and in a moment Edema was leading the way to be to po of the cfift.

In half a minite they were at the crest, their hearts pumping noisily, with Audoo and his wite far and safe blow them. Androw was sitting on his haunches, how have a straight on the hindress out of his years both paws at the bindress out of his years rathfed in appearance and growing america, 'Ucllomi fung himself fat on the grass, and kay panting and bleecing with his face of his arms.

For a second Eudena regarded the bears, then she came and sat beside him, looking at bim. . .

Presently she put forth her hand timidily and touched him, and made the guitural sound that was his name. He turned over and raised himself on his arm. His face was pale, like the face of one who is afraid. He looked at her steadfastly for a moment, and then suddenly he laughed. "Waught" he said exclusiontly.

"Waugh !" said she-a simple but expressive conversation.

Then Ugb-bomi cause and kneth beside her, and on hands and knees perced over the how and ecamined the gorge. His breath was steady now, and the block on his lay that a cease it to flow, though the He signited up and ast starting at the footmarks of the gravit bars as they cause to the gully—they were as wide as his head and twice as long. Then he langed up and wert along the cliff face until the kdge was visible. Here he sat down for journe time saw the longs had equeen.

At has Ugh-loom rose, as one whose mind is made up. He returned towards the gully. Eudenk keeping close by him, and together they clambered to the ledge. They took the firstone and a fifth, and then Ugh-loom went down to the foot of the diff very cautiously, and found his axe. They returned to the diff as quietly as they could, and set off at a brick walk. The ledge was a home no longer, with such callers in the neighbourhood. Ugh-lomi carried the axe and Eudena the firestone. So simple was a Palæolithic removal.

THEY went up-stream, although it might lead to the very lair of the cave bear, because there was no other way to go. Down the stream was the tribe, and had not Ugh-lomi Milet Uya and Wau? By the stream they had to keep—because of drinking.

So they margicle through beech trees, with the googne description until the river Howed, a frohtingmapid, first hundred fort below them. Of all the changelul things in this world of change, the courses of rivers in deep valleys change least. It was the river Way, the viery we know to eddy, and they matched over the very spoke where nowadays that beings to crean; into the land. Over a gives up chartered and vanished, and all along the citil edge, vast and even, ran the spon of the grant cave bear.

And then the spoor of the bear fell away from the cliff, showing, Ugh-lomi thought, that he came from some place to the left, and keeping to the cliff's edge, they presently came to an end. They found themselves looking down on a great semi-circular space caused by the collapse of the cliff. It had smashed right across the gorge, banking the up-stream water back in a pool which overflowed in a rapid. The slip had happened long ago. It was grassed over, but the face of the cliffs that stood about the semicircle was still almost fresh-looking and white as on the day when the rock must have broken and slid down. Starkly exposed and black under the foot of these cliffs were the mouths of several caves. And as they stood there, looking at the space, and disin-clined to skirt it, because they thought the bears' lair lay somewhere on the left in the direction they must needs take, they saw suddenly first one bear and then two coming up the grass slope to the right and going across the amphitheatre towards the caves. Audoo was first; he dropped a little on bis fore-foot and his mien was despondent, and the she-bear came shuffling behind.

He lay still, like a barked log, sun-dappled, in the shadow of the trees. He was thinking. And Euders had learnt, even when a little grid, that when Ugh-lomi became still like that, jawbone on fist, novel things presently began to happen.

It was an hour before the thinking was over; it was noon when the two little swages: had found their way to the chiff brow that overhame the bars? see. And all the long afternoon they fought desperately with a great boulder of chalk; trundling it, with nothing but their maided sturky muscles, from the gully where it had hung like a loose tooth, towards the cliff too. It was full two yards about it stood as high as Eudena's waist, it was obtuseangled and toothed with flints. And when the sun set it was poised, three inches from the edge, above the cave of the great cave bear.

In the cave conversation languished during that afternoon. The she-bear snoozed sulkily in her corner-for she was fond of pig and monkey-and Andoo was busy licking the side of his paw and smearing his face to cool the smart and inflammation of his wounds. Afterwards he went and sat just within the mouth of the cave, blinking out at the afternoon sun with his uninjured eye, and thinking.

"I never was so startled in my life," he said at "They are the most extraordinary beasts. Atlast. tacking mer

"I don't like them," said the she-hear, out of the darkness behind

A feebler sort of beast I never saw. I can't think what the world is coming to. Scraggy, weedy legs, . . . Wonder how they keep warm in winter? "Very likely they don't," said the sbe-bear.

"I suppose it's a sort of monkey gone wrong."

"It's a change," said the she-bear.

A pause.

"The advantage he had was merely accidental," said Andoo, "These things will happen at times."

"I can't understand why you let go," said the shebear.

THAT matter had been discussed before, and settled. So Andoo, being a bear of experience, remained silent for a space. Then he resumed upon a different aspect of the matter. "He has a sort of claw-a long claw that he seemed to have first on one paw and then on the other. Just one claw, They're very odd things. The bright thing, too, they seemed to have-like that glare that comes in the sky in daytime-only it jumps about-it's really worth seeing. It's a thing with a root, too-like grass when it is windy."

"Does it bite?" asked the she-bear. "If it bites it can't be a plant."

"No-I don't know," said Andro, "But it's curious, anyhow."

"I wonder if they are good eating?" said the shebear

"They look it," said Andoo, with appetite-for the cave bear, like the polar bear, was an incurable carnivore-no roots or honey for him.

The two hears fell into a meditation for a space. Then Andoo resumed his simple attentions to his eye. The sunlight up the green 'slope before the cave mouth grew warmer in tone and warmer, until it was a ruddy amber.

"Curious sort of thing-day," said the cave bear. "Lot too much of it, I think. Onite unsuitable for hunting. Dazzles me always. I can't smell nearly so well by day."

The she-bear did not answer, hut there came a measured crunching sound out of the darkness. She had turned up a hone. Andoo vawned. "Well," be said. He strolled to the cave mouth and stood with his head projecting, surveying the amphitheatre. He found he had to turn his head completely round to a queer sound, a little like the shout of a hyana but see objects on his right-hand side. No doubt that eye would be all right to-morrow.

He yawned again. There was a tap overhead, and a big mass of chalk flew out from the cliff face.

dropped a vard in front of bis nose, and starred into a dozen unequal fragments. It startled him extremely

When he had recovered a little from his shock, he went and sniffed curiously at the representative pieces of the fallen projectile. They had a distinctive flavour, oddly reminiscent of the two drab animals of the ledge. He sat up and pawed the larger lump, and walked round it several times, trying to find a man about it somewhere. . .

When night had come he went off down the river gorge to see if he could cut off either of the ledge's occupants. The ledge was empty, there were no signs of the red thing, but as he was rather hungry he did not loiter long that night, but pushed on to pick up a red deer fawn. He forgot about the drab animals. He found a fawn, but the doc was close by and made an ugly fight for her young. Andoo had to leave the fawn, but as her blood was up she stuck to the attack, and at last he got in a blow of his paw on her nose, and so got hold of her. More meat hut less delicacy, and the she-bear, following, had her share. The next afternoon, curi-ously enough, the very fellow of the first white rock fell, and smashed precisely according to precedent.

The aim of the third, that fell the night after, however, was better. It hit Andoo's unsoeculative skull with a crack that echoed up the cliff, and the white fragments went dancing to all the points of the compase. The she-bear coming after him and sniffing curiously at him, found him lying in an odd sort of attitude, with his head wet and all out of shape. She was a young she-bear, and inexperienced, and having sniffed about him for some time and licked him a little, and so forth, she decided to leave bim until the odd mood had passed, and went on her hunting alone.

She looked up the fawn of the red doe they had killed two nights ago, and found it. But it was lonely hunting without Andoo, and she returned caveward before dawn. The sky was grey and overcast, the trees up the gorge were black and unfamiliar, and into her ursine mind came a dim sense of strange and dreary happenings. She lifted up her voice and called Andoo by name. The sides of the gorge reechoed her.

As she approached the caves she saw in the half light, and heard a couple of jackals scuttle off, and immediately after a hyzena howled and a dozen clumsy bulks went lumbering up the slope, and stopped and yelled derision, "Lord of the rocks and caves-ya-ha!" came down the wind. The dismal feeling in the she-bear's mind became suddenly acute. She shuffled across the amphitheatre

"Ya-ha!" said the hyænas, retreating, "Ya-ha!" The cave hear was not lying quite in the same attitude, because the hyænas had been busy, and in one place his ribs showed white. Dotted over the turf about him lay the smashed fragments of the three great lumps of chalk. And the air was full of the scent of death.

The she-bear stopped dead. Even now, that the great and wonderful Andoo was killed was beyond her believing. Then she heard far overhead a sound, fuller and lower in pitch. She looked up, her little dawn-blinded eyes seeing little, her nostrils quivering. And there, on the cliff edge, far above her against the bright pink of dawn, were two little shaggy round dark things, the heads of Eudena and Ugh-Jomi, as they shouted derision at her. But though she could not see them very distinctly she could hear, and dimly she began to apprehend. A novel feeling as of imminent strange evils came into her heart.

She began to examine the smashed fragments of chalk that lay about Andoo For a space she stood still, looking about her and making a low continous sound that was almost a moon. Then she went hack incredulously to Andoo to make one last effort to rouse him.

#### CHAPTER III

#### The First Horseman

N the days before Ugh-komi there was little trouble between the horses and men. They lived apart-the men in the river swamps and thickets, the horses on the wide grassy uplands hetween the chestnuts and the pines. Sometimes a potry would come straying into the clogging marshes to make a flint-backed meal, and sometimes the tribe would find one, the kill of a lion, and drive off the jackals, and feast heartily while the sun was high. These horses of the old time were clumsy at the fetlock and dun-coloured, with a rough tail and high head. They came every spring-time north-westward into the country, after the swallows and before the hippopotami, as the grass on the wide downland stretches grew long. They came only in small hodies thus far, each herd, a stallion and two or three mares and a foal or so, having its own stretch of country, and they went again when the chestnut-trees were yellow and the wolves came down the Wealden mountains

It was their custom to graze right out in the open, going into cover only in the heat of the day. They avoided the long stretches of thorn and heechwood, preferring an isolated group of trees void of amhuscade, so that it was hard to come upon them. They were never fighters; their heels and teeth were for one another, but in the clear country, once they were started, no living thing came near them, though perhaps the elephant might have done so had he felt the need. And in those days man seemed a harmless thing enough. No whisper of prophetic intelligence told the species of the terrible slavery that was to come, of the whip and spur and bearing-rein. the clumsy load and the slippery street, the insufficient food, and the knacker's yard, that was to replace the wide grass-land and the freedom of the earth

Down in the Wey marshes Uigh-holi and Eadean that never some this howes closely, how they are well and never some the howes closely, how you do not marked of look. They had returned to the elder marked of look. They had returned to the elder were not afraid. The static has a backman they were not afraid. The static has a backman they were not afraid. The static has a backman they were not afraid. The static has a backman they were not afraid. The static has a backman they were not afraid. The static has a static has a first not a static has a static has a static has a static warms as its has many women could. She was indeed many first has a stary women could. She was indeed in a bask or could be reached in the above static has a bask or could be reached in the above static has of his, and she would stay heside him, with her bright eyes upon him, offering no irritating suggestions—as still as any man. A wonderful woman!

At the top of the diff was an open grassy lawn and then beckwoods, and going through the beckwoods one came to the edge of the rolling grassy expanse, and in sight of the horses. Here, on the sight of the signal signal signal signal signal barrows, and here among the fronds Easiers and Ugeh-toni would be with their throwing atoms reach, until the title people came out to nibble and play in the assues. And while Easiers awold sig a alient figure of watchfatess, regarding the horses, Ughat those wonder-fill graining stronger,

In a dim way he appreciated their grace and their supple nimbleness. As the sun detined in the verning-time, and the heat of the day passed, they would become achieve their means of the supplementation of the supplementation of the inground in great curves, sometimes as close that the ponning of the turf sounded like harried throuder. It tooled so fine that Ugb-lomi wanted to join in bally. Add sometimes one would roll over on the turf, kicking four hoofs herevenard, which leaving.

Dim imaginings ran through Ugb-iom's muta as be watched—by virtue of which two rabibs lived the longer. And skeping, his brains were clearer and holder—of that was the way in those days. He came near the borses, he dreamt, and (ought, amithe-game against hoof, but them the horses changed to men, or, at least, to men with hornes' heads, and he avoke in a cold sweat of teror.

Yet the next day in the morning, as the horses were graving, one of the marcs whinned, and they saw Ugh-lomi coming up the wind. They all stopped their easing and whiched him. Ugh-lomi was not coming towards them, but strelling obliquely across the open, looking at anything in the world least mat of his hair, giving him a remarkable appearance, and he walked very alowly. "What's up now?" said the Matter Horse, who was capable, but inexperienced.

"It looks more like the first half of an animal than anything else in the world," he said, "Forelegs and no hind."

"It's only oue of those pink monkey things," said the Eldest Mare. "They're a sort of river monkey. They're quite common on the plains."

Ugh-tomi continued his oblique advance. The Eldest Mare was struck with the want of motive in his proceedings.

"Fool !" said the Eldest Mare, in a quick conclusive way she had. She resumed her grazing. The Master Horse and the Second Mare followed suit.

"Look! he's nearer," said the Foal with a stript.

One of the younger feals made untary movements. Ugh-loan isquited down, and ast regarding the horses fixedly. In a little while he was 'autiside that they mean neither flight not hostilities. He hegan to consider his next procedure. He did not feel and/ous to kill, but he had his acc with him, and the print of sport was upon him. How would one the print of sport was upon him. How would one creatures! E UDENA, watching him with a farful admiration from the over of the bracken, as whin presently go on all fours, and so proceed again. But the horses perferred him a bigot to a quadruped, and the Master Horse three up his head and gave the word to move. Ugh hout itoogit they were off for good, but after a manut's gallop they came Then, as a rise in the ground hid him, they tailed out, the Master Horse leading, and approached him spirally.

He was as ignorant of the possibilities of a horse as they were of his. And at this stage it would seem he funked. He knew this kind of stalking would make red deer or buffalo charge, if it were persisted in. At any rate Eudens as whin jump up and cone walking towards her with the fern plumes held in his hand.

She stood up, and he grinned to show that the whole thing was an immense lark, and that what he had done was just what he had planned to do from the very beginning. So that incident ended. But he was very thoughful all that day.

The next day this foolish drah creature with the leonine mane, instead of going about the grazing or hunting he was made for, was prowling round or numming ne was made tor, was prowing round the horses again. The Eldest Mare was all for silent contempt. "I suppose he wants to learn some-thing from us," she said, and "Let him." The next day he was at it again. The Master Horse decided he meant absolutely nothing. But as a matter of fact, Ugh-lomi, the first of men to feel that curious spell of the horse that binds us even to this day, meant a great deal. He admired them unreservedly. There was a rudiment of the snoh in him, I am afraid, and he wanted to he near these heautifullycurved animals. Then there were vague concep-tions of a kill. If only they would let him come near them! But they drew the line, he found, at fifty yards. If he came nearer than that they moved off-with dignity. I suppose it was the way he had blinded Andoo that made him think of leaping on the back of one of them. But though Eudena after a time came out in the open too, and they did some unohtrusive stalking things stopped there.

Then one memorials day a new idea came to Uphbomi. The toose looks down and level, but the does not look up. No animals look up.—they have too meads commonseries. It was only that Uphbo for meads commonseries. It was only that Uphbo loni made no philosophical deductions, but the perceeded the thing was to. So he spent as ward ydu in a heech that steod in the open, while Eudema stakled. Usually the hores went into the shade in the heat of the alternoon, but that day the sky was solitenide.

It was two days later that Ugh-lami had his desire. The day was blazing bot, and the multiplying files asserted themselves. The horses stopped grazing before mid-day, and came into the shadow below him, and stood in couples nose to tail, flapping.

The Master Horse. In virtue of his helds, came closest to the tree. And audenly there was a rustle and a creak, a *lhad*, . . Then a sharp chipped fifth this inim on the check. The Master Horse stumbled, came on one hence, rose to his feet, and was off like the wind. The air was full of the whirl of limba, the orance of boofs, and shorts of alarm. Urb-homi was pitched a foot in the air, came down again, bis again, his stomach was hit violently, and then his knees got a grip of something between them. He found binnelf clutching with knees, feet, and hands, careering violently with extraordinary oscillation through the air—his axe gone heaven knows withiter. "Hold tight," said Mother Instinct, and he did.

He was aware of a lot of cearse hair in his face, some of it hetween his teeth, and of green turf streaming past in front of his eyes. He saw the shoulder of the Master Horse, vas and sleek, with the muscles flowing swiftly under the skin. He perceived that his arms were round the neck, and that the violent ierkings he experienced had a sort of rhythm.

Then he was in the midst of a wild rush of treestoms, and then there were fromts of bracken about, and then more open turf. Then a stream of pelbes rushing peak. Ithit pelokies drying wildways athwart the stream from the blow of the swith hoofs, Upth-omi began to feel frightfully side and giddy, but he was not the stuff to leave go simply because he was uncontrable.

He dared not leave his grip, hus he tried to make himself more comfortable. He released his hug on the neck, gripping the mane instead. He slipped his knees forward, and pushing back, came into a sitting position where the quarters broaden. It was nervous work, but he managed it, and at last he was tain, but with that frightful pounding of his lody at any rate relieved.

$$\begin{split} & S_{\rm c} UMU the fragments of Ugb-load's mind age into order again. The pace sense to him terrifie, hat a kind of excutation was beginning to ous and was been the row of the transmission of the transmi$$

Then came a wide space dappled with frying failow deer scattering this way such that, and then a comple of jackala, mistaking Ugh-hemi for a loon, course harvying at leid han. And wire they save it was galaged the horse, with his one iden of except, and after him the jackala, with pricked areas and quicklybarked remarks. "Which hills which?" said the first ipstal. It's the horse ideng killed?" and the first ipstal. They appear the horse ideng killed?" and the proof. They gave the hord of following, and the horse apspar. It is a factor surverse increasing the same startes of the same start of the same start of the same start same start.

On they ranked, a little tormado through the quiet day, patring up started birds, sensing a dozen unexpected things daring to cover, raising a myriad of indigurat dangeffes, smassing little Mossone Trees again, and then yabah, sphah across a torrent; then a have shot out o i a tuti of grass under the very hoofs of the Master Horse, and the jackals left them incominently. So presently they brucks into the open again, a wide expanse of turfy hilloide—the very her from the frame and the incode and non-verdays frame the Ensem Shot. The first hot bolt of the Master Horse was long sloce over. He was falling into a measured trot, and Ugh-lomi, albeit bruised exceedingly and quite uncertain of the future, was in a state of glorious enjoyment. And now came a over development. The pace broke again, the Master Horse came round on a short curve, and stoneed dead.

Ugh-loni became alert. He wished he had a flint, but the throwing flint he had carried in a thong about his waist was-like the axe-heaven koows where. The Master Horse turned his head, and Ugh-lomi became aware of an eve and teeth. He whipped his leg into a position of security, and hit at the check with his fist. Then the head went down somewhere out of existence appareotly, and the back he was sitting on flew up into a dome. Ugh-lomi became a thing of instinct agaio-strictly prehensihle; he held by knees and feet, and his head seemed sliding towards the turf. His fingers were twisted into the shock of mane, and the rough hair of the horse saved him. The gradient he was on lowered again, and then-"Whup!" said Ush-lomi astonished, and the slant was the other way up. But Ugh-lomi was a thousand generations nearer the primordial than man; no monkey could have held on better. And the lion had been training the horse for countless generations against the tactics of rolling and rearing back. But he kicked like a master, and buck-iumptd rather neatly. In five minutes Ugh-lomi lived a lifetime. If he came off, the horse would kill him, he felt assured

Then the Masive Horse decided to site to his ofd the mass again and subjects worth off at a paper, if is entropy to the start of the start of the start of the rank, averying polither to the right nor to the left, and they right own the work capacity of the start of the start of the start of the start of the of oak and huwdhors. They altered a sudden hildhor of oak and huwdhors. They altered a sudden hildhor while. The start of the start of the left camp of the start of the start of the start of the start haller, and on the right-hand alte and the left camp balance. The start with balance thickees and going labels the passing rice, and where and the start of the label of the passing rice, and labe for the the way operated again.

AND then came a wooderful adventure. A sud-den squeal of unreasonable anger rose amidst the bushes, the squeal of some creature bitterly wronged. And crashing after them appeared a big, grev-blue shape. It was Yaaa the hig-horned rhinoceros, in one of those fits of fury of his, charging full tilt, after the manner of his kind. He had been startled at his feeding, and someone, it did not matter who, was to be ripped and trampled therefore. He was bearing down on them from the left, with his wicked little eve red, his great horn down and his tail like a jury-mast behind him. For a minute Ugh-lomi was minded to slip off and dodge, and then hehold! the staccato of the hoofs grew swifter, and the rhinoceros and his stumpy hurrying little legs seemed to slide out at the back corner of Ughlomi's eye. In two minutes they were through the bushes of May, and out in the open, going fast. For a space he could bear the ponderous paces in pursuit receding behind him, and then it was just as if Yasa had not lost his temper, as if Yaaa had never existed.

The pace never faltered, on they rode and on.

Ugh-lomi was now all exultation. To exult in those days was to insult. "Ya-ha! big nose!" he said, trying to crane back and'see some remote speck of a pursuer. "Why don't you carry your smitingstome in your fist?" he ended with a frantic whoop.

But that whoop was unfortunate, for coming close to the ear of the horse, and being quite unexpected, it startled the stallion extremely. He shifed violently, Ugh-lomi suddenly found himself uncomfortable again. He was hanging on to the horse, he found, by one arm and one knee.

The rest of the ride was houserable but unpleasant. The view was chiefly of blue sky, and that was comhined with the most unpleasant physical sensations. Finally, a busb of thorn lashed him and he let go.

<sup>1</sup>Fe hit the ground with its check and shoulder, and then, after a complexited and extraordinarity regard movement, hit it again with the end of his backbone. He saw gathers and gatasks of light and colour. The ground scenned hourning about just like the hore head done. Then he found he was slitting on turf, six yards heyond the bash. In front of greener, and a number of human heings in the distance, and the horse was yoing round at a smart gallo quite a low word for bote right.

"The human beings where on the opposite side of the river, some sill in the water, but they were all training away is hard as they could go. The adverse boowly they careford for. For quite a simule Ughlion at regarding them in a purely spectracity with the level of the river, the total among the approximation of the start of the simulation of the sing up to Havven, were all perfectly familiar to him. It was the sequitivity pales of the Some of Uga, of Uga from whom he had field with Eulerian and Ultil with the Hirr A.co.

He rose to his for, still danced from his fall, and as he fulls on the sattering fugitive structured and regracked linn. Same painted to the reselling lowest induced by the sattering fugitive structure of harding. He forgot the bares, he forgot his over hardins, in the growing interest of this encounter. There were (see or 0 them than there had beenthere were (see or 0 them than there had beenthere and the sattering of the sattering the sattering form for the night fare was not so high. By the filles here a base of the sattering the sattering of the bare had allow Vans. Sattering the same sattering backens ascend things remote things a forgate all.

He stopped at the bank and sood regarding the trib. His mathematical abilities were of the slightest, but it was certain there were fewer. The men might be away, but there were fewer women and childrea. He gave the shout of home-coming. His durred has lieven with Uya and Was-not with the durred has lieven with Uya and Was-not with the swered with his name, a little fearfully because of the strange way he had come.

For a space they spoke together. Then an old woman lifted a shrill voice and answered him. "Our Lord is a Lion."

Ugh-lomi did not understand that saying. They answered him again several together, "Uya comes again. He comes as a Lion. Our Lord is a Lion. He comes at night. He slays whom he will. But none other may slay us, Ugh-lomi, none other may slay us."

Still Ugh-lomi did not understand.

"Our Lord is a Lion. He speaks no more to men," Ugh-Jomi stood regarding them. He had had dreams—he knew that though he had killed Uya, Uya still existed, And now they told him Uya was a Lion.

The shrivelied old woman, the matterss of the first-minders, suddenly turned and spoke softy to those next to her. She was a very old woman indeed, she had been the first of USys where, and the second's a woman should be permitted to live. She had here cuming from the first, cuming to please Uya and to get food. And now she was great in commel. She speede softly, and Ugh-homi watches distance. Therefore and and the second second distance. Therefore and all all soft "from ever to us, distance.

A GIRL suddenly lifted up her voice. "Come over to us, Ugh-Iomi," she said. And they all began crying, "Come over to us, Ugh-Iomi."

It was strange how their manner changed after the old woman called,

He stood quite still watching them all. It was pleasant to be called, and the girl who had called first was a pretty one. But she made him think of Eudena.

"Come over to us, Ugh-Iomi," they cried, and the voice of the shrivelled old woman rose above them all. At the sound of her voice his besitation returned.

He mode on the river bank. Ugb-hom-i-Ugh the Director-with Manageds about the case asserted to Director-with Manageds about the case asserted to the second second second second second second mediate to the second second second second second and without back towards the distant there steen, the except has backmars. The original second second second and without back towards the distant there seen, the second second second second second second second and without back towards the second second second terms of these two exceptions the second second second terms of these two exceptions are second second second back, letters this feer a stopped him. They saw him top occur more any subsidiery second second second second back second second subsidiery second secon

Then all the women and children lifted up their voices together, and called to him in one last vain effort.

Far down the river the reads were stirring in the breeze, where, convenient for his new sort of feeding, the old lion, who had taken to man-eating, had made his lair.

The old woman turned her face that way, and pointed to the bawthorn thickets. "Uya," she screamed, "there goes thine enemy! There goes thine enemy, Uya! Why do you devour us nightly? We have tried to snare him! There goes thine enemy, Uya !?

But the lion who preyed upon the tribe was taking his siests. The cry went unheard. That day he had dined on one of the plumper girls, and his mood was a comfortable placidity. He really did not understand that he was Uya or that Ugh-lomi was his enemy.

So it was that Ugh-lomi rode the horse, and heard

first of Uya the lion, who had taken the place of Uya the Master, and was eating up the tribe. And as he lurried task to the gorge his mind was no longer full of the horse, but of the thought that Uya was still aive, to say or be shin. Over and over again he saw the shrunken band of women and children crying that Uya was a hion. Uya was a jion!

And presently, fearing the twilight might come upon him, Ugh-lomi began running,

#### CHAPTER IV

#### Uya the Lion

THE old lion was in heck. The tribe had a certain prior in their rules, that hat was all the very night that Ughshort killed Uru in the Carning, Woman, the first-minider, who first mand him Uya. A shower had lowered the first to a glow, and made the night dark. And as they conversel together, and percent at one nonvert in the first-sens, and wondered drams now that be was dead, they heard the momitic reverbergious of the lion's zure does at land.

Then everything was still. They held their brench, so that almost the only sounds were the patter of the rain and the bias of the raindrogs in the sabes. And then, after an interminable time, a crash, and a shriek of fear, and a growling. They sprang to their feet, shonting, scrasming, running this way and that, but brands would not kurn, and in a arimize the victim was being dragged away through the ferms. It was Irk, the brocher of Was,

So the lion came.

The ferns were still wet from the rain the next night, and he came and took Click with the red hair. That sufficed for two nights. And then in the dark between the moons he came three nights, night after night, and that though they had good fires. He was an old lion with stumpy teeth, but very silent and very cool; he knew of fires before; these were not the first of mankind that had ministered to his old age. The third night he came between the outer fire and the inner, and he leapt the flint heap, and pulled down Irm the son of Irk, who had seemed like to be the leader. That was a dreadful night, because they lit great flares of fern and ran screaming, and the lion missed his hold of Irm. By the glare of the fire they saw Irm struggle up, and run a little way towards them, and then the lion in two bounds had him down again. That was the last of Irm.

So fore came, and all the delight of spring passed or of their lives. All heads there were two sport out of the lives. All heads there were two sport out the number, Food-seeking became sprintless, nore heads the spring of the spring spring spring likes and the spring still new, and then it was the shrivelled old fireminder first bethought herseli in a dream of Rudena and Ugh-lomi, and of the way Uga had been shin. She had lived in fear of Uya all her days, and now she lived in fear of the lion. That Ugh-lomi could Kill Uga for good—Ugh-lomi whon she had seen born—was impossible. It was Uga still seeking his enemy!

And then eame the strange return of Ugh-tom; a wonderful animal seen galloping far across the river, that suddenly charged into two animals, a horse and a man. Following this portent, the vision of Ugh-tomi on the farther bank of the river, Ves, it was all plain to her. Uya was punishing them, hecause they bad not hunted down Ugh-tomi and Eudena,

The more same strangting back to the charces of the neutral while heats may sail global in the skywerst across the river with them and aboved them is apport heating on the fatther hand. Suss the theorem is a second of the sky strange of the Ugbbenni," cried the old woman, standing on the Ugbbenni," cried the old woman, standing on the theorem is a second of the sky strateging fitting to and fitto on the lowerhand of aperts, but does not Ugbbenni. Went be campot find E known E known and Ugbbenni. The sky strateging of the sky strateging the sky strateging of the sky strateging of the sky strateging strateging of the sky strategin

She turned to the distant reed-bed, as sometimes she had turned to Uya in his life. "Is it not so, my lord?" she cried. And, as if in answer, the tall reeds howed hefore a breath of wind.

Far into the twilight the sound of hacking was heard from the squatting-places. It was the men sharpening their ashen spears against the hunting of the morrow. And in the night, early before the moon rose, the lion came and took the girl of Siss the Tracker.

In the morning before the sun had risen, Sisa the Tracker, and the lad Waa-lau. Who now chipped finits, and One Eye, and Bo, and the suail-entre, the two red-haired men, and Car's-sisa and Snajke, all the men that were left alive of the Sons of Uya, taking their and sports and their antime-stones, and with throwing stones in the heast-gave bags, startled thorn thickets where Y and the Risinceros and has brothers were (reizing, and up the hare downland towards the breedwood).

That night the fires burnt high and fierce, as the waxing moon set, and the lion left the crouching women and children in peace.

And the next day, while the sun was still high, the hunters returned-all save One Eye, who lay dead with a smashed skull at the foot of the ledge.

When Ugh-iomi came back that evening from staking the horses, he found the valuers already busy over him. And with them the hunters brough Eachean bruised and wounded, but alive. That had been the strange order of the shrivelised dd woman, that she was to be brought alive—"She is no kill that she was to be brought alive—"She is no kill that she was to be brought alive—"She is no kill do came warve and droooning—her hair over her eyes and reatted with blood. They walked about her, and ever and again the Small-Eater, whose name she had given, would laugh and strike her with his spear, he would look over his shoulder like one who had size no poer. And after he had strike her with his spear, he would look over his shoulder like one who had size no voer blood head. The other's no. looked a harry save Eudem. When the old woman saw them coming, she eried aload with hov.

They musk Endera cross the river with her hands the database the current was stores, and when she digited the distance scenario, first with joy and they had dragged because a stores, and her stard stand for a time, allevit they take most and her takes and the stores and the stores. So they had regardly the store has a store of the store of the store store of the stores and the stores. So they they might do or say. All the trile cause down to they might do are say. All the trile cause down to store stores are stored as a store of the store at the store of the store of the store of the store of the store at the store of the store of the store of the store of the store at the store of the

The old woman tore off the necklase of Ugs that was also function's tock and put it on sites of the start and the start and the start start and the start and the start and the start are start backets' hair, and tock a spear from the hold rended the woman's of the bars, and be sho and bars how woman's of the bars, and when the hold rended the woman's of the bars still that for a nonzent the dd voman faced als was discussed and be face and languing and go discussed and part of the start and when the still was the start of bars again, and wort a little way off of a start of the start of the start of the start of the start of bars and the start of the start of the start of the start of bals and get at the start of the start of

The old woman had more words than any in the tribe And her talk was a terrible thing to hear. Sometimes the screamed and moaned incoherently, and sometimes the shape of her gutural cries was the mere phantem of thoughts. But the conversed to Eadman neverthetes, much of the things that were balance and the state of the things that were do her "And Ugh-lomi! Ifa, hat Ugh lomi is skin?"

And suddenly Eudena's eyes opened and she sat up again, and her look met the old woman's iair and level. "No," she said slowly, like one trying to remember, "I did not see my Ugh-lomi slain. i did not see my Ugh-lomi slain."

"Tell her," cried the old woman "Tell her-he that killed him. Tell her how Ugh-lomi was slain."

She looked, and all the women and children there looked, from man to man,

None answered ber. They stood shamefaced.

"Tell her," said the old woman. The men looked at one another.

Eudena's face suddenly lit.

"Tell her," she said. "Tell her, mighty men! Tell her the killing of Ugh-lomi."

The old woman rose and struck her sharply across ber mouth,

"We could not find Ugh-lomi," said Siss the Tracker, slowly. "Who hunts two, kills none."

Then Eudena's heart leapt, but she kept her face hard. It was as well, for the old woman looked at her sharply, with murder in her eyes.

Then the old woman turned her tongue upon the

men hecause they had feared to go on after Ughlomi. She dreaded no one now Uva was slain. She scolded them as one scolds children. And they scowled at her, and hegan to accuse one another. Until suddenly Siss the Tracker raised his voice and bade her hold her peace.

And so when the sun was setting they took Eudena and went-though their hearts sank within them-along the trail the old lion had made in the reeds. All the men went together. At one place was a group of alders, and here they hastily bound Eudena where the lion might find her when he came abroad in the twilight, and having done so they hurried back until they were near the squatting-place. Then they stopped. Sizs stopped first and looked back again at the alders. They could see her head. even from the squatting-place, a little black shock under the limb of the larger tree. That was as well.

All the women and children stood watching upon the crest of the mound. And the old woman stood and screamed for the lion to take her whom he sought, and counselled him on the torments he might do her

Eudena was very weary now, stunned by heatings and fatigue and sorrow, and only the fear of the thing that was still to come unheld her. The sun was broad and blood-red between the stems of the distant chestnuts, and the west was all on fire; the evening breeze had died to a warm tranquillity. The air was full of midge swarms, the fish in the river hard by would leap at times, and now and again a cockchafer would drone through the air. Out of the corner of her eye Eudena could see a part of the squattingknoll, and little figures standing and staring at her. And-a very little sound but very clear-she could hear the heating of the firestone. Dark and near to her and still was the reed-fringed thicket of the lair.

Presently the firestone ceased. She looked for the sun and found he had gone, and overhead and growing hrighter was the waxing moon. She looked towards the thicket of the lair, seeking shapes in the reeds, and then suddenly she began to wriggle and wriggle, weeping and calling upon Ugh-lomi.

But Ugh-lomi was far away. When they saw her head moving with her struggles, they shouted together on the knoll, and she desisted and was still, And then came the bats, and the star that was like Ugh-lomi crept out of its hlue hiding-place in the west. She called to it, hut softly, because she feared the lion. And all through the coming of the twilight the thicket was still.

S of the dark crept upon Eudena, and the moon grew hright, and the shadows of things that had fled up the hillside and vanished with the evening came back to them short and black. And the dark shapes in the thicket of reeds and alders where the lion lay, gathered, and a faint stir hegan there. But nothing came out therefrom all through the gathering of the darkness.

She looked at the squatting-place and saw the fires glowing smoky-red, and the men and women going to and fro. The other way, over the river, a white mist was rising. Then far away came the whimpering of young foxes and the yell of a hyzena.

There were long gaps of aching waiting. After a long time some animal splashed in the water, and seemed to cross the river at the ford beyond the lair. but what animal it was she could not see. From the distant drinking-pools she could hear the sound of splashing, and the noise of clephants-so still was the night.

The earth was now a colourless arrangement of white reflections and impenetrable shadows, under the blue sky. The silvery moon was already spotted with the filigree crests of the chestnut woods, and over the shadowy eastward hills the stars were multiplying. The knoll fires were bright red now, and black figures stood waiting against them. They were waiting for a scream. . . . Surely it would be soon.

The night suddenly seemed full of movement. She held her hreath. Things were passing-one, two, three-subtly sneaking shadows. . . Jackals. Then a long waiting again.

Then, asserting itself as real at once over all the sounds her mind had imagined, came a stir in the thicket, then a vigorous movement. There was a snap. The reds crashed heavily, once, twice, thrice, and then everything was still save a measured swishing. She heard a low tremulous growl, and then everything was still again. The stillness lengthened -would it never end? She held her hreath ; she hit her lips to stop screaming. Then something scutted through the undergrowth. Her scream was involuntary. She did not hear the answering yell from the mound

Immediately the thicket woke up to vigorous movement again. She saw the grass stems waving in the light of the setting moon, the alders swaying. She struggled violently-her last struggle. But nothing came towards her. A dozen monsters seemed rushing about in that little place for a couple of minutes, and then again came silence. The moon sank behind the distant chestnuts and the night was dark.

Then an odd sound, a sohhing panting, that grew faster and fainter. Yet another silence, and then dim sounds and the grunting of some animal.

Everything was still again. Far away eastwards an elephant trumpeted, and from the woods came a snarling and yelping that died away.

In the long interval the moon shone out again, hetween the stems of the trees on the ridge, sending two great hars of light and a har of darkness across the reedy waste. Then came a steady rustling, a splash, and the reeds swayed wider and wider apart. And at last they broke open, cleft from root to The end had come. crest.

She looked to see the thing that had come out of the reeds. For a moment it seemed certainly the great head and jaw she expected, and then it dwindled and changed. It was a dark low thing, that remained silent, but it was not the lion. It became still-everything became still. She peered. It was like some gigantic frog, two limbs and a slanting body. Its head moved about searching the shadows,

A RUSTLE, and it moved clumsily, with a sort of hopping. And as it moved it gave a low groan.

The blood rushing through her veins was suddenly joy. "Ugh-lomit" she whispered.

The thing stopped, "Endena," he answered softly with pain in his voice, and peering into the alders

He moved again, and came out of the shadow beyond the reeds into the moonlight, All his body was covered with dark smears. She saw he was dragging his legs, and that he gripped his axe, the first ase, in one hand. In another moment he had struggied into the position of all fours, and had staggered over to her. "The hon," he said in a strange minglog of exutation and anguish. "Waatl ---I have shin a hon. With my own hand. Even as I slew the great bar." He moved to emphasize his words, and suddenly broke off with a faint cry. For a space he did not move.

"Let me free," whispered Eudena.

He answered her no words but pulled himself up from his crawling attitude by means of the alder stem, and hacked at her thongs with the sharp edge of his axe. She beard hims no bat each blow. He cut away the thongs about her chest and arms, and then his hand dropped. His chest struck against her shoulder and he slipped down beside her and lay still.

But the rest of her release was casy. Very haitby she freed herself. She made one step from the tree, and her head was spinning. Her last conscious movement was towards him. She reeled, and dropped. Her hand fell upon his thigh. It was soft and wet, and gave way under her pressure; he cried out at her touch, and writhed and lay still again.

Presently a dark dog-like shape came very softly through the reeds. Then stopped dead and stood sniffing, hesitated, and at last turned and slunk back into the shadows.

Long was the time they remained there motionless, with the light of the setting moon shining on their limbs. Very slowly, as slowly as the setting of the moon, did the shadow of the reeds towards the mound flow over them. Presently their legs were hidden, and Light-lowit was hat as hast of shiver. The blden, and Light-lowit was hat as hast of shiver. The so at last the darkness of the night swallowed them up.

The shadow became full of instinctive stirrings. There was a patter of feet, and a faint snarling the sound of a blow.

THERE was little sleep that night for the wo-men and children at the squatting-place until they heard Eudena scream. But the men were weary and sat dozing. When Eudena screamed they felt assured of their safety, and hurried to get the nearest places to the fires. The old woman laughed at the scream, and laughed again because Si, the little friend of Eudena, whimpered. Directly the dawn came they were all alert and looking towards the alders. They could see that Eudena had been taken, They could not help feeling glad to think that Uya was appeased. But across the minds of the men the thought of Ugh-lomi fell like a shadow. They could understand revenge, for the world was old in revenge, but they did not think of rescue, Suddenly a hyæna fied out of the thicket, and came galloping across the reed space. His muzzle and paws were dark-stained. At that sight all the men shouted and clutched at throwing-stones and ran towards him, for no animal is so pitiful a coward as the byzena by day. All men hated the hyzena because he preyed on children, and would come and hite when one was sleeping on the edge of the sonatting-place. And Cat's-skin, throwing fair and straight, hit the brute shrewdly on the flank, whereat the whole tribe velled with delight.

At the noise they made there came a flapping of

wings from the lair of the lion, and three whitebacked vultures rose slowly and circled and came to rest amidist the branches of an alder, overlooking the lair. "Our lord is abread," said the old woman, pointing, "The vultures have their share of Eudena." For a space they remained three, and then first one and then another dropped back into the thicket.

Then over the eastern woods, and touching the whole world to life and colony, poured, with the exaltation of a trumpet blast, the light of the rising sun. At the sight of him the children shouted together, and chapped their hands and began to race of towards the water. Only thit is Si lagged behind and boked wonderingly at the alders where she had seen the head of Eudean overright.

From the knoll the bustle of preparation grew, the hacking of spears and throwing-stones. None spake the name of Ugb-lomi for fear that it might bring him. The men were going to keep together, close together, in the hunting for a day or so. And their hunting was to be Ugb-lomi, lest instead he should come a-hunting them.

But Ugh-lomi was lying very still and silent, outside the lion's lair, and Eudena squatted beside him, with the ash spear, all smeared with lion's blood, gripped in her hand.

#### CHAPTER V.

#### The Fight in the Lion's Thicket

GH-LOMI lay still, his back against an alder, and his thigh was a red mass terrible to see No civilized man could have lived who had been so sorely wounded, but Eudena got him thorns to close his wounds, and souatted beside him day and night, smiting the flies from him with a fan of reeds hy day, and in the night threatening the hyenas with the first axe in her hand; and in a little while he began to heal. It was high summer, and there was no rain. Little food they had during the first two days his wounds were open. Io the low place where they hid were no roots nor little beasts, and the stream, with its water-soails and fish, was in the open a hundred yards away. She could not go abroad by day for fear of the tribe, her brothers and sisters, nor by night for fear of the beasts, both on his account and hers. So they shared the lion with the vultures. But there was a trickle of water near by, and Eudena brought him plenty in her hands,

Where Ugh-Iomi lay was well hidden from the tribe by a thicket of alders, and all fenced about with bulrushes and tall reeds. The dead lion he had killed lay near his old lair on a place of rampied receds firly yards away, in a light intrough the recedstems, and the vultures lought each other for the choicest pieces and keyn the jackals of him. Very soon a cloud of first that looked like bees hung over him, and Ugb-hom's flesh was already bealing—and it when Ugb-hom's flesh was already bealing—and it was not many days before that beguen—only a few bones of the lion remained scattered, and shining white.

For the most part Ugh-lomi sat still during the day, looking before him at nothing, sometimes he would mutter of the horses and bears and lions, and sometimes he would beat the ground with the first axe and say the names of the tribe-he seemed to have no fear of bringing the tribe-for hours together. But chiefly he slept, dreaming little because of his loss of blood and the slightness of his food. During the short summer night both kept awake. All the while darkness lasted things moved about them, things they never saw by day. For some nights the hyænas did not come, and then one moonless night near a dozen came and fought for what was left of the lion. The night was a tunult of growling, and Ugh-lomi and Eudena could hear the bones snap in their teeth. But they knew the hymna dare not attack any creature alive and awake, and so they were not greatly afraid.

Of a daytime Endem would go along the narrow path the old lion had made in the reeds until alow was lexyout the bend, and then he would creep into the thickt and watch the trike. She would lie close by the alders where they had bound her to offer her up to the lion, and thence she could see them on the knoll by the fire, small and clear, as ahe had seen them that might. But she to the high-link title seen them that might. But she to the high-link title seen them that might. But she to the high-link title the name. For so they believed in these days, that maring called.

She saw the men prepare stabbing-spears and throwing-stones on the morning after Ugb-lomi had slain the lion, and go out to hunt him, by leaving the women and children on the knoll. Little they knew how near he was as they tracked off in single file towards the hills, with Siss the Tracker leading them. And she watched the women and children, after the men had gone, gathering fern-fronds and twigs for the night fire, and the boys and girls running and playing together. But the very old woman made her feel afraid. Towards noon, when most of the others were down at the stream by the bend, she came and stood on the hither side of the knoll a gnarled brown figure, and gesticulated so that Eudena could scarce believe she was not seen. Eudens lay like a hare in its form, with shining eyes fixed on the bent witch away there, and presently she dimly understood it was the lion the old woman was worshipping-the lion Ugh-lomi bad slain.

AND the next day the bunters came back weary, carrying a fawn, and Ludena watched the feast environity. And then came a strange thing, She saw-distinctly she heard—the old woman shrieking and gesticulating and politing towards sight again. But presently coincide overcome for and the was hack at her spying-place, and as she percend her bears stopped, for there were all the men, with their weapons in their hands, walking together towards her from the knoll.

Bie dared not more best her movement should be seen, but the green observations to be strong the term of the more than the strength best as the strong the strength of the more. She saw they carried a piece of rich more carried as the strength best as the strength of th

They looked at each other and behind them, and partly turned and began going back. At first they walked half turned to the thicket, then facing the mound they walked faster looking over their shoulders, then faster; soon they ran, it was in race at last, until they were near the knoll. Then Siss who was hindmost was first to alacken his pace.

The sumset passed and the twilight came, the fires glowed red against the bazy blue of the distant chestmit-rices, and the voices over the mound were merry. Eudera lay scarcely stirring, looking from the mound to the meat and then to the mound. She was hungry, but she was afraid. At last she crept back to Ugh-lomi.

He looked round at the little rustle of her approach. His face was in shadow. "Have you got me some food?" he said.

She said abe could find nothing, but that she would seek further, and went back along the lion's pathuntil she could see the mound again, but she could not bring herself to take the meat; she had the brutte's instinct of a samer. She felt very miscrable.

She crept back at last towards Ugh-iomi and heard him stirring and moining. She turned back to the mound again; then she saw something in the darkness near the stake, and peering distinguished a jackal. In a flash she was brave and angry; she sprang up, cried out, and ran towards the offering. She stumbled and fell, and heard the growing of the jackal going off.

When she arose only the ashen stake lay on the ground, the meat was gone. So she went back, to fast through the night with Ugh-lond; and Ughlond was angry with her, because she had no food for him; but she told him nothing of the things she had seen.

Two days passed and they were near starving, when the tribe slew a borse. Then came the same ceremony, and a haunch was left on the ashen stake; but this time Eudena did not besitate.

By setting and words she made Ugh-lomi understand, but her ate most of the food before he understood; and then as her meaning passed to him he grew merry with his food. "I am Uya," he said; "I am the Lion. I am the Great Cave Bear, I who was only Ugh-lomi. I am Was the Cumning, It is well that they should feed me, for presently I will kill them al."

Then Eudena's heart was light, and she laughed with him; and afterwards she ate what he had left of the horseflesh with gladness.

After that it was he had a dream, and the next

day be made Eadema bring him the lion't teeth and distribution of them as she could find—and hack him a club of alder. And he put the teeth and claws very cumingly into the wood so that the points were outward. Very long it took him, and he blunted two of the teeth harmering them in, and was very angry and thraw the thing away; but allowards he ished here, due to a new sort set with teeth. That day there was more mast for them both, an offring to the line filter.

It was one day-more than hand's fingers of days. more than anyone had skill to count-after Ughlomi had made the club, that Eudena while he was asleep was lying in the thicket watching the squatting-place. There had been no meat for three days. And the old woman came and worshipped after her manner. Now while she worshipped, Eudena's little friend Si and another, the child of the first girl Siss had loved, came over the knoll and stood regarding her skinny figure, and presently they began to mock her. Eucléna found this entertaining, but suddenly the old woman turned on them quickly and saw them. For a moment she stood and they stood motionless, and then with a shrick of rage, she rushed towards them, and all three disappeared over the crest of the knoll.

PRESENTLY the children responsed among the ferms beyond the shoulder of the hill. Lutter, Si ran first, for also was an active girls, and the other here. And over the koncil cance Six with a lower in his hand, and Bo and Cati-should have a langled have each holding appect of food, and here's haghed And with a durick the child was caught and the pdd warms sets to werk signifying and the child screaming, and it was very good alter-dimens that for them were from and currotive.

And usedemly came the mother of the child, with hair streaming, panning, and with a stone in herhand, and the old woman turned about like a wild cat. She was the equal of any woman, was the chief of the fire-minders, in spite of her years, but hefore she could do anywing. Siks should to her and the chamour rose loud. Other shock heads came into aight. It seemed the whole the was at home and feasting. But the old woman dared note go on wreakne herestle on the child Siks befreinded.

Everyone made noises and called names—even little Si. Abruptly the old woman let go of the child and nade a swift run at Si, for Si had no frends; and Si, realizing ber danger when it was almost upon her, made off headlong, with a faint cry of terror, not heeding whither she ran, straight to the lair of the lion. She swerved aside into the meds presently, realizing now whither she went.

But the old woman was a wonderful old woman, as active as she was spiteful, and she caught Si by the streaming hair within thirty yards of Eudena. All the tribe now was running down the knoll and shouting and laughing ready to see the fun.

Then something stirred in Eudena; something that had never stirred in her before; and, thinking all of thils is and nothing of her fear, she sprang up from her ambush and ran swiftly forward. The old woman did not see her. for she was have beating little Si's face with her hand, beating with all ber hert, and suddenly something hard and heavy struck her check. She went reeling, and saw Eudena with liaming eyes and checks between her and little Si. She shrieked with astonishment and terror, and little Si, not understanding, set of towards the gapting Eudena had driven their fashing fear of the lion out of their heads.

In a moment Eudens had turned from the covering odd worma and overtaken Si. "Sil's she cried, "Sil' She caught the child up in her arms as it stopped, present the nail-lined face to bers, and turned about to run towards her lair, the lair of the old ion. The old worms atood wait-laight in the reeds, and screamed foul things and inarticulate bend of the puth Euders looked hack and are all the men of the tribe crying to one another and Siss coming at a trut callong the line's rull.

She can straight along the narrow way through the reeds to the shady place where Ugh-lomi sat with his healing thigh, just awakened by the shouting and rubbing his eyes. She came to him, a woman, with little Sin her arms. Her heart throbbed in her throat. "Ugh-lomi!" she cried, "Ugh-lomi, the tribe comes!"

Ugh-lomi sat staring in stupid astonishment at her and Si.

She pointed with Si in one arm. She sought among her feeble store of words to explain. She could hear the men calling. Apparently they had stopped outside. She put down Si and caught up the new club with the lion's teeth, and put it into Ugb-lomi's hand, and ran three yards and picked up the first axe.

"Ah?" said Ugh-lomi, waving the new club, and suddenly he perceived the occasion and, rolling over, began to struggle to his feet.

The stood but clearning: He supported himself by one hand against the tree, and just teached the ground rightly with the too of his womded leg. In the other hand he pripped the new ethal. He looked at his healing thigh; and saiddaniy the reeds legan whispering, and casad and whisperid again, and coming castionsly along the track, bending down and holding his intra-hardend stabiling-stick of ait in his hand, appeared Sits. He stopped dasd, and bis eves met Ugbel-hards.

UGH-LOMI forget be had a wounded leg. He stood firmly on both feet. Something trickled. He glanced down and saw a little gout of blood had oczed out along the edge of the healing wound. He rubbed his hand there to give him the grip of his club, and fixed his yess again on Sias.

"Wau !" he cried, and sprang forward, and Siss, still stooping and watchful, drove his stabbing-stick up very quickly in an ugly thrust. It ripped Ughlomi's guarding arm and the club came down in a counter that Siss was never to understand. He fell, as an ox falls to the pole-and's feet.

To Bo it seemed the strangest thing. He had a comforting sense of tall recision either side, and an improgramable rampart, Siss, between him and any danger. Smail-tater was close behind and there was no danger there. He was prepared to shove behind and send Siss to death or victory. That was his place as second man. He saw the butt of the spear Siss carried leap away from him, and avddenly a

dull whack and the broad back fell away forward. and he looked Ugh-lomi in the face over his prostrate leader. It felt to Bo as if his heart had fallen down a well. He had a throwing-stone in one hand and an ashen stabbing-stick in the other. He did not live to the end of his momentary hesitation which to use.

Snail-eater was a readier man, and besides Bo did not fall forward as Siss had done, but gave at his knees and hips, crumpling up with the toothed club upon his head. The Snail-eater drove his spear forward swift and straight, and took Ugh-lomi in the muscle of the shoulder, and then he drove him hard with the smiting-stone in his other hand, shouting out as he did so. The new club swished ineffectually through the reeds. Eudena saw Ugh-lomi come staggering back from the narrow path into the open space, tripping over Siss and with a foot of ashen stake sticking out of him over his arm. And then the Snail-eater, whose name she had given, had his final injury from her, as his exultant face came out of the reeds after his spear. For she swung the first axe swift and high, and hit him fair and square on the temple ; and down he went on Siss at prostrate Ugh-lomi's feet.

But before Ugh-lomi could get up, the two red-haired men were tumbling out of the reeds, spears and smiting-stones ready, and Snake hard behind them. One she struck on the neck, but not to fell him, and he blundered aside and spoilt his brother's blow at Ugh-lomi's head. In a moment Ugh-lomi dropped his club and had his assailant by the waist, and had pitched him sideways sprawling. He snatched at his club again and recovered it. The man Eudena had hit stabbed at her with his spear as he stumbled from her blow, and involuntarily she gave ground to avoid him. He hesitated between her and Ugh-lomi, half turned, gave a vague cry at finding Ugh-lomi so near, and in a moment Ugh-lomi had him by the throat, and the club had its third victim. As he went down Ugh-lomi shouted -no words, but an exultant cry.

The other red-haired man was six feet from her with his back to her, and a darker red streaking his head. He was struggling to his feet. She had an irrational impulse to stop his rising. She flung the axe at him, missed, saw his face in profile, and he had swerved beyond little Si, and was running through the reeds. She had a transitory vision of Snake standing in the throat of the path, half turned away from her, and then she saw his back. She saw the club whirling through the air, and the shock head of Ugh-lomi, with blood in the hair and blood upon the shoulder, vanishing below the reeds in pursuit. Then she heard Snake scream like a woman,

She ran past Si to where the handle of the axe stuck out of a clump of fern, and turning, found herself panting and alone with three motionless bodies. The air was full of shouts and screams. For a space she was sick and giddy, and then it came into her head that Ugh-lomi was being killed along the reed-path, and with an inarticulate cry she leapt over the body of Bo and hurried after him. Snake's feet lay across the path, and his head was among the reeds. She followed the path until it bent round and opened out by the alders, and thence she saw all that was left of the tribe in the open, scattering like dead leaves before a gale, and going back over the knoll. Ugh-lomi was hard upon Cat's-skin,

But Cat's-skin was fleet of foot and got away, and

so did young Wan-Hau when Ugh-lomi turned upo him, and Ugh-lomi pursued Wau-Hau far beyond the knoll before he desisted. He had the rage of battle on him now, and the wood thrust through his shoulder stung him like a spur. When she saw he was in no danger she stopped running and stood panting, watching the distant active figures run up and vanish one by one over the knoll. In a little time she was alone again. Everything had hap-pened very swiftly. The smoke of Brother Fire rose straight and steady from the squatting-place, just as it had done ten minutes ago, when the old woman had stood yonder worshipping the lion.

AND after a long time, as it seemed, Ugh-lomi reappeared over the knoll, and came back to Euclena, triumphant and breathing heavily. She stood, her hair about her eyes and hot-faced, with the blood-stained axe in her hand, at the place where the tribe had offered her as a sacrifice to the lion, "Wau!" cried Ugh-lomi at the sight of her, his face alight with the fellowship of battle, and he waved his new club, red now and hairy; and at the sight of his glowing face her tense pose relaxed somewhat, and she stood sobbing and rejoicing.

Ugh-lomi had a queer unaccountable pang at the sight of her tears; but he only shouted "Wau!" the louder and shook the axe east and west. He called manfully to her to follow him and turned back, striding, with the club swinging in his hand, towards the squatting-place, as if he had never left the tribe; and she ceased her weeping and followed quickly as a woman should.

So Ugh-lomi and Eudena came back to the squatting-place from which they had fled many days before from the face of Uya; and by the squattingplace lay a deer half eaten, just as there had been before Ugh-lomi was man or Eudena woman. So Ugh-lomi sat down to eat, and Eudena beside him like a man, and the rest of the tribe watched them from safe hiding-places. And after a time one of the elder girls came back timorously, carrying little Si in her arms, and Endena called to them by name. and offered them food. But the elder girl was a fraid and would not come, though Si struggled to come to Eudena. Afterwards, when Ugh-lomi had eaten, he sat dozing, and at last he slept, and slowly the others came out of the hiding-places and drew near. And when Ugh-lomi woke, save that there were no men to be seen, it seemed as though he had never left the tribe.

Now, there is a thing strange but true: that all through this fight Ugh-lomi forgot that he was lame, and was not lame, and after he had rested behold! he was a lame man; and he remained a lame man to the end of his days

Cat's-skin and the second red-haired man and Wau-Hau, who chipped flints cunningly, as his father had done before him, fled from the face of Ugh-lomi, and none knew where they hid. But two days after they came and souatted a good way off from the knoll among the bracken under the chestnuts and watched. Ugh-lomi's rage had gone, he moved to go against them and did not, and at sundown they went away. That day, too, they found the old woman among the ferns, where Ugh-lomi had blundered upon her when she had pursued Wau-Hau. She was dead and more ugly than ever, but

# The Astounding Discoveries of **DOCTOR MENTIROSO** by A. Hyott Verrill Through the Crater's Rim," "The Plague of the Living Death," etc.

## DISCOVERIES OF DOCTOR MENTIROSO

DITOR of AMAZING STORIES, DEAR SIR: As a constant reader of

As a constant reader of AMAZING STORIES, I have always been greatly interested in the various opinions ex-

presed by your laterested in the 'winds' optimol depensed by your laterester spacing the stankes which have been published. I have been particularly struck or west storiks, or as in the improbability or these sibility of the incidents related. Personally, I always field hat a story tails in the distant future, or on another planet, never seems to carry convection, much at the very outset toos the creaking of the reader. But this is quite apart from the matter regarding which an writing to you.

Among the many thereas which have been endicied, and which many of your realised have delated tions, or which many of your realised have delated tions, or which send the herea if so be may be called, in solution to further or who the part. A solution time and the solution of the solution of the solution of the delated have and the solution of the solution of the flat the impossibility of tably may become the particle and the solution of the solution one date to address this communication to you while the expection the its solution of the solution of the solution of the source of the solution of

To be brief, and to the point: not only is it possible to eliminate time and enter either the past or the future; these things have actually been accomplished.

Do not think, when I make this hold statement, that I am of measured mind, that I am perpetrating some new heax, or that I am trying to pol fiction in the form of fact. On the contrary, I am merely calling to your attention the remarkable and generally unknown feats of a friend of mine, a highly deducated and eminently scientific gentleman, who for It was solely because of the numerous allegations, on the part of your readers, that time could never be eliminated, and my insistence that his own accomplishment would prove the fallacy of such statements, and would at the same time set at rest the question of a fourth dimension, that Doctor Mentiroso relutantly gave me permission to relate the facts to you.

But as I am no scientist, save for the interest I take in your scientification talks, and as physics, higher mathematics and fourth dimensional problems are quite heyond me, I shall recount, verbatim, as far as possible, my conversation with Doctor Mentiroso,

SOME two 'mouths ago, during a visit to Lima, I bad called, as I invariably do when in Peru, upon Doctor Mentiroso. I had just received a copy of AMAZING STORIES and somewhat jocularly presented it to the Doctor with the remark that it might give him some new ideas,

He glanced rather idly over the magazine, until his eye caught a page which instantly aroused his interest and indipation. "fickots" he exclaimed in his impulsive Latin way. "Idiots that people are! Did you read this, Don Alfeo?" Then, without awaiting my reply, he continued:

several years past, has held the position of instructor in applied physics in the second oldest university in America, the University of Santo Tomas, at Linus, Peru,

Dr. Fenomeno Mentiroso is, as anyone in Peru can testify, a man whose word and honce cannot be questioned. His works on the higher mathematics of physics and his clear and concise exposition of the Einstein Theory, which was first need as a paper American Scientific Congress in Lima in 1920, are familiar to every scientist throughout he world. He I<sup>6</sup> this story does not bring forth the greatest assume of aphysics proven or resolver, that we have had since the magnitude stored, we will be willing to confer that store the stored of the store of the store of the store time in the store of the store of the store time in the store (have a the other read that does doese times before he gets through which it. It is use of the most remarkable cointrighten otheric state we have error isogered. "Trenerfoldson' is the case used that will break before was at through the store stored that will break before was at through the store store that the store the store the store store the store the store the store the store store the store the store the store of the store the store store the store store the store store the store s

In this story one suff-known author delves into the mysterics of home and its contains encodest actuace and encodent arcentific facts throughout. Is it pushifs to story into the future? Is it possible to winners assumiting new that happened yesterday? And is it parable to exhault accounting that will hapter to morrow?

The author shows you, by giving you abrivus proofs, that all this is not only possible, but can apparently be done even now.

The big question mark however, remains: Is all this possible, or is it not? But read the story and see for yourself.

would be the last man to attempt to foster a hoax or to allow his imagination to wander-into unproven fields, but he is withal a very modest individual and dreads, more than anything else, lest any statement or declaration he may make should he considered fictional. And his latest exploit is so sensational. there is no fourth dimension and hecause it is impossible to he in the future or the past coincidently with one's existence in the present."

I laughed. "But that obviously is impossible," I replied. "And as for a fourth dimension,-why, aming mig. how can there be any dimension other

"Will the world never learn that there is no such word, as impossible? Will propie never cease to call impossible' everything they do not understand? Of a truth, my good friend, the stupidity of my fellow men at times makes me ashamed of the human race."

"What," I asked, "do you refer to now?"

"To these letters," he exclaimed, pointing to the paragraphs he had read. "To these letters wherein the writers, who obviously know nothing of the sabject, find fault with Seilor Wells' and other authors' stories because, they say, than length, breadth and thickness? These stories, Dow Feromeno, are merely fiction, fiction glossed with science, it is true, but pure imagination none the less. You do not understand, perhaps, that they are not intended to be taken seriously."

The Doctor shrugged his shoulders and regarded in privingly. "Fiftient, I grant," has day, "but helion only manunch as the more of persons and their basis fasts in 5-force Wells' story, and in the others along are genere. It is hard to explain to one who is unimalitier with incrived thronics of the grant manufaultier with incrived thronics of the grant fourth dimension is as essential to the universe fourth dimension. And if a certain thing is essential to usering a star and the store that the second dimension. And if a certain thing is essential to extend.

"But," I objected, "if there is a fourth dimension, what is it? And why has no one discovered it?"

"It has been discovered," dedared my triend positively. "I, Doctor Feroameno Mentirosa, have discovered it. And I will try to explain to you what it is, though I doubt if you can grasp it, for so accustomed have men become to think of the existence of things which do not exist, that the ordinary mind cannot grasp the existence of matters which they think do not exist."

I three up my hands in despair. "It's beyond me," I declared. "If a thing exists which doesn't exist, and things which exist do not exist, then we must all be mad and the whole world must be topsytury."

"On the contrary," he continued, smiling pity ingly at my apparent ignorance. "It would be madness not to admit such obvious truths. You dream, my friend, and as you dream all that occurs is to your brain real and existent, and yet, when you wake, you feel convinced that your dreams were unreal, that nothing existed in them and that only during your waking hours do your senses record matters which truly exist. But suppose, if you can, that matters are in reality reversed, that your dreams are actualities and your impressions during waking hours phantasies. Or imagine again, that both your dreams and your waking-hour experiences are both equally real, but that, during your slumbers, you enter into another sphere, into the unknown, unexplored realm of a fourth dimension. What proof have you that your dreams are not as existent as your other impressions? None! my friend, not a shred of proof; merely the fact that for generations we have been taught that dreams were imaginary figments of the brain. It is just as true of countless other matters. Does space exist? Do length, breath and thickness exist?"

"Of course," I interrupted. "Otherwise no object, neither you nor I, could exist, and geometry and other mathematics could not exist. I—"

 hand and foot to our own petty sphere, to this earth of ours which is an infinitesimal atom in the universe, and we measure everything by earthly stand-ards and by our own five senses. We can conceive of nothing that we cannot smell, taste, touch, see or hear. No living man can conceive or describe any form totally unlike anything on earth. No man can conctive or describe a color or a sound unlike anything he has ever seen or heard. Did you ever think of that, amigo mig? And only a comparatively few men can realize that there is-scientifically speaking -no such thing as solid matter. A few years ago, a thousand things in common use today would have been scoffed at as impossible. Even today it is hard for the average man to understand radio, to understand why an airplane flies, and it is still harder to realize that objects which we speak of as solids are merely the result of combinations of electrons and protons. And it is a thousand times more difficult for the average man to conceive of everything being, as is unquestionably the case, merely the result of vibratory waves."

"Hold on ?" I exclaimed. "You are getting heyoud me, and I cannot see where your highly entertaining lecture is leading. What has all this to do with the elimination of space? And how can matter be composed of waves?" Doctor Mentiroso sighed and shrugged bis shoulders expressively.

"I forget, dear friend, that you are an example of the average man," he laughed. "All that I have said has a direct bearing on the elimination of space and the fourth dimension. But to answer your last question. We know that light, heat, sound, electricity, radio, color, smell are all the result of vibratory waves. And beyond question there are countless thousands of vibratory waves too short or too long to be received or intercepted by the human organs. Heat vibrations are invisible until they are reduced to a length perceptible to the eve. Light vibrations are not detectable hy the sense of touch or feeling until they are lengthened to the point where they are known as heat. Only a small percentage of sound vibrations are within the range of the human car, and electro-magnetic vibrations cannot be detected by any human organ until so altered as to become sound waves." I shook my head. "Before you proceed," I begged,

I shook my head. "Before you proceed," I begged, "can you make this a bit clearer? You say that heat vibrations can be made visible, that light waves can be made detectable by touch. How?"

"II," regical Don Personence, speaking alowly and choosing his work, "I' you hant at her of iron up to a certain point it will have work or your skin, and the second second second second second second have it is 'red bot,' as you say, because you see, is become with c, on the resonance second second books of the second second second second second books of the second second second second visible. If the iron is batter still more, the resonance books of the second second second second second your certs. Conversely, the white or red viscations the resonance books of the second the metal to coal. In other work, highly waves age the result to coal. In other work, highly waves age also by touch and are considered haves."

"Then," said I, quite pleased with myself, "according to your theory, light and heat are identical."

"In a way, yes," replied Don Mentiroso. "But, in

#### DISCOVERIES OF DOCTOR MENTIROSO

the same way, all vibrations are identical, for all are caused merely by the movement of electrons-forcing more electrons into a given space or depriving some space of its normal number of electrons. Possibly your mind cannot conceive the fact, but nevertheless, every force, every power, every motion, every body, and in fact everything we know-nerhaps our thoughts, our senses and our so-called lifeare merely the results of electronic motion.

"Well, even if I grant all this, what has it to do with the original subject of our discussion?" I demanded.

"Everything," declared my friend. "Granted that everything is the result of electronic movement, and you know, of course, that the electrons are in effect miniature satellites revolving about a central nucleus, much as the earth and moon revolve about the sun. then we must admit that nothing actual, as we know it, exists; that everything is merely relative and that time itself must be the mere expression, in arbitrary terms, of some electronic force or vibratory waves.

"Nonsense," I exclaimed. "I suppose you will be claiming that time does not exist."

KNOW it does not," was his astounding reply. "It is merely a relative term coined for the convenience of the human race. But permit me to proceed. I will demonstrate this to you presently. You asked about the fourth dimension a moment ago. Now let me ask you a question. Has a circle length, breadth or thickness?"

"Why, of-" I hesitated. "Certainly," I declared after a moment's thought. "A wheel or a disk has thickness, and its diameter is its breadth."

Doctor Mentiroso augues. "But neither a wheel nor a diak is a circle; it is is the definition of a circle. A mathematical plane with its boundary equidistant from its centre everywhere. Did not your geometry attempt to solve all problems by dividing the circle into triangles? And yet a triangle has three straight boundaries, whereas a circle has no portion of its boundary or circumfer-ence straight. In other words, amigo mio, as a circle possesses neither length, breadth nor thickness, it must of necessity possess a fourth dimension, and the mathematicians, knowing nothing of a fourth dimension, must of necessity fit their geometry to the occasion and attempt crudely to transform it into triangles which have length and breadth. And yet circles may be transformed to length or breadth just as triangles or parallelograms may be transformed into cubes or pyramids." "Then," I laughed, "you consider the circle the fourth dimension?" "Not at all," he exclaimed a bit impatiently. "I am merely trying to demonstrate to you that a fourth dimension must exist or otherwise there could be no circles and consequently no spheres and consequently, no revolutions or rotations of electrons, atoms, stellar bodies or anything else. The earth could not rotate on its axis, it could not follow its orbit about the sun, for none of these things would be possible with the existence of length, breadth and thickness alone, with parallel lines which never meet and with mathematical planes. No, my friend, the fourth dimension exists, it is ever present, it is essential to our lives, to our existence and to our universe, but being as yet inconceivable to us, we cannot describe it, measnre it or understand it. It is, in fact, beyond our

present senses, just as the higher and lower sound vibrations, the shorter and longer light waves, and the radio waves are undetectable by our organs

"That is a safe way of putting it." I said. "Of course, if we assume that no one can detect it, then no one can be positive that it does not exist. But don't you think all that is negative evidence? And how does it affect the question of time elimination. of going into the past or future while still in the present, which was, Don Fenomeno, the original matter under discussion?"

"I presume," he replied after a moment's thought, "that you do not consider it possible to enter the future, while still in the present."

"I certainly do not," I assured him. "If that were possible, one might foretell with certainty what would occur tomorrow or a year hence." "Precisely," he agreed. "And what if I assure

you that you or I can foretell what will occur in the future."

"I should think, my friend, that you were absolutely mad," I replied

Don Fenomeno arose, crossed the room to a table, and returned with a copy of El Tiemøo in his hand Glancing over it, he pointed to a paragraph and handed the newspaper to me.

"Will you be good enough to read that news item?" be asked

"Nothing remarkable," I declared, as my eyes glanced over the indicated paragraph. report of a railway accident in India, and the death of sixteen persons."

"Quite so," agreed Doctor Fenomeno. "And when is the despatch dated?"

"Docember 18th," I replied

"And does it state at what hour the accident occurred?" he asked

"Yes," I replied, reading from the paragraph, "at seven P. M. today the Jarabad local train which left Marajpore at 5.30

"Enough," he interrupted. "The accident, then, occurred at 7 P. M. of December 18th. Will you glance at the date at the top of the page and tell me on what day this copy of El Tiempo was printed?"

"Why, on the 18th, of course," I replied

"Exactly," he smiled, "and as you know, El Tiempo is on the streets of Lima at 6 A. M. Hence a paper sold on Lima's streets at 6 A. M. contained news of a railway accident in India which did not occur until 7 P. M. of the same day. In other words, El Tiempo foretold exactly what would occur in another part of the world thirteen hours before the event took place. And yet," he added, shrugging his shoulder, "you assure me that it is impossible to enter the future while in the present." "But, but," I expostulated, "it did not actually

occur thirteen hours later. It's merely the difference in time between Peru and India; it was 7 P. M. there when 6 A. M. here. That's not-"

" DARDON my interruption," he exclaimed. "You say that it is merely the difference in time. Then you admit that time is merely a relative term. And you were about to state, if I am not mistaken, that the fact that the accident was reported thirteen hours before it occurred did not actually constitute entering the future. Ah, my friend, how inconsistent you are. Suppose, for the sake of argument, that you or I possessed means of traveling to or from India instantonosity, or even at undersmot of pred-at-at specification of the second of the second of pred-at-at specification of the second of the second case, environment of the second laws form form at action of the second laws form there and could law to destine of the second laws form better and could law to destine of the second laws form the second laws to destine of the second laws form the second laws to destine of the second laws form the second laws to destine of the second laws form the second laws to destine of the second laws form the second laws of the second laws form the second framed operation of the second laws for the public have former? The second laws of the

I was actually stumped. But presently I gathered my wits together. This was, I knew, uter momene. It was all the result of the variation in time due to the earth's roution on its axis, and I felt-that ny friend was merely arguing for the sake of trying to convince the the impossible was possible by scientific convince the the impossible many possible by scientific outwards of the impossible many possible to a scientific with a hulf-printing hulf-the present sale as a terpersed these graningents.

"You are, in a way, dealing with the pith of the whole matter," he announced when I ceased speaking. "That is, you refer to the variation of time, to the rotation of the earth, and by so doing you tacitly admit that time is actually non-existent, that, scientifically speaking, there is no past, no present and no future; for, if time, as you understand it, exists; if the past vanishes and the future is never present, then time would be the same everywhere. Your socalled time, therefore, is merely a relative term used to describe the motion of the earth in its relation with the sun. In other words, human beings have discovered that our sphere rotates upon its axis and follows its orbit about the sun, and for convenience, mankind has seen fit to divide the rotation and the orbit into periods which we are pleased to call hours, days, months and years. But time literally is a far different matter. It is in fact infinite, it goes on into infinity and springs from infinity. Nothing in nature, amigo mio, is ever wasted or destroyed, although it may alter in form or substance. The light we see here, the image which such light throws upon our brains by the medium of our eyes, does not end here, any more than it began here. It is merely a vibratory wave which has travelled millions of miles and will continue to travel millions, trillions of miles -into infinity in fact-and as it requires an appreciable period for even light to travel, every visible event of the past must be somewhere in that infinity just as every event of the future must be recorded somewhere and is travelling toward us to be revealed when it reaches us. In the same way, time is but a vibratory wave, a movement of electrons, and could one but follow the path of time at a greater speed than the vibratory wave travels, then most assuredly could one witness events which transpired a hundred or a hundred thousand years ago. Or, going in the other direction, he could see events which would not transpire on earth for thousands of years to come.

"Hold on," I cried. "You are merely theorizing, carrying scientific hypotheses to the ultimate degree. And besides, even if I admit your preposterous statements to be theoretically sound, you are carrying the whole matter beyond the range of possibilities of human beings and into space; they do not apply to happenings on earth and hence, as I said before, it is impossible for us to enter either the past or the future."

I thought I had stumped my friend, but I was mistaken.

"V for the average man to visualize or comprehend anything beyond the confines of our own planet. So, my friend, we will confine ourselves to this petty earth of ours. And to prove to you that my statements and 'theories' are sound, let me call your attention to a few facts which, with a little reflection, you must recognize as irrefutable. The earth, you know, revolves from west to east at an approximate speed of 1,000 miles per hour, and hence each so-called hour of time represents approximately one thousand miles of the earth's greatest circumference. Bear in mind, please, that in speaking of these matters, I am referring always to approximate figuresthough if you wish, I can give you the exact figures. But to resume. Granted then that it is, according to the accepted ideas of time, noon, Monday, in Lima; it will be approximately six P. M. in London or Barcelona; 12 P. M. in Calcutta and 6 A. M. in Hawaii. "Yes," I assented. "Roughly speaking, that is so."

"Very well," continued Dector Mentiron. "Suppose, for the sake of argument, that you are provided with a machine which can travel through the sit at a speed of 1,000 miles per hoar, and supposing that in this machine you start eastward from Lims at noon today, it is also assumed that you will after if until you again arrive at Lima. At what time would you reach Barcelona?"

I did a br of mentil calculation and replica confidently: 'Art 6 P. N." Don Fromerone laughed leartily, 'Ch, my dear 'Iriend,' he exchained. 'Wrong at the very start. 'No i copyet that at the 'Wrong at the very start.' No i copyet that at the in Spain.' And as you have supposedly consumed six hours in reaching your destination, it will be 12 P. M. when you arrive there, although your watch will all you take it is had 6 P. M. So you have well. Suppose you have at once for Calcuta 24 what hour will you arrive at the fulfion eity?'.

This time I was a bit more careful, and after a moment's hesitation replied: "At noon on Tuesday."

"Exactly-according to Calcutta's clocks," assented my friend. "But suppose you glance at your watch. You will find that it is only 12 P. M. on Monday, so that you have now entered twelve hours into the isture. But continue eastward and head for Hawaii. Reaching that delightful spot, what time do you find it is?"

Rapidly figuring with a pencil on a scrap of paper, I gave my answer: "Approximately 12 P. M. Monday."

"And according to your watch, 6 A. M. Tuesday," chuckled the dottor. "In other words, you find Hawaii's time precisely the same as was calcuttis' sis hours before, while you have traveled back from the future six hours towards the present; and, comtain you completely your journey around the earth at noon on Tuesday--twenty-four hours after leaving; and remarkable as it may seem, your watch and the

## DISCOVERIES OF DOCTOR MENTIROSO

clocks in Lima agree on the bour. By some mysterious means, you have come back to the present after entering the future to the extent of twelve hours."

"But," I objected, "you forget that in crossing the approximate 180th degree of longitude in the Pacific, a day is added or subtracted according to whether one is traveling east or west."

"Quite true," agreed the doctor, "But supposing yout had done so, then when you arrived in Lama, it would have been a day later, whereas it would of necessity—considering that you circumaxyighed the earth in twenty-four hours—be the same day. And to further prove the fallacy of your argument; suppose yout start from Lina in a westerly direction, stooring at the same

supports as before. In that case, *amigo mio*, be good enough to tell me at what hour and on what day you would arrive at Hawaii?" "That is easy." I declared, "I would arrive at Honolulu at approximately 6 P. M. on Monday."

"By your own watch, yes," chuckled my friend. "But at noon on Monday according to the time in the Hawaijan Islands. In other words, you might truthfully be said to have traveled from Lima to Honolulu instantaneously, But if you continue on your westward flight, at what hour, by Calcutta time. would you arrvie at that town?"

"I suppose there's a catch in it," I replied, "and I confess I'm getting so confoundedly confused that I might as well guess at it. I should say at 6 A, M. Tuesday,"

Doctor Mentiroso laughed good naturedly. "No, my friend," he announced. "It would be at noon on Tuesday, for during the twelve hours which have passed since you left Lima, twelve hours have also passed in Calcutta, although your own timepiece would indicate that it was 12 P. M. on Mon-

day, so you would again be 12 hours in the future. But continuing on your way you would find, on arriving at Barcelona, that it was still noon on Monday, although 6 A. M. Tuesday by your watch, so that you had leaped from twelve hours into the future and were now hack six hours towards the present. Continuing onwards, you would reach Lima at 12 noon on Tuesday, your watch would indicate noon on Tuesday, and you would suddenly discover that you lad been in three places, spearated one from the other by nearly six thousand miles, at precisely the same bour."

I THREW up my hands in despair. "I know you are juggling figures," I declared. "But I'll be hanged if I see where it comes in. I suppose you still have something up your sleeve. Well, fire away. I'll be the goat."

Don Fenomeno nodded and smiled. "Then let us assume that your purely imaginary aircraft is capable of traveling at the rate of 24,000 miles per hour or that, in an hour's time, you can circumnavigate the earth. In that case, starting from Lima at noon on Monday, and rushing eastward, you would arrive in Barcelona at 6.30 P. M. on 'Monday, though your watch would show it to be 12.15 P. M. You would reach Calcutta at 1 A. M. Tucsday, although still only 12.30 on Monday by your watch. At Hawaii you would find time had leaped back to 7.30 A. M. Monday, despite the fact that your watch showed 12.45 of the same day, and at 1 P. M. on Monday by your watch you would he back in Lima where the clocks would prove to you that it was 2 P. M. despite the fact that you had been absent only one hour." "And what marvel-

"And what marvellous thing would occur should I reverse my flight and travel westward?" I asked,

"In that case," he replied, "you would be at Honohulu at 12:15 Monday by your watch, but at 6.15 A. M. by the local clocks. At Calcutta you would

find the inhabitants soundly sleeping at 12.30 Å. M. Tuesday, although by your own time it would be barely half an hour after noon on Monday. At Barcelona the working people would be going home

from their labors at 6.45 P. M. on Monday, despite your watch telling you that it was 12.45, and you would get back to Lima at 1 P. M. on Monday to find that your watch agreed with Lima's time. And now, if you are not being bored, let me give you a still more striking illustration of the purely imaginary and relative status of what we ordinarily call time. If, when in your 24,000 mile per hour craft, you set your watch in accord with the local time at each point of call it would work out thus when going east: Leaving Lima at noon on Monday you reach Barcelona at 6.30 P. M. Monday, and setting your watch to agree, you proceed to Calcutta where you arrive at 1 A. M. on Tuesday to find your watch indicates 6.45 P. M. Monday. Again altering your watch and heading for Hawaii, you arrive there at 7.30 A. M. Monday, regardless of the fact that your watch says 1.15 A. M. Tuesday and, having readjusted the latter, you proceed and reach Lima at 1 P. M. Monday and find your watch is at 7.45 A. M. Monday. Thus you will have been in the future over six hours at Barcelona, and over eleven hours in Calcutta, but you will have been into the past eighteen hours in Hawaii and back in Lima five and one-half hours before you left this city."

"That," I epicahisel, "is rificial using the periphesis true," declared Dow Forenceson-"Moreover, should you follow out the same system and travel was to you would return to Lina to find hours on your journey although you how you had been away only one hour." Tel's all book," I do chard. "It's like proving black is white or that a cat has three tails, by mathematical formula. Arrive one dosand the set of the set of the set of the set of the dosand."

My Peruvian friend raised his dark cyebrows and shrugged. "Be very sure, my good friend, how you use the word imnossible." he advised me. "Do not forget that, twenty years ago, anyone would have declared it impossible for man to fly in air at over one hundred miles per hour, and that, scarcely longer ago, it would have been deemed equally impossible to construct a motor car which would reach a speed of fifty miles an hour, not to mention one hundred miles and more. But before challenging your statement, let me, for the sake of clarity, give you a brief summary of the examples I have been drawing for your edification. Your watch, as you have seen, if kept at Lima time, would be constantly in the present (speaking approximately and regarding for our purpose the space of one hour as present) and yet you would have been at spots where yesterday's events were occurring and at others where tomorrow's happenings were taking place. And, this, my friend, is important : Provided the speed of the machine in which you travel could be accelerated so as to travel faster than light, you could go backward or forward into the past or present or into the fourth dimension. Moreover, as the human eye is incapable of registering the alternating effects of darkness and light at a speed greater than about 20 per second (as exemplified in the cinema), if you were passing rapidly cnough about the earth, you could see no difference between light and darkness, could not realize time, and would appear to remain stationary and with time non-existent; and at the same time, you would be quite invisible to the eyes of any human beings. But even if your speed were not greater than the moderate speed of 24,000 miles per hour, you would of necessity go farther and farther into the past and future at every lap about the earth until—"

"MODERATE speed," I interrupted. "I like machine would become incandescent through friction, and would be transformed to gas and ashes. Now don't try to kid me into-"

"Don't think for a moment I am endeavoring to "kid" you as you call it," said Doctor Mentiroso, in injured tones, "Nothing is farther from my thoughts. I started out to convince you that the elimination of time was not impossible, and that a fourth dimension exists and has been discovered by me, Doctor Fenomeno Mentiroso, your most bumble servant and very good friend. I admit that, under ordinary conditions, a machine traveling at such bigh speeds as I mentioned, would become heated to the incandescent point, but such a result would be due entirely to the friction of the air. Suppose then that the machine should travel beyond the atmospheric envelope of the earth, or that means could be found for eliminating air friction. In that case, you must admit there would be no fear of heating.

"You can suppose anything," I replied. "But suppositions are not actualities, and no one will ever be able to travel through space or overcome air friction. That, at least, you must admit is impossible. "On the contrary," declared *Dos* Feonemon, "I nisk that it is not only possible but that it actually has been accomplished."

I gased at my friend in incredulous manzement. Had Doots Mentinos taken lareve of his senses? Or was he merely trying to lead me on for the sake, of argument Y. Unguestionally, J docided, it must be the latter, for my friend was obviously as sano as ever, and was semiling at me in such a superclious, or rather I might say, triumphant manner, that I was quite sure he bad something up his slever.

"Pertaps," I suggested with a laugh, "you mean it has been accomplished theoretically. And by the way, did I not understand you to say that you had discovered the fourth dimension? Let's hear about that."

"You understood correctly, amigo mio," reglied Don Feromeno. "I have discovered the loarth dimension, and instead of accomplishing the feat of agent, and accomplished the list." Moreover, the two discoveries are closely correlated, or, shall 1 say, dependent one upon the obset. Had I not discovered the secret of the fourth dimension, I could not have accomplished the ven greater feat. plained the latter, I would not have discovered the secret of the fourth dimension."

"I suppose," I remarked sarcastically, "that you will now inform me in all scriousness that you actually have constructed an apparatus capable of traveling one thousand miles an hour or more."

"Decidedly more," was his calm response. "To be exact, very nearly ten thousand miles an hour, and--"

"You're absolutely mad, my friend !" I exclaimed. "But go on, one must burnor the insane. Next, I presume you will assure me that you have flown in your dream machine, perhaps have even circumnavigated the world, and have thus proved the possibility of entering the future."

"I shall begin to believe in mental telepathy, if you continue," he laughed. "Your presumptions are extraordinarily correct. I have flown-or rather traveled, in my 'dream' machine as you see fit to call it, and I have circumaravigated the world at a speed nearly cleven times the speed of the earth's rotation, I--"

""Wait a bit?" I cried, now convinced that my friend had taken leave of his senses, but anxious to see how far he had gone, "You spoke of your apparatus traveling ten thousand miles an hour and now you tell me you have traveled around the earth eleven times faster than the globe rotates on its axis. I don't get that."

"I torput to mention," he explained, "that the dicovery of the principle of the fourth dimension also covery of the principle of the fourth dimension also as it is correctly alled, and as I have already taid to the second second second second second second provide the second second second second second gravitational publy, will, when baseds castward, treed as a boars, and free from an anopeleer fixitions and gravitational publy, will, when baseds castward, treed as a property of the second "Key property of the second second second second disponse the principle second second second second disponse the principle second secon

"The fourth dimension again," he answered. "It will, of course, he difficult for you to understand. but I'll try to explain it in terms which are familiar to you. And I see that you think I am crazy. I'm not surprised, my friend, but, as a matter of fact, I was never samer. I think, before I am through, that you will realize this. But to reply to your most natural query. If, for example, you jump into the air, you temporarily overcome gravitation through the use of muscular power which is greater than the force of gravity on your body, hut you can only jump so far. In other words, your limit is one of the three recognized dimensions. If you jump longitudinally, the same thing occurs, for your leap is limited by length; and here let me call your attention to a very ordinary, but hitherto entirely overlooked matter, which is of the utmost importance. When you leap upward, you return to your original position or to the earth in an approximately straight line. But when you leap longitudinally, you travel from start to finish in a curved line. Although, so far as I am aware, this phenomenon has never at-tracted much attention, it is an indication of the existence of the fourth dimension. But I am digressing. Just as your recognized three dimensions measure your jump perpendicularly or horizontally. so the fourth dimension regulates or controls the distance my apparatus can move against gravitational pull; perhaps it might be better to say that the gravitational pull controls the fourth dimension."

"ANOTHER point," I insisted. "If you overcome air friction, how do you propel your machine? I may be a layman, hut I fail to see how any apparatus can be propelled without friction. I have always understood that it was frictional resistence which propelled an airplane."

"Usually it is," he replied. "But in the present case, no. My apparatus embodies an entirely new principle. I am very sorry, but I scarcely like to divulge it at present, and," he added with a laugh, "you probably wouldn't be any the wiser for the explanation."

"I might if I could see it," I suggested.

"Towniky," he repaired with an old ranke. The we will law that will have, As I remarked, it is apparent, but i will do up heat. Relieved at most of a grantent, but i will do up heat. Relieved at most of al corner, does on is thrown violently upward how all corner, these on its thrown violently upward how all corner, these on its thrown violently upward how all corner, the second second second second second description, which, for reasons I will explain, I have called "Ensensor," Being free from air from east to west at 1,000 miles per hour, the result which the earth and its errorbog of anomalower withing from east to west at 1,000 miles per hour, the result which the earth and of a one parar-

"But you stated that your machine traveled at a speed of 10,000 miles per hour," I objected.

"So it does," he declared, as calmly as though speaking of fifty or one hundred miles an hour? "And that speed, added to the speed of the earth's rotation, equals the 11,000 miles I referred to. But, my good friend, I have already told you that; how many times must I repeat such simple matters?"

"Kery pood," I agreed, still determined to humo" "They may appear simple to you," I sidi, "and you him," not if there is no attraction of gravitation, why, may be stard as you appear to not be not the near house did you not by off into space?" "I'm still also see how you believe. And I "The fourth finension again," he answered. I'm still also see how you projed your machine when, will of course, he difficult for you to understand, as you chim, you chimma at if fieldu or pressure or but II't try to explain it in terms which are familiar wheney you may call it."

"I was coming to that very point when you interrupted me," he replied a hit impatiently. "As I said, the earth's atmospheric envelope is sweeping past the apparatus at a speed of 1,000 miles per hour. In other word's, the apparatus stands isolated in the centre of a one thousand miles per hour hurricane. Is that clear?"

"Perfectly clear," I assured him.

"Very well," he continued. "Now let me ask you a question. Did you ever hear of the so-called rotorship, a vessel invented and constructed a few years ago by a German?"

"Certainly," I replied. "The vessel, as I resall, haves the spectral replication of the spectral replication of the west provided with large cylindrical nusts or towers which were revolved at high speed, the idea being that with olimping on a rotating surface produces a vacuum and forces the rotating surface forward. But the rotor ship. I believe, proved a complete failure. Anybow, what has that to do with your discoveries?"

"Nothing, directly," he said, "I was meecly seek ing some snallin ting which I could use as comparitors to enable you to graps the basic principle of the same straight of the same straight of the point of view, but was merely commercially impratial, write you varies latents which in now and after the same straight of the same straight of the point of view, but was merely commercially imprating the same straight of the same straight of the same straight of the same straight of the mass of air moving at 1,000 miles and heart, a portion of that force of air were permitted to a this upon a revolving wat face, my appendix sould enable of the measurement of the same straight of the same straig

"I can understand that," I admitted. "But it certainly would not move forward at 10,000 miles an hour when the speed of the air was only 1,000 miles an hour. Moreover, what means could you employ to prevent the air friction if you used that friction for your propelling force? It seems to me, my friend, that you are contradicting yourself."

Again, Don Fenomeno smiled that superior and condescending smile. "Suppose the entire frictional force were exhausted in propelling the machine," he observed. "And by rotating the rotors, as we may call them, rapidly enough to absorb all the friction. and by allowing the friction of the air to act upon certain properly designed surfaces elsewhere, the apparatus would and actually did travel at the speed have mentioned, although I admit I employ the gravitational pull as an auxiliary force. Just as an airplane rises and moves forward because of the angle of incidence upon its planes, so, by utilizing the gravitational force which would tend to draw my machine to earth, and then by special apparatus preventing it from descending, I would achieve a similar result and force the machine forward."

"But tell me," I broke in, now thoroughly interested and quite oblivious of the scenning impossibilities he was describing. "Tell me what power you use to accomplish these marvels. And what is this fourth dimension or Eisnesmon' as you call it?"

"I'll answer your last question first," he replied. "Although, as a matter of fact, I cannot exactly explain what 'Esnesnon' is myself."

I laughed. "You say you've discovered something you cannot describe," I exclaimed. "Come now, Don Fenomeno, aren't you trying to see how far you can spoof me, as the British say?"

DOCTOR MENTIROSO flushed. "If it were not for the fact that you are a very old and dear friend of mine, and inexpressibly stupid, I should take offense at that remark and should refuse to say another word," he declared. "But under the circumstances, amigo mio, and knowing that you are really most simpatico, and that it is most difficult to convince one of anything quite new and revolutionary, I shall with patience control myself and will do my little best to convince you that I am serious and at the same time make clear to your uncomprehending mind exactly what I have done and how it has been accomplished. You say I contradict myself. My friend, you no doubt admit the existence of oxygen, of hydrogen, of nitrogen, of electricity, of radio waves and of numerous other things which the world accepts and uses in every walk of life. You admit, unquestionably, that the entire life of our planet, if not other planets as well, the existence of the universe in fact, depends upon the gases I have mentioned. But can you or any other man describe them.' Can you give a clear definition of what oxygen, for example, is like? Have you or has anyone else ever seen it? And yet it has been discovered; it is in daily, hourly use; it is combined, isolated, confined, and, in combination with other materials, it assumes tangible forms. The same is true of electricity, of radio waves, of countless other things I might mention. 'Esnesnon' is much the same. It is invisible, intangible, indescribable, and yet without it the universe could not exist, and like many other things, it can be isolated, utilized and combined with other things."

"Hmm. There may be something in that," I admitted. "You say the "Essesson" is not a force but a dimension. What then is the power or force you employ to achieve your amazing results?"

"The greatest force or power in the entire universe," declared Dons Fenomenon, "The force which, for ward of a better term, is known as the attraction of gravitation; the force which holds the planets to their orbits, the earth to its rotation, the spheres in place, and prevents you and me and the world about us from being transformed into attenuated gaseous matter."

I shook my head in despair. "You're getting beyond me again," I expostulated. "I've always understood that the attraction of gravitation is downward or towards the centre of the earth. In that case, I can't see how you can utilize the power except for coming down."

'Of course the pull is downward, or rather towards the centre of the earth-or towards the actual mass of any object," he exclaimed. "Every body has its gravitational force, which is exerted upon other bodies. But please understand, my friend, that the so-called attraction of gravitation is an electronic force and not a magnetic force. As far as your other question is concerned, may I call your attention to the fact that the force of water is also downward, you never saw a waterfall flow upward; and yet, as you know, water power may be utilized for innumerable purposes and to produce force for driving mechanisms in every direction. The same is true of the force of gravitation. Once its mysteries are mastered, it may be used as freely as water, steam, electricity or any other force, and being the supreme force of all forces, and the source of all, its power properly directed, is millions of times greater than any other known power."

"But how on earth did you happen to discover all this?" I demanded, at last convinced that Doctor Mentiroso had actually accomplished seemingly impossible feats beyond my wildest dreams.

possible feats beyond my wildest dreams. "In a way," he replied, "I cannot claim to have discovered these things. I have rediscovered them. They have been known for centuries-perhaps thousands of years. No, do not look so skeptical, amigo. I am speaking the unvarnished truth and will explain. As you know, far more Inca than Spanish blood flows in my veins, and for long I have devoted much time to studying the history and remains of my ancestors. The stupendous works of the pre-Incas in particular have always been a source of marvel and wonder to me, as to yourself and to countless thousands of other men. Feats which they performed seem almost supernatural, as you know. The massive walls about Cuzco and Lake Titicaca, walls composed of stupendous blocks weighing scores of tons; blocks of twenty to thirty or more faces. and each so perfectly cut and so accurately fitted that even today a pen-point cannot be inserted between the stones; the cyclopean monuments and buildings; the tunnels cut through many feet of living rock; the enormous fortresses; the marvellous metal work, all these facts performed by the longdead race have puzzled every archeologist and no one has hitherto been able to explain by what unknown means they were accomplished. But to me, and now that I am about to divulge it, to you, the secret is known at last. All these great feats, my friend, were simple matters to my ancestors, for they, of all-men, had discovered the fourth dimension and the key to utilizing the forces of gravitation. Two years ago,

# DISCOVERIES OF DOCTOR MENTIROSO

in the unknown and unexplored territory east of Lake Titicase, I kenned of a ruined city from the Indians. There I went and found, hidden in the forest, the ruins of a pre-leared city of vast extent. In all Peru no other such ruin had ever been found, no other had remained so well preserved, for the remained unmolestical and free from looting and vandaliam for hundreds, perhaps thousands of years.

""IT HERE I set up my camp and for days studied the contacts scrings and increptions that covered: will, columns and monuments) iters, for possible of integrations in the studied of them, familiar as I was with the larguage of the of them, familiar as I was with the larguage of the rest the ground and threw down a massive piece of wall to disclose a holder chamber wherein were stored protections proof of the mere who case hold them stored and the mysterony ger-inten possible.

"Here, too, and most wonderful of all, was the key to the glypths, besides countless strange instruments and utensils; wonderful works in copper, bronze and gold : plans of the monuments, the fortresses and the walls which exist throughout Peru today, and here, as franctically, fascinated I studied the glyphs and records, I learned that my ancestors, fully twenty centuries before the coming of Pizarro, had mastered the secrets of the fourth dimension and of gravitational force and had harnessed them and by their aid had accomplished the seeming miracles of cyclopean work which we wonder at today. It would be of little interest and would be a long story to tell you all the details of my discovery, amigo mio. But to me, a descendant of that strange highly civilized but forgotten race, was given the fortune to learn the secrets and laws of nature which, centuries ago, had been discovered, and centuries later had been lost through wanton destruction of a nation. And herein, my friend, my ancestors failed. All they had learned they had applied to peaceful arts; never did it occur to them that the tremendous, the irresistible forces they alone knew, could be used against their enemies, that no beings could resist them. But I. I. Don Fenomeno Mentiroso, señor, I am not so blind. With the powers and forces I have rediscovered from the records of my ancestors, I have within my grasp that which will place my country forever beyond fear of conquest or of war. The united powers of the world might attempt to subdue or to humble Peru, but they would be as powerless as so many buzzing flies. Their navies could be destroyed, their armies wiped out, their artillery rendered useless, their aircraft annihilated as fast as they could be assembled : this could be done by means with which they could not cope. It is for that reason that I will never divulge my secrets. But do not think that I fail to realize the importance of my discovery to the arts of peace. But, greater to me is the importance of my accomplishments as a safe-guard to my country. I . . . "

"Yes, yes," I interrupted, seeing that my temperamental and patriotic friend was rapidly working himself into a fervor, and, Latin-like, would continue his oratorical talk indefinitely. "Yes, Don Fenomeno, my good friend, I can clearly see your point. It is indescribably noble of you and worthy of a son of the Incas. But let us leave this side of the matter for the present and confine curseives to a further consideration of the scientific and practical side of your most marvelloss discoveries." "Most certainly," he exclaimed. "Pardon me for

"Most certainly," he exclaimed. "Pardon me for so far digressing from the theme. Let me see, I was telling you of the power I employ and you asked how I happened to discover it, Now---"

"You have explained that," I reminded him. "And while I do not fully grasp all the technicalities of your twin discoveries or of your apparatas, I think understand the principles, although I adwit the whole affair is so alsolutely astonading as to seem incredible. And I freely admit that were anyone but incredible. And I freely admit that were anyone but ingly put him down as worthy rival of Baron Munchausen."

My friend rose and bowed. "Thank you, a thousand thanks to you, amigo, for the implied compliment," he laughed.

"But there is another question," I continued. "Did I understand you to say that you actually kod traveled around the earth on your, or in your secret apparatus?"

"You did, and I have," he assured me, "not once but several times, and each time my observations and records proved conclusively that my deductions and calculations were sound and correct, and that with the proper means at my command, I can go into the future or the past and can eliminate 'time' as you call it. Strictly speaking, of course, time is but a relative term, a mere arbitrary word, whereas actual time is a wave governed and controlled by the 'Esnesnon,' and is no more like your arbitrary conception of time and bears no more relation to it than oxygen does to water or nitrogen hears to nitrate of potassium. In other words, my friend, your socalled time is governed by the 'Esnesnon' while the true time, and by that I mean the phase of the vibratory time wave, is not in any way affected by your conception of time. Is that clear?"

"About as clear as mud." I grinned. "But if you have traveled about the earth at 11,000 miles an hour, how in the world could you see or observe anything while moving at that rate of speed?"

"OH, my poor friend!" he exclaimed pityingly. "Can you not grasp the fundamental truth that all things are relative? To you, a speed is great or small merely by comparison with your much slower motious and surroundings. Were you dropped from a thousand foot precipice, you would see nothing but a blurr as you hurtled earthward, but the condor or the eagle, dropping for thousands of feet, and at terrific speed, sees the smallest hird or animal and strikes it unerringly. And so, in an apparatus wherein your cloying, arbitrary time is non-existent, and surrounded and controlled by the fourth dimension, a speed which to you would seem incomprehensibly swift, seems merely a slow and steady jog to me. Indeed, though perhaps you will not believe it, my circumnavigation of the earth appears to me, at the time, to be no shorter than when, several years ago, I went around the world in one of the Dollar Line steamships. Not until I return and step from the fourth dimensional machine into the humdrum present, do I realize that the journey has consumed only an hour or two. Now if only you, too-""

"Nothing doing," I announced positively, before he could complete his sentence. "I'll leave it to you. But tell me, when did you make your last trip?"

Dow Fenomeno glanced at his watch. "By your time, I returned to Lima at 8 p.m. yesterday," he replied, as casually as though referring to a motor ride of a few miles.

"And at what hour did you start on this wondrous trip?" I asked.

He laughed. "At midnight, last night," was bis amazing reply.

"What?" I gasped. "What nonsense is this? You

He mixed his hand and checked one. "Takes you organize no constant all the catagois of payer you?" he of the second of the second of the second of the that, if you should travel eat-waved as a speed graties that all you should travel eat-waved as a speed graties of approximately 11,000 mikes per hours on a start of approximately 11,000 mikes per hours on a start at all the interpretention of a start of the second parallel difference in dispuse lowers may example and the actually being due to the first that ary reate does the actually being due to the first that ary reate does the earth."

I such back in my chair and rah my hands through my hair. "It's all the dremmiter, written tholgepolge, the most involved and incomprehensible thing I ever bard?" I cried. "Why, must have a similar of heating aright, and you're serious, then in an hour you'll start off and this morning as it serea-firity nord? be hack, and III be here at since and you'll tell be hack, and III be here at since and you'll tell again, and ... why concloud it but it, it has true, today? By on forever or ..., good Havera, it makes my head rel to think about it."

Doctor Mentiroso laughed heartily. "My dear good friend," he exclaimed, "Do not he so perturbed about it. You forget that you are talking and thinking of arhitrary time, whereas I am referring to fourth dimensional, or real time. No, my friend, though by your time I may set forth at half after eleven today and return this morning at seven thirty, yet by actual time I set out and returned at precisely the same moment of your time. No-be patient a moment, for there are many puzzling features of the matter, some of which I confess I have not fully mastered myself as yet. But it is obvious, amiga mio, that did I actually arrive at seven thirty this morning from a trip on which I am to start out four hours after I arrive, then I certainly could not he present in the interim. But I propose, my friend, that you witness a most interesting experiment which, if I am not mistaken, will convince you of the soundness of my statements. You can be of great help to me then.

"I In gladly do anything within reason to help you," I assured him, still a bit dazed at the nightmarish problems his words had started in my mind. "But I'll do nothing rash, and I will not try any stunts in that mad machine of yours. For that matter, I'm beginning to think its all bosh and you have no such machine."

"I'll non convince you of that," he decined. "But but I to at 20net a side of you is a short reads any of the side of you is a short reads and you of the physical set of the side of the side of the set of the departure and return and check up on the phenomenatic and the side of the side of the side of the side of the physical set of the side of the side of the side of the physical set of the side of the constraints of the side of th

"Gladly," I declared. "Come, show me your 11,000-mike-an-hour machine and hop off for a trip around the earth, and I'll wait and time you. You can't keep up this joke much longer, old man."

Once again, Don Fenomeno smilled in his oddly superior way and rose from his chair. "Very well, my good friend," he remarked. "I think within a few moments you are due to have a rather astounding supprise."

He led the way through a heavily barred and padlocked door to a large windowless room, or rather, I might say, an open court enclosed by high massive walls. In the centre, and resting on a sort of pedestal of black stone, was an elliptical or egg-shaped contrivance of a peculiar bluish color, reminding me of blued steel, and about thirty feet in length by eight or ten feet in diameter. I regret that I cannot give a detailed description of the thing, for one of the conditions on which Doctor Mentiroso insisted before granting me permission to make public his discoveries, was that I should omit all detailed descriptions of his apparatus or its mechanism. I may state, however, that the exterior of the machine was covered with spiral flanges or bands, so that it had somewhat the appearance of a gigantic screw; that several pyramidal or mushroom-shaped projections broke its surface, and that it had no wings or planes like an airship.

"This," announced my friend, "is the machine which I referred to,"

"It appears to be a machine all right," I admitted, "but it certainly does not appear capable of rising or of progressing, and even more certainly not at any such speed as you claim for it."

Done Ferrommon langheat. "Appearances." he reminded me, "are offen very despirite. But as you asy in English, "the proof of the padding is in the eating." In a few moments, my rifered, you will change your mind. And the me forewarn you; you may witness some rather disconsering events has you need not be either surprised or aharmed at anyminates of the time for any dynamic. Will you, amajoe wise, stand here and time me in my flight around the earth?"

"Gladly," I replied, "provided your flight does not consume too much time. For I have not eaten lunch as yet, and if you are not back within an hour or two —and I haven't the least expectation that you will be —I warn you that my appetite will overcome my curiosity and I shall go out to est."

"You will not have to go hungry long," he de-

# DISCOVERIES OF DOCTOR MENTIROSO

clared. "Even if you are right, it will be a short time before I return."

"That is, if you go or return at all," I asid. "But let us get this clear. You chain you'll return before you start or at the same time, which I claim is manifestly impossible; I claim that, granting there's no fake to all this and that by some incredible-means you can fly around the earth in that contraption at the speed you state, you'll be back here in approximately two hours. Am I right?"

"Absolutely," he agreed while he approached the mechanism and stopped to examine some knobs and dials on the black rock pedestal. "Would you mind he asked, "standing about here. You'll he better able to witness some of the phenomena which may take place," He indicated a step leading to the pedestal. It was, as he said, a fine point of vantage, and anxious to' make sure that there was no trickery about the matter, despite my faith in Don Fenomeno, I took my place as he suggested. Smiling, my friend then stepped to bis machine, climbed upon it, and opening a sliding panel, stepped within. "Don't leave until I'm back," he cautioned me, as with only his head visible he prepared to close the door. "It's important for you to remain exactly where you are. You see," he added as if in explanation, "I cannot be a witness of the phenomena and I want you to tell me about everything that takes place. Now take out your watch and time me, for I'll be off in a liffy."

A<sup>S</sup> he spoke, he ducked into his machine and drew the panel shut. Wondering what, if anything, would happen next, I glanced at my watch and found it precisely eleven thirty. As I did so there was a strange roar from the machine before me; a sudden wind seemed to sweep with terrific force across the courtvard ; I swaved on my feet ; my head swam dizzily : I had the impression of being hurled over and over, and then, as suddenly as it had begun, the noise ceased, the air was calm and still and my head cleared. I glanced at the pedestal and stared with unbelieving eyes. The egg-shaped apparatus bad vanished ! It was true then ! My friend had actually taken flight in his strange machine. Undoubtedly that explained the rush of air and my sensations, for assuredly a mass of that size could not have hurtled upward at over ten thousand miles an hour without creating a terrific vortex in its wake. Hardly had these thoughts rushed through my brain when once more the blast of a hurricane roared about me; I clung for dear life to the stone pedestal; for a brief second I seemed to lose consciousness, and, as before, the wind ceased, my brain cleared, and as I raised myself from my recumbent position I almost cried out in amazement. Before me, and resting within six feet of where I stood, was the bluish, ovoid thing into which Doctor Mentiroso had vanished. It was incredible that he could have some far in the few brief seconds which had elapsed. No doubt, I thought, he had had trouble, or had returned for some other reason, and I momentarily expected to see him emerge from the thing. So great had been my excitement and confusion that I had completely forgotten to look at my watch. A glance showed me, however, that less than one minute had elapsed !

The next second the slide in the machine opened, Don Fenomeno's head appeared, and as I stared at bim, he sprang from the machine. As he did so, a sudden wave of darkness second to carvelop me; I had the terrifying sensation of having gone bind; and with a sharp cry I put whands to my cyce. Instantly, it was full sudight once more, my friends laugh sounded in my cars, and I looked up to find him standing beside me with a triumphant smile on his face.

"Well, what think you now, amigo mio?" he exclaimed.

"I think I'm mad," I replied. "Do you mean to tell me-"

"That I have again circumnavigated the old earth?" he chuckled. "I certainly do, my friend. But what time did I return?"

"At eleven thirty-one, if you actually did return," I replied.

"And will you kindly glance at my watch?" he asked.

"Great Scott !" I ejaculated. "Yours says 7.38 !"

"Assuredly," was his calm response. "I returned from my little jaunt approximately six minutes ago, or at 7.32 a.m. In other words, four hours before I started, and we are now conversing easily although 1 am in the past four hours while you are in the present, or else I am in the present and you are four hours in the future."

I sank limply upon a settee. "If you keep this up I'll be hopelessly mad, if I'm not already," I gasped. "It's all too involved for me and I believe it's some devilish hallucination anybow."

"Did you not see me start and return?" he asked.

"The Lord knows," I cried. "One instant your contraption was gone, the next instant it was back. It was nearly blown away by a cyclone. I seemed to be whirled topsy-turvey; I've been temporarily blind, and I know it's absolutely preposterous for you to claim that you flew around the earth in one minute."

"Less than that," he corrected me. "You were an tiffe confused, lexpect, and freque to look were an watch the moment I arrived. I might add that, for a moment or two, you were partially in the fourth dimension. You madvertently stepped away from the spot where I posted you. It's a bit laddy you didn't go farther or I might have had trooble in setting you hoke."

I was too stummed and nonplussed to speak. It was all too thoroughly ridiculous and impossible. Somehow, I was sure that my friend had gone hurtling through space, and yet I could not credit it, and I could not account for my peculiar zensations or why his watch should have leaped back four hours. Still, his explanation could not. I fort he true.

"LOBK here, Don Fenomeno," I exclaimed at Lob Lat. "It's utterly preposterous for you to claim you have traveled twenty-four thousand miles in one minute or less, especially when you yourself claim only eleven thousand miles an hour for your machine. That would mean over two hours at the best."

"But, my dear sir," he replied. "You forget that you are talking arbitrary time. According to that time absolutely on appreciable period elapsed between my start and my return, whereas, if you wish to argue along the lines of true time. I might point out that I encircled the globe in four hours less than nothing of your time." "But I don't admit that you have proved you encircled the globe," I persisted.

"Then you are all unconvinced," hashed Dow Phonesson, "15, I downs, lot runs that I passess personana, "15, I downs, lot runs that I passess centure or 1 abuilt despite of cowheng you. How haves to show Crathay. II a testing labout haves knowledge of events transpiring there. Let us any show the testing of the show that the label of you in infrated half is the new register of hulffighter, a metador known is Manuelly, who was passed through Calcuta a for was register. The was passed through Calcuta a for was register or the show and the show the show the show the show the passes of through Calcuta a for was register.

I laughed. "Of course you can say that," I replied. "But how can you prove that such occurrences took place?"

"Early enough," he responded. "We will harry to the rable office and see what foreign news has arrived. And if my statements are verified, I am sure that even useh a doubting Thomas as you, my friend, will be convinced. Most assuredly, you must admit that unless I had actually here an I harredona and Calcuta I could not have known what was taking place there."

In a few moments we reached the office of the "All Averics Cables" to find a low just attaching the latest cabled news to the bulletin board, and as 1 read the heading of the upperrors taket, my head fairly rected and 1 stood gaping in astonishownt. There, uministability, was the announcement that as the final hull of the afternoon was about to be slidled by the favorite matshedry. Manuelito, the man had allypsed on a pool of blood and had' instantly here charged and gored by the infuriated hull.

Doctor Mentiroso's self-satisfied chuckle hrought me to my senses.

"Aff" he exclaimed. "So you do believe I was in Barcelona this evening. If I am not mistaken, my statement regarding Calcutta will also be verified in a moment. Here comes the boy with another, sheet."

This time I was scarcely surprised as I read the outstanding news on the latest bulletin, for I had almost expected it, but as I read the account of the disastrous dock fire in Calcutta I had the strange sensation of being in a dream.

"I admit it, now," I muttered, as I turned away. "Phu I still feed that the thing is impossible and that it must all be a dream. But man I I you really can do these things, you will be the most fanous and the richest man on earth. Why, there is no limit to what you may accomplish. Think what it will mean to commerce, to civilization, to linking the nations of the world together !"

Doctor Mentiroso shook his bead and amiled sadly. "I realize all of this," he said with a sigh, "but it is not for me to profit hy my discovery, As I said before, I shall keep the matter a secret, a secret known only to you and to mysch, and to be used solely for my own sichmific investigations. And if my beloved country should he threatened by a foe, it can be used as a means of national defense."

"But you are robbing mankind of the most astounding and revolutionary discoveries ever made," I protested. "Surely you could manage to keep the details, the processes of your inventions secret so that Peru's enemies could not construct similar machines."

"That would be impossible," he declared. "Did you ever know of any national secret heing kept from an enemy? No, amigo mio, only by kepting what I know locked in my own brain can I hope to hold the key to the situation. But I cannot resist the fascingtion of the situation and the situation of the situation fourth dimension, and in data way I hope to discover facts which may be used for the henefit of my fellow men."

"White," I asked him, "do you propose to do next? You have proved you can conquer time and space. I shall no more question your statement that you have discovered the fourth dimension, nor shall I doule that you have harnessed the forces of gravitation. But what more can you do? I can scarcely see what new facts you can discover regarding the elimination of time."

"Ab, there you show the layman's lack of imagination and ignorance of the possibilities of science," he exclaimed. "As yet, my friend, I have but touched the fringe of the unknown. I am like an explorer about to enter a new and unknown land. I have entered the outer fringe of the territory but I have yet to plunge into the mysterious depths before me." "I confeas," I deckard, "that I do not get the drift

"I confess," I declared, "that I do not get the drift of what you are saying. It seems to me that, as far as exploring is concerned, you might go on flying around the world forever and ever and really find out nothing that you do not already know. Now if you should test your machine for ..."

"Around the earth!" he cjacqlatel. "Sturyl you do not insight that I intend to online my observations to circumnavigating the global No, it is the realm of space I ability space of the provide the staring of the start of the space of the start of the into the future for an hour or two, just stap and think what it may reveal fit I thread through the earth's oright make by busing our traversitial globa around where I now gain hours. I could have the innermost secrets of time, of the past and of the future, I..."

I stopped in my tracks and stared at him. "Surely," I cried, "you are not serious in this. You surely do not intend to attempt to leave the earth's atmosphere on any such mad fool's errand."

"Why not?" he replied. "Is it any madder, any more impossible than you thought my statements of an hour or two ago? Yee, my friend, I not only inted to attempt such a journey, but I start today, this very afternoon, and you, alone of all men, are to witness the first departure of a human being for the uncharted, unknown realms of space." "And If,"I saked, "you should acceede in hurting

"And if," I asked, "you should succeed in hurring your confounded machine through space without killing yourself, when do you expect to return to relate your experiences?"

Doctor Mentiroso was silent for a space, evidently thinking deeply. Then taking a note book and pencil from his pocket he made some rapid calculations.

"If I am correct in my deductions and my apparatus does not fail me, I should be back here in Lima, in the early part of the year 1809," was his amazing statement. "What?", I almost shouted. "You'll be back in 1899! And this is 1926!"

"Of course," he chuckled. "If I can encircle the globe and get back to my starting point four hours before I leave, why shouldn't I tear of through space, follow the earth's orbit around the sun and get hack twenty or thirty years before I start? Or if I reversg my direction, why shouldn't I go an equal time mito the future ?"

"I'll he hanged if I know," I admitted. "But for my part I'd far rather remain in the present."

"But you will he present when I leave, won't you?" he hegged. "I want some witness so that if I should return in the future or the

past, there won't he any question as to when I started."

"I suppose I'll have to," I told him. "But I'm not approving it.".

By this time we had returned to Dos Fenomeno's house and he was leading me to the enclosed court with its strange time-defying machine. I was, I think, in a sort of date, for otherwise I cannot account for my action in countranneing his mad scheme. But the astounding things I had

heard and seen had had an almost hypnotic effect, and scarcely realizing what he was about to undertake, I saw him approach the apparatus, draw hack the slidling panel and prepare to enter.

"You need not worry over my physical welfare," he remarked. "Twe heen preparing for this trip, and I am well provisioned, though I do not helieve food is essential in the fourth dimension."

"I suppose," I remarked dryly, "that as you are going several years into the past, the food which you ate for the past twenty years or so will serve just as well." "Something of that sort, perhaps," he grinned.

"Something of that sort, perhaps," he grinned. "And now, please record the exact time when I leave. Good heye, amigo, wiso, I will not sak you to await my return, but I'll notify you at once when I'm hack. I'll have some very interesting information to inpract. I'm sure."

"CUULD scarcely be expected to wait back at score of years," I reminded him, "and I agree with you that if you do return, you will most certainly have an ahandant mass of interesting information. Personally, though, I feel that helt you and your discoveries are lost to science and the world from this moment."

"I'm sorry you won't accompany me," he declared, ignoring my caustic remarks. "Well, once more, good friend, 'Adios, or perhaps hetter, hasta luego, for this is an revoir and not good-hye."

I leaped forward and grasped his hand and bade him a warm farewell. Then, suddenly remembering

that I might he within his damnahle fourth dimension limit, I sprang back and away from the black stone pedestal. The next moment the panel had been closed and he had disappeared within the machine. Recollecting my former experi-ence, I hurried away from the machine, hut hefore I had taken ten steps, I was swept from my feet hy the rush of air I had felt before. Glancing about as best I might, I saw that the machine with Doctor Mentiroso had vanished

Despite the fact that I was not to await this return, I felt compelled to remain within the court, and torn by a thousand conflicting emotions. I maintained my lonely vigit throughout the night. Indeed, for weeks I visited the place daily ach time hoping against hope that the strange needs upon it needstal. But Don Fenomeno has not returned.

But still, though my common sense tells me he has gone forever, I cannot rid myself oi the convection that some day my Peruvian triend still sweep down tiumphantly from his journey through space. But perhaps, he really returned twenty-seven years ago. To this diy, I do not know whether he was asserious or was merety joking, when he spoke of returning in the year 1809.

THE END.

# What is the Answer?

MOW that you have read the Astonading Distortion of Dr. Mentiono, you soil count to take a dep breach and count of Dra arr. No to be a set of the breach and havena, your head must be in a spectre at all havena, your head must be been as a set of the set of the set of the what is fast and updat is for fast any part, what is the answer to Dr. Mentirosoft appending encert

Perhaps you can famere it out yourself, but it will take you quite a while before you hit if the solution. At any rate, you may with to discuss it with your friends for a month. It will make excellent discussion. The answer will be published in the December issue of Amazing Strapps. 759

Part II

# CHAPTER XII

The Crime Trust Retaliates

NUDGED Fleckner's shoulder sharply. He awoke with a start.

"Humph ! Been askep !" he ejaculated. He glanced at the clock

"Four o'clock! Dozed pretty nearly a half-hour! Three thirty when I looked last. How long you been out here? Anything happened?"

He looked at Chandler's restless image first, then at the section of mountain road. He, too, rubbed his eyes and looked again. Then he leaped to his feet excitedly.

"Where's the van?" he demanded, "You and Priestley been up to something?"

He whirled on me accusingly.

"Priestley is presumably still asleep," I replied coldly. "I just came out

of my room. At any rate we could hardly have engincered the stealing in the few minutes you've heen asleep, even if we could have done it without waking you." But he seemed still sus-

picious of us. He tiptoed over to Priestley's room and looked in. I followed. I confess I wondered a little, preposterous as the

NOW every one's business, know every one's secrets K know what goes on behind closed doors, know what the confidential files of business houses and those of the government contain, and you will have-panic, cheos, and worze. Hawan beings are not yet so constituted that they con allow prying into their private offairs. By means of Professor Flechner's "Telephonoscope," wherby it is possible to see through walls, television fashion, a unione situation was created, such as has never before been revealed in literature. If you were thrilled by the first installment, you will be fascinated by the closing chapters.

healthy exhaustion. Fleckner shook him roughly and when he was awake told him what had happened But he did not repeat the imputation he had hurled at me in the first excitement of his discovery. Priestley's astonishment seemed too genuine to be simulated.

Priestley came out, and under Fleckner's directions we each took a ray and made a systematic search of the hills all about the spot where the van had stood. The ground was frozen, and there was no snow, so we had no tracks to guide us

At daybreak we gave it up and sat in discouraged discussion of many possible theories. My suspicions of the girl I kept to myself without knowing exactly why. Perhaps it was my consciousness of their vagueness. Possibly it was natural chivalry. It may have been the lingering appeal of a pair of violet I suspect it was all three. At any rate I eves. contributed no suggestions of value, and neither of

the other two thought of Miss Stimson in connection with the vanished van.

Fleckner was inclined to fancy some belated motorist had discovered the van and salvaged it. In that case, if the finder was honest, he would advertise his find. It would make a most sensational news story, the finding of two million dollars out on a lonely road without a

it. But Priestley was sleeping the sound sleep of

idea seemed, if Priestley could have had a hand in guardian. It would become even more sensational when it developed that no one had missed this tidy little sum, and that there were no lawful claimants for it.

Of course if the owner were dishonest he would hide his treasure-trove, and in the course of time try to use it. In that case he would doubtless give himself away eventually.

Priestley, however, stubbornly clung to the belief that Chandler had somehow got word to a confed-erate while Fleckner slept. That man, he believed, had flown out in a swift plane and taken the van to a safe hiding-place where it would await another attempt by the chief.

"That we'll be able to determine as soon as Chandler gets back in touch with his men," the professor decided

At eight o'clock Miss Stimson returned to her duties as usual. There was no hint in her manner of any remaining embarrassment over the occurrences of the night before. Her green shade was in place again, so I caught no more glimpses of her disturbing eyes. Fleckner greeted her rather curtly, and Priestley with a politely impersonal inquiry as to her health.

But we were immediately afterward engrossed with Chandler's movements. He went back to town on the 8.30 train, and at 9.30 was closeted alone in his office in his town bouse. Immediately he went into the telephone booth and turned one of the secret rings. Fleckner swung on the directionfinder, and a moment later switched one telephonoscope ray on the little private dining-room where the telephone bell was ringing merrily,

Chandler, meantime, having started the call to the Riccadona, came out of the booth and began pacing the floor.

A few minutes later a waiter at the café, passing down the corridor, heard the bell in the private room. He went in and pressed, a button at the side of the instrument and the ringing ceased. At the same instant the phone in Chandler's office gave one sharp ring, evidently a signal that his call had been noted.

The waiter at the café hurried downstairs and to the desk.

"The other bell is ringing in No. 9," he said, and departed on his duties

The cashier went into the phone booth back of him and called up Judge Tanner at his chambers. "This is Tom," he said. "Your reservation for

"This is Tom, No. 9 is O. K."

Judge Tanner hung up the phone, put on his hat, and fifteen minutes later was in No. 9 at the Riccadona.

"An ingenious system for getting in touch with his gang at almost any time," Flockner commented. "He didn't dare use it when he got in last night. ] suppose, for fear a too unseasonable hour would arouse suspicion."

Tanner went through the form of ordering a breakfast, and then connected with Chandler's study by the wall phone. Chandler looked his intense relief when he found himself again in touch with his chief aid.

"The goods arrived at No. 20 on time, and the man in charge left after getting the signal, as agreed," Chandler related. "But the man sent to get them was trapped, and had to clear out and leave them.

"Some one jumped out of the bush and another

voice, sounded like a woman's, he said, called for him to stop. He barely escaped. I don't think he was identified, but I didn't dare order a move for fear we'd been betraved and would be caught. Send a discreet tracer over the road to see if he can locate the goods. Don't have him make a move to claim them unless it's perfectly safe. There may be a trap there. Set another tracer after the traitor.

Chandler hung up. The professor looked at Priestley triumphantly.

"What did I tell you?" he remarked tauntingly. "You see Chandler is as much in the dark as we are. I wonder, now, what could have happened to that van."

He looked speculatively through the open door to where Miss Stimson sat bent over her notes. I was afraid for a moment that he might be about to question her, but Judge Tanner claimed his attention.

The judge had connected with the underground clubroom and repeated Chandler's news to one of the black-robed brethren who immediately busied himself with a series of cryptic calls. As a result a swift airplane left an up-town hangar an bour later, its passenger an innocent-looking traveling salesman for the New York Sun Motor Company. He flew over Puinam County back and forth for hours at a three-mile level, his plane blurred by a thin screen of vapor, scouring the earth with a powerful field-glass.

At the same time the New York State Agency for the Heatless Light Company decided suddenly to put its field force on for an intensive house to house campaign in Putnam County. Every canvasser, our records showed: was a member of the crime trust.

Also, during the day, word was sent in cipher to every district representative in the country, and the dragnet was thoroughly set for the missing van.

Meanwhile we, as well as the agents for the trust, were scouring every edition of the papers for a story of the finding of a mysterious van loaded with treasure. But the day passed without news, and the day lengthened into a fruitless week. The judge took all his meals at the Riccadona, and had long conferences with Chandler, which brought them nowhere,

During all this time the trust company continued doing business without the slightest suspicion of its loss

At length, on the eighth night after the disappearance of the van. Tanner got a call from a man in the secret clubroom who was a new one to us. Apparently, from the conversation that followed, he was in charge of a section appointed to ferret out and punish traitors. In the confusion of trying to watch all the complicated communications sent out the day after the robbery, we had evidently overlooked this particular thread in the tangled skein.

"We think we've located a traitor," this man declared. "We haven't positive evidence, but it's pretty strong. We believe he knows nothing of what became of the van later, but probably he had a grievance and tipped off the State police, who nearly caught the man sent to meet the van. We believe the police are keeping the facts from the public, hoping to trap us."

"I'll call you back in a few minutes," said the judge

Then he switched to Chandler and reported. "What do you recommend?" Chandler asked.

"We'd better take no chances," the judge advised. "Suppose we're mistaken. Better to sacrifice an innocent man than run the slightest risk of having the lot of us caught."

"You're right," Chandler agreed. "Use your judgment."

Tanner switched back to the detective.

"The order is to take extreme measures," he re-

The detective left the phone booth and strolled about the main room. After a moment he jogged an elbow of a man he passed, and a few minutes later met him in one of the little council-rooms.

"No. 72 is condemned," the detective said laconically

"I'll attend to him at once," the other responded in a most matter-of-fact tone. "Any idea who he

"Not the slightest," replied the other. "That's for you to find out."

"I'll shoot a little perfume into his clothes and identify him outside

"Very good !" agreed the other. We all sat chilledwith borror as the sense of impending tragedy dawned on us.

Priestley was the first to speak. "This is murder!" be gasped. "We must stop it." "We'll have no exposures at present," Fleckner declared sternly. "We've mixed things up enough already."

Priestley remained silent, but I knew he was un-

The executioner roamed about the main room until he came upon No. 72 standing in a little group about a billiard-table watching a game. The executioner had taken from his pocket a small atomizer filled with a colorless fluid. Holding this in his hand under his robe he casually walked up behind his victim, and pretending to become absorbed in the game, placed the nozzle of the atomizer against the other's back and pressed the bulb.

"Carrying odors is the one thing the telephonoscope won't do," Fleckner remarked

The scent must have been a delicate one, for no one about the billiard-table gave any signs of noting an offensive odor. The executioner strolled away after a moment and a little later signaled another man to one side.

"I've put the scent on a victim," he whispered "Go up and stand at the store end of the exit. Trail any one who comes out that way with the scent on his clothes. I'll take the other exit.

The executioner then left the club, appearing presently in ordinary clothes on the sidewalk in front of the rear entrance to the little tobacco shop. He was a dapper-looking, blond young man, having the appearance of a gilded youth with nothing, on his mind. Presently his assistant, a pale dark fellow, rather slouchily dressed, took up his post in the

It was over an hour before No. 72 einerged. He went directly to the street, almost brushing against the dapper little man who had been ordered to kill bim.

The executioner gave no sign of noticing the heavy, uninteresting-looking stranger who walked by him and down into the street, but we noted that his nostrils dilated and his eyes gleamed with satisfaction. He crossed the avenue leisurely, and keeping his prey in sight, strolled along in the direction he was following

"Do you mean to say you refuse to prevent a murder?" Priestley demanded, fiercely turning on Fleckner,

The professor winced a little, but held his ground.

"I absolutely refuse," he said. "There is nothing we could do that wouldn't give us away now and spoil our future plans. It's too risky. Anyhow, the fellow deserves death."

Priestley stood over him with clenched fists, his face a blaze of fury.

"I warned you once before," Fleckner interposed hastily, "that if you resist me it will be disastrous to your fortune and your reputation, as well as to the good you hope to accomplish in the world by your investment

I fully expected to see Priestley defy him at any Instead, after a moment, he pulled himself cost. together and turned on his beel. "Very well," he muttered. "At any rate I won't

stay and see murder committed. I'm going out for a while till it's over."

"Good !" Fleckner exclaimed in relief. "You've stuck too close here. Your nerves are unstrung. Better run home and get some sleep. I'll call you if anything interesting happens."

Priestley went out without another word.

I had a flecting thought that we ought to keep Priestley covered by one of our rays, but checked the idea without voicing it. Such a suggestion to Fleckner might seem to indicate suspicion of my new friend. Anyhow, the professor and I had about all we could attend to alone. Miss Stimson was in the other room catching up on some neglected records, which left only two of us to keep the ramifications of the trust plot on the screen at once.

I wished many times afterward that I had obeyed -my impulse to trail Priestley.

Meantime the victim of the trust's suspicion continued on to his bome a few blocks down, went in, and after a little, to bed. His shadower, after carefully studying the surroundings from the outside, entered the apartment-house where his victim had just disappeared and said to the hall attendant :

"I came to call on some one who I think just came in-the thick-set dark gentleman."

"You mean Mr. Gersten?"

"Gersten? Doesn't seem as if that was his name. I met him only once and I've lost his card. I have a business appointment with him. What apartment is he in?"

"Sixtieth floor, apartment 21."

"Oh, that's not he, then. The man I'm after lives on the thirty-first floor. Isn't this apartmenthouise No. 1,239?"

"Oh, no, it's No. 1,241."

"Ah! I've mistaken the house." He went out hastily with the information he sought. Apparently the blow was not to fall at once, for he took the subway, and a little later reached his own home and went to bed.

But here again our vigilant rays missed something, as it turned out later.

Fleckner, seeing no likelihood of any more excitement that night, left one ray fixed on the sleeping form of Gersten, alias No. 72, another on the underground club, and a third on Gersten's would-be executioner. Chandler and Tanper of course also held a place on other sections, but they, too, were asleep.

Fleckner stretched bimself wearily, looked at the clock, and called Miss Stimson,

There was no reply. "She's gone some time ago," I remarked. "It's long past time."

She should have spoken to me before she went." he said irritably.

At that moment a door slammed outside. There was a clatter of feet in the ante-room. The laboratory door burst open and Miss Stimson burled herself in.

"They've got him! They've got him!" she cried. We sprang to our feet in astonishment. "Got whom? What do you mean? Who are they?" demanded the professor.

"Mr. Priestley-he tried to save Mr. Gerstenthe trust caught him and took him away in a cab -I tried to trail it-lost it !"

She sank to the floor in a faint."

#### At Grips With the Crime Trust

TE stared in doubt and amazement at the limp figure of the girl. Then by common impulse we searched the screen to verify her startling announcement of the kidnaping of Priestley. All was quiet around the apartment house in which Gersten, the condemned trust agent, lived. There was no sign of disturbance in the apartment itself. Gersten was still sleeping peacefully without any appearance of having moved since we last looked at his reflected image.

Fleckner began frantically trying out all the telephonoscope connections we had-the young assassin chief in his home, the underground club, even Chandler. No sign of activity. He even swept the ray up and down the quict streets radiating from Gersten's home peering in every taxicab, hoping to find the one in which Priestley had been taken prisoner. But that was a futile proceeding begotten of panie and he quickly abandoned it

Certain it was that Pricetley had not arrived home. He made doubly certain of that by searching the house and calling the drowsy butler on the telephone.

Meantime, I was doing what I could to restore the girl to her senses. She revived presently, but it was some time before she could tell a coherent story. Even then she was strangely reticent and evasive at some points in her narrative

"I heard Mr. Priestley arguing with Professor Fleckner about trying to keep the trust from murdering this man Gersten," she said. "When Mr. Priestley went by my desk something in the way he looked and walked made me think he was going to try to interfere with those murderers all by himself I knew he would be in great danger. I thought I might help him or at least warn the police if necessarv

"I followed without his knowing it. I don't believe he knows me anyhow with my hat and coat on and my eve-shade off. He went to the public phone booths on the corner and called up Mr. Gersten. I listened in. I can't tell you how I managed it. learned the secret when I was a telephone manager before I came here. Do you know that Mr. Gorston, this No. 72 we've been watching, is an old iriend of Mr. Priestley?

"'Hello, John, this is Tom Priestley,' he said when he got his connection.

"'Why, hello, Tom,' Gersten answered, 'where you been keeping yourself and what do you mean pulling a man out of bed this time of night?"

"'Listen, John,' he said, 'your life's in danger. I've just overbeard a gang you've got mixed up with plotting to kill you. They think you've been betraying them. They're watching your place now. I can't tell you any more. You'll know best how to handle it. I advise you to call up the district attorney himself in the morning and get protection. Stay off the street. You'll know how to handle it better than I, anyhow. You know the gang. I'll help you if I can. I think I know a way. I can't tell you more. I'm surprised to find you're in with such a gang, but I can't see you killed!" "But," Fleckner broke in, "Gersten didn't talk with any one on the phone. We've been watching

him right along. He's been asleep

"Then it's just as I thought," the girl exclaimed. "One of the trust tapped his phone circuit with an instrument as soon as they located him at home, He disguised his voice and answered instead of Gersten when Mr. Priestley called. That's how they trapped him.

Mr. Priestley came out of the telephone station and started to walk back here. I watched him from across the street. A man hurried along hy him in the same direction and must have suraved an anesthetic in his face, because Mr. Priestley stopped suddenly and staggered. The strange man turned and caught him before be fell. Just then a cah whirled up. A man stepped out and helped the other man put Mr. Priestley in the cab. Then they both got in and drove away. I started to scream, but saw a policeman coming and knew I mustn't attract the police. They'd kill Mr. Priestley right away if they thought the police were after them. As it is they'll keep him alive for a while and try to discover what he knows. I couldn't find a cab to follow in so I came back here. That's all, but you must find him quick. You must !

She showed signs of becoming hysterical. We tried to question her, but all she would say was-

"Get your rays to work. Don't bother with me! I don't know any more."

There seemed to be nothing to do but follow her advice. But though we searched for the rest of the night we accomplished nothing more than to verify Miss Stimson's belief that the trust agents had killed the telephone antenna connecting with the instrument in Gersten's apartment by the use of a high power wave sender which burned out the delicate connections. They had then evidently tuned their own outlaw instrument into the same wave length and, as she had surmised, answered his calls. We tried the expedient of calling up his number, but apparently the listeners-in now suspected a trap and refused to answer.

At half-past eight in the morning our screen showed Judge Tanner appearing for breakfast in the private dining-room at the Riccadona. Immediately he called the underground club and got a report from the assassin chief.

"I identified No. 72 and bad him trailed. He'll die a natural death within tenety-toor bours if you say the word. But something happened again. Things are going wrong and if's getting on my nerves. I'm even baginning to wonder if 72 is guilty. Anyhou he isn't the only one. You know young Tom Pricetley, the Prisetley millionaire? Well, it seems he's a friend of 72 and tried to call him up hat last night and warn him. We cut in and campb Prisetley and are holding into tor orders.

"The question now is, is Priestley a member of the organization? If he is he's a traitor. If he isn't then there's a leak to the outside and we've got to find it and see how far it's gone and kill as many people as is necessary to stop it or our whole game is up."

Judge Tanner turned pale and trembled visibly as he got this startling information. He thought for some moments before replying.

"I'll call you back," he managed to say at last.

He cut off the assessin chief and rang on Chandler. In a halting manner strangely at variance with the suave judge's usually assured address, he broke the news to his unknown chief who was hardly less affected by it than his subordinate.

"This connects up with the disappearance of the variation of anonexy." Chandler nummated. "If is a deeper plot than we thought. Tell your men to keep this Prinetty alive ill they're go all they can out of him. **Find out**, if possible, if he belongs to the organization. Try the sugreme sign on him. No use to try tracing back through the recruiting chain. Every number through the recruiting chain. Every number through the recruiting the first the most part. Get at it quick. Meanime let 21 live ill thin is cleared up."

Tamore transmitted these orders back to the asassin, who promptly left the clubroom. We followed this fellow closely all day with our ray, but kerned nothing of Priseily's whereabouts. He talked with numerous people and telephoned freal members of the truth used eccessive precountons. All communications were strictly in a code and quite different from the one the had perviously unraveled.

By evening we were in the depths of despair and alarm. Protessor Fleckner and I managed to preserve a moderately calm exterior, but Miss Stimson was frankly hysterical over the situation. We sat in the laboratory by the telephonoscope screen all that night, doning at intervals from sheer weariness but for the most part trying many new but fullei angles of lasrning Pristley's whereabouts and effecting a rescue.

I was all for trying a scheme of scaring some one of the members higher up in the trust into revealing Priestley's hiding-place, by using our ray projector and presenting one of our images, carefully disguised, to the right man.

"But," Fleckner objectel, "whom would you approach? Chandler? Tamer? Any of the others whom we have identified positively as concerned in Prietelys' dissoparance? I doubt if any one of them, even the chief assassin, knows where he is, Taut detail has been left to agents whom we haven't placed yet. If any one, excepting Chandler himself, was frightment into triving to find Priesley. they'd simply kill him and Priestley's jailer. Then maybe your suggestion might work. Failing that, Til iry the lever on Chandler. I'm not hopful of the result. Conditions aren't ripe yet for a direct approach to that gentleman, but we can't afford to risk leaving Priestley with them until he breaks down and grives us all ayaya".

I had a feeling as he spoke that the old man was more concerned for his own safety and the success of his schemes than he was for Priestley himself. Nevertheless his argument appealed to me as sound.

It was nearly eight in the morning when I awoke with a start, after a longer doze than usual. Miss Stimon had arisen and crossed over to where Profeasor Fleckner sat moodily studying the screen. Her hysteria had passed. There was in its place an air of calm deterministion.

"Professor Fleckner," she announced coolly, "I'll release Mr. Priestley."

"You!" he shouted in amazement.

"How?" I demanded.

"I can't tell you how, not at present anyhow. Just let me go for a while. Meantime keep Mr. Chandler covered closely. You remember he is to be out at conferences all day to-day."

She went out before we recovered sufficiently from our amazement to make any comment,

"What do you make of it?" Fleckner demanded. "Is the girl crazy? She's certainly acted strangely ever since that night when she warned Chandler away from that van-load of money."

"I don't know," I admitted. "I do think she ademites our friend Priestey greatly and his danger may have unbalanced her a little. I think it would be wise to keep one of the rays on her while she is out. If she goes wild allogether we can warn a policensa to take her in charge and pay no attention to what she says."

"Good idea," he agreed.

He got Miss Stimson on the screen before she reached the street. We watched her progress from then on with such absorbing interest that it became almost impossible to keep our other rays adjusted properly on all the persons we were trying to watch at once.

The girl weht first to her home in an apartment & few flocks sway and when alse came out again sho was wiled and drawed to differently that it was hard to recognise in her, the demure little office mouse of the green systaked. She went by subway up to the strete ormer nearest to Canadler's home. There alse ascended to the upper street level and a poitton in a public telephone street or level and a option in a public telephone station opposite the Chandler home where she could watch it through an open window.

In a little while the President-elect came out, got into his car and was driven away. We had half expected the girl to wayky and plead with him or make some wild threat. Fleeker was on the point of projecting my image before a police officer on the next corner and having the girl apprehended for our relief Chandler was driven off without any more on her part.

Instead we were amazed to see her calmly cross the street and push the announcer button at the Chandler front door.

"I wish to see Mrs. Simmons, the housekeeper,"

she announced with quiet dignity when the butler appeared. "I am a friend of hers

A few minutes later a gray haired woman of about sixty appeared and regarded her caller with considerable perplexity.

They were in a small reception room off the main hall. The girl stepped past the housekeeper and to that good woman's obvious amazement, softly closed the door.

Then she turned back to the housekeeper and before the latter could protest, she raised a warning

"Don't give me away, Mrs. Simmons. Some one might overhear." With that she raised her veil.

The woman choked back an exclamation. Her face showed mingled affection and alarm.

"You? Here?" she whispered.

"I had to look inside once more. I watch for him sometimes. I saw him drive away just now. I couldn't resist one more peep. Can't you take me up to his study where he lives so much? If any of the family see me, say it's a young friend of yours you're taking up to your rooms and wanted to show around a little.

The girl's voice tremhled and there were tears in her eyes. If she was acting, it was an exceedingly clever hit of work

Fleckner chuckled dryly.

"Another dark chapter in the good Chandler's life. I certainly am surprised at Miss Stimson, however, The housekceper hesitated.

"It's a risk," she said, "but you know I'd do anything for you, Ruth."

The good woman was weeping quietly,

"That's the same dear old Mrs. Simmons!" the girl exclaimed, patting her on the shoulder.

Mrs. Simmons opened the door and peered out. There was no one in the hall. She motioned the girl to follow and they went cautiously out and up a rear elevator that led directly into Chandler's study on the top floor.

The girl sank in a chair and gazed raptly about her for some minutes. Finally she roused herself with an effort and glanced at her watch

"Oh, I promised to phone a friend at ten!" she exclaimed. "May I use this one?"

She indicated the booth containing the phone with the secret attachments through which we had so often watched Chandler issue orders to his followers.

"Why certainly, dearic," the housekeeper agreed. Miss Stimson entered the hooth, closed the sound-proof door and then, to our sudden illumination, twisted the ring that threw on the secret connection with the little dining-room at the Riccadona where Judge Tanner was just finishing his breakfast.

A moment later she was giving orders to the dehuded agent of the crime trust in the same husky half-whisper in which the real head of that disreputable hand was wont to issue his mandates.

# CHAPTER XIV

#### Miss Stimson Uses Direct Methods

THE sheer audacity of the girl took our breath away. What her former connection with the Chandler household had been I could not imagine, for the sinister suggestion made by Fleckner somehow did not ring true. My instincts rebelled against it. Then there was the evident respect of that manifestly conventional Mrs. Simmons

But another possibility flashed into my mind. Had this girl all along heen an agent of the crime trust spying upon us? Would that account for the episode of the treasure van? If so why had she not hetrayed us long before? On the other hand she was now evidently working against the organization. Had her devotion to Priestley, which I had been quietly noting, converted her to our side? I wondered if Professor Fleckner had thought of these startling possibilities and what action he might take,

But be all that as it might, her quick feminine mind had grasped a simple and direct plan of action and she had the courage to carry it out promptly. We gasped in admiration at her boldness and ingenuity as we listened to the orders she was giving to Judge Tanner over the secret telephone. "I've just got some important information about

our latest prisoner, young Priestley," she whispered. and from Judge Tanner's expression it was evident that he was entirely deceived by the disguised voice. "He is refusing to give information about the rest of his crowd because he expects to he rescued soon. They had advance information somehow as to where he was to be hidden and they have a number of our men spotted. We've got to make a quick shift and get him in the hands of an entirely new group that they're not yet wise to. My plan is to let him escape and pull the old crowd off his trail altogether. Then while he's free he'll go straight to his men. My new bunch of trailers will follow and we'll grab the whole gang. What do you think of that scheme?"

"An excellent one I" Tanner agreed, enthusiastic-

"That girl has a great head!" Fleckner exclaimed. "I never half appreciated her before. But I don't quite understand it. I don't think I can ever trust her again. She's too clever and women are flighty, variable creatures at best. And there's been some sort of tic between her and Chandler. That's evident."

Fleckner was too absorbed in present happenings to follow out his reasoning hut for me a sudden light was shed on her hysterical performance which had frightened Chandler away from the treasure van that night just as he was about to lead us to the main treasure. The girl, I was convinced, had acted with a purpose on that occasion. She had not wanted Chandler to guide us to the Treasures of Tantalus. Was it sentiment for Chandler that prompted her or had she an interest in the treasure itself? That was what bothered me. At any rate, she seemed now to be acting in our behalf,

But was she? That was another question that popped into my head a second later. Priestley, released from the trust, would he in her power. Was he safe there? Or was the girl a deserter from the trust and was now a member of a rival gang which, through her aid, had stolen the treasure van and was now cleverly using Professor Fleckner's great invention for its own ends?

That last fleeting suspicion seemed at that moment so fantastic that I instantly dismissed it and gave my undivided attention to the screen again.

"This is my plan," the girl was saying. "Follow closely and act quickly. There's no time to lose.

Get your present attendants on Priorkey out of the ways as far and fast and scretty ary argue can. Look out for tuillers. Have a new man bring than is a arriving there each of the strength and the on hand to brall him to his game. Right at the center dates the strength at noom. At year most will be one more than the strength at the strength at the center of the strength and the strength at the center of the strength and the strength at the strength and strength at the stren

Tarmer agreed without comment as was his custom on getting commands from Chandler. His careful repetition of the orders to his agreent in the underground club made it evident that he suspected nothing wrong.

But again from there on we lost the trail in the confusion of multiple messages all in code. This time, however, it was not important that we should trace the orders further.

For promptly at noon, we enjoyed the immense relief of seeing Miss Stimson's directions carried out to the letter.

Van Gordandt Park Esplanade, reven in those days, was througed with non-hoar strollers from the factories along its southern marchin, and a steady stream of motors filled its roadways. Miss Stimsnon could not have chosen a better place in which to carry our her scheme than this sout where any adjustly unusual occurrence would pass amonized in the throug, the locality with our the appointed time we swegt the locality with canade the could be any subject of set if we recognized a known trust agent, but we field to see any vanishing face or suspicious character.

It was exactly twelve o'clock when a cab, which had been circling slowly around the Esplanade, drew up and stopped for a moment in front of the Wright statue.

The door opened and Priestley stepped out, a pale and haggard Priestley, but with bearing undaunted. He stood for a moment in front of the statue and looked about him suspiciously. The cab drove rapidly away.

Just then he noticed Miss Stimson strolling toward the statue. She was dressed differently than in the morning, but was still veiled. Catching sight of Priestley, abe stepped up to him briskly.

"Good morning," she greeted him cheerily. "You are a little late." Then she added quickly in an undertone, "It's Miss Stimson. Don't look surprised. You're safe now hut we can't be too careful."

Priestley rose to the occasion and checked his momentary confusion with a laugh.

"I didn't see you coming and you startled me," he said. "I'm sorry I'm late. What can I do to atone?"

"You can buy me a nice luncheon at Briarcliff Inn. My car is right over here. I'm going to show you how fast a real lady can drive."

This debonair, easy-speaking young woman was still another Miss Stimson to us. I realized more than ever that the girl was a consummate actress.

She led the way across to the parking station and they entered a swift-looking little coupé. The girl backed the ear skilfully out of the line and it glided swiftly away northward.

Then, just as we swung the ray forward to follow the speeding coupé a cab flashed on the other side of the screen breaking all speed limits in defiance of the traffic officer at the southern entrance of the Esplanade.

<sup>a</sup>Better throw on another ray and investigate that cab," Professor Fleckner directed anxiously as he adjusted the ray he was controlling, so that we might keep a close-up of Miss Stimson's coupé on the screen.

I swung in a scoud ray and at J picked up the interior of the cit, my institutive fare was realized. It was the cab which had hrought Priestley to the Wright status guita now, still driven by the man who had released hint. This man's face was a picture of despuret fear. Beaide hint ast another man, registering both anger and alarm in his pagnacious commenace. They were bodh straining their cyses toward Miss Stimson's fleeing car into which they had evidently scen Priestley catter.

The situation was as evident as though it had been told in words. Miss Simon's haste had been justified. Somewhere along the line the crime trus's momeniarily delanded gang had discovered the trick played on them. The second man in the pursuing cab had evidently been sent in haste to undo the error and arrived near the scene in time to meet the man who had just released Priorite.

And for the moment it seemed that Miss Stimson's clever artifice had been wasted. All unconscious of pursuit, she was driving northward as fast as speed regulations permitted, but far- too slowly to keep ahead of the pursuing cab for more than a few minutes.

The crime trust's agent, in his desperation, burled speed regulations to the winds. Pedestrians fled in every direction. Vehicles shot toward the curbing to the right and left.

"Warn the girl! I'll get a traffic officer after the cab!" I shouted to Fleckner above the tunnil of the crowd and the snorting of motor-horns that filled our little room from our sounding screen as though we were actually on the edge of the throng.

Fleckner projected his voice into the coupé, warned the girl with a word, and in terror she threw here car into full speed and shot out of the Esphanade into a park road, with the swiftness of an airplane. At that she was harely holding her own against the swiftly pursuing eab.

In less than a minute, some quarter of a mile away, I located a motor-cycle traffic-officer, trundling his machine leisurely along, the speeders hidden from his sight by a clump of shrubbery.

To avoid creating public consternation by a seeming miracle I projected my image among the bushes and seemed to step out of them into the path of the officer.

"There's a speeder playing havoc with the crowd over there!" I shouted excitedly, pointing across the Esplanade.

Without a question he jumped on his cycle and was gone like a flash. Hopefully I drew my image back into the bushes and cut off the projector. If the officer should overhaul and arrest the driver of the cab, it would give our friends a chance after all.

Breathlessly Fleckner and I followed the triple race on our screen; the coupé slowly losing its lead over the recklessly driven cab, but-thank Heaven! -the motor-cycle estiming on it much more rariefly

They left Van Cortlandt Park behind and flew un

the Yonkers Boulevard. A few minutes later they were swinging perilously around the sharp curves of the Westchester Park drives.

Meantime Miss Stimson, behind the screen of her car top, had been ordering a lightning change act that seemed rather futile under the circumstances. Under her directions Prisetley had hauled a feminine outfit-cape, skirt, hat, well and gloves-from under the seat and put them on over his own clothing. Without too close inspection he looked like a largeframed middle-aged woman.

Miss Stimson turned the wheel over to him while she changed her own hat, well and jacket for an assortment of entirely different style. She looked fifteen years older and a dowdy contrast to the trim, stylish figure of a few minutes before.

She evidently hoped to get out of sight of her pursuers long enough to turn about and, in these disguises, give them the sip. Fleckner heartened her by telling her that the motor officer might give her that chance, though a dubious one at best.

Within five minutes that hope seemed about to be realized. The motor-cycle drew along side the cab and its rider signaled the driver to stop. Then our hopes were dashed again.

The second man in the cab turned back his cost lapel and, to our consternation, displayed the badge of a Central Office detective. He should something to the motor-cycle officer and the latter, instead of insisting on stopping the cab, let his cycle's speed out another notch and shot by in pursuit of the coupé.

By invoking the aid of the law we had merely made the capture of our friends doubly sure. The trust had played the same game. It was only a matter of minutes now when the motor-cycle would overtake them and Miss Stimson's printil little subterfuge would avail them nothing. The pursuers had long since noted the number and style of the car.

But just as I was in despair, the genius of Fleckner again came to the rescue.

"Let me handle your lever a minute, Blair," he exclaimed suddenly. "Get one of those spare lengths of power cable out of the storeroom."

"Now," he directed, when I had brought the small roll containing about a rod of half-inch wire cable, "hend one end so it will hook over that windowacht, then carry the other end across the room atteching it in front of the screen. TII turn on the in many: like a true onth have rearrended a pays the road in front of that motor-cycle and cab. That'll stop 'ern for a minute, TII guarantee."

The scheme worked. The motor-cycle and the cab flew around the bend and their drivers saw across the road a few rods altead, what appeared to be a heavy cable stretched taut at a height that meant a sure wrecking for both vehicles. Brakes screeched and they came to a dead stop within two yards of the apparent obstruction.

All three men swore roundly and stared stupidly at the cable. The speeding coupé in the meantime lengthened its lead by a quarter of a mile. "They've stopped," Fleckner told Miss Stimson,

"They've stopped," Fleckner told Miss Stimson, again projecting his voice into the coupé. "Better slip off on a by-path and trust to throwing them off the scent. They'll be on again in a moment."

"I'll do better than that," replied the girl calmly.

She brought the car to a grinding halt, reversed

and turned squarely around. She three over the lever boside the seat and the couple top folded down out of sight leaving the car looking like an ordinary open roadster. Thereupon she pulled out false number plates from under the seat, hooked them over the old ones and was back in the car in barely a minute.

At the same instant the motor-cycle officer, who by good chance had not yet attempted to touch the unsubstantial eable image, started to shove his machine under the obstruction to go on with the pursuit.

"Snatch it loose and pretend to run," Fleckner directed me.

I jerked the end of the cable off the window-catch and went through a pantonime of running. Professor Fleckner threw my projected image across the park green apparently dragging the cable after me.

"I'll get him! You two go on," shouted the pseudo detective leaping from the cab.

He raced after my image pouring a stream of automatic pistol bullets at it till Flockner ran it into a thicket and dissolved the thing. How long my supposed pursuer beat about that bush in search of a mirage I don't know, for I had more important matters on hand.

The fellow was barely out of the cab, when it leaped into full speed with the motor-cycle already gaining on it in an effort to make up for lost time.

And around the next hend they barely avoided collision with an open roadster containing apparently a pair of middle-aged ladies to whom they accorded hardly a glance as they swept by.

#### CHAPTER XV

### A Chamber of Horrors

An isome have; to core immense relief, ... w-edcounced Miss Simons and Privately, will in shelter of the hadrontzy. Imminished here noting their debade jurnears, they had turned off the cond over which huy had bent hereing and had had derity Square garage where Miss Stimon had rende Getty Square garage where Miss Stimon had rende the c-ra, a new interchangeable model that had adminishy mided here purposes. The false number like signit.

In returning the car, disguised as she was, she avoided the garage-man's suspicion by saying that she was bringing it back for her sister who had rented it.

In the meantime, as our following ray showed, the motor-cycle officer and the man in the cala ran on for over a mile before they became convinced that they had lost the scent. Then they turned back looking for ches, bat of course, in vain. Finally supposed Coursel officer man. There the motorcycle officer left them and so did we, for we saw no profit in following them further.

Priestley was too worn and exhausted with his experience to talk at first. Fleckner's man brought him some food which he ate in silence. Then he retired to the room he had been using and slept for twelve hours straight.

Meantime Fleckner, Miss Stimson and I took

turns at watching the screens and resting, but whistever action the cheir men of the crime trust had taken on Priestley's encape had been put through while we were distincted by the chase. We never fidd learn how Chandler found out so soon the trickhim and Tameri and the other hads on the screen, whatever excitement it had caused had subsided or been suppressed.

Nevertheless, we soon learned that appropriate action had been started.

When Priostley finally awoke, about six the next morning, I had also just finished my last map of the night. He followed me out into the laboratory where Fleckner sat in front of the screen, which at this hour in the morning aboved nothing but a scries of pictures of still life—a choice assortment of alsepting villains.

"Where is Miss Stimson? I want to thank her properly for rescuing me. I was too groggy last night," were almost his first words.

"I sent Miss Stimson home about an hour ago," said Fleckner. "She insisted on watching with us on and off all night and she was pretty well worn out to begin with. Too excited to sleep, I guess. I made her go home where she could get away from the atmosphere for a while."

"She's a remarkable young woman," Priestley declared. "Do you know, I've'paid so little attention to her that at this moment I hardly know what her face looks like. She wears that confounded eye shade all the time around here and has a veil on whenever she goes out."

"She's a good deal of a mystery," Fleekner admitted, "I don't suppose she explained to you what connection she had with the Chandler household in the past?"

"No, she told me only the barest details of how she fooled Judge Tanner. She said she knew Chandler's housekeeper when she was a little girl and that helped her in getting in. What do you mean?"

Fleckner related in detail what took place in Chandler's house when Miss Stimson entered it the morning before.

"Strange, isn't it?" was Priestley's only comment, but I saw he was deeply disturbed and that he resented Fleckner's innuendors.

"But come !" the professor demanded impatiently. "What about you? You have the story we're most anxious to hear. What happened when they grabbed you?"

Priestley shuddered. It was some minutes before he answered. When he did it was slowly, falteringly as a sufferer speaks between spasms of pain.

"It's an experience hard to talk about" he said at last. "What I have to tell won't help us much. It's merely an exposition of what the crime trust will do to a man when it gets him in its clutches."

He paused for a moment and then with visible effort continued:

"During all the time I was in their hands I saw no one, and talked to no one directly, except the man who let me go. I aw him for a moment or two only just before he left me and he was evidently so disgussed that I wouldn't recognize him again. They're exceedingly clever in their disguises. I'm che oren that when they make to work together in they are discussed even from each other. I haven't hey are discussed even from each other. I haven't the slightest idea where they kept me or how I got there and came away.

"To begin with, 'I believe Miss Stimmon has an eredy tody out has No. 72, the rama moned Genten, whom the trust condemned as a trailor is, or millor college and for a time I was engaged to this sister, but we hove the engagement by mutual agreement and later also margined Plant ITfords, and and er dose officer and has apparently been quite accessful Haw office and hands friend of my sites. So you see how done is the ise hetween us and how great a criminal but the was also as to be margined.

"It may be all right to view a prospective murder imperionally, especially when you feel that the world will be better off with the victim out of the way, but institutes revolved against allowing it to go on and as you remember, I protested. When I realized how helpless I was in the matter and bow much greater things were at stake, I gave in.

"But when I found the victim was to be john Genten, I had to do something. To think that he is one of the criminal defeatives! And the others we had discovered in the last two monthel. It is appalling I I makes one wonder whom he can trunt; the whole world acema crime mad under its smag cover of conventional respectability. It makes one distrust his wery self.

"At any rate I rushed out from here and did the utterly reckless thing of trying to call up and warn Gersten, you know.

"It came out of the phone booth and started down the street. It vaguely recall meeting a man, who passed me so closely that our elbows almost grazed. It was too procecupied to notice him at all. And that instant I had a sudden dizzy feeling and then verything went black. That's all I know about my kidnaping. Of course, the man who passed me must have sprayed an aneschetic in my face.

"When'T came to T was in total darkness and absolute silence. I might have been in an old-fashioned grave for all I could tell., In fact the close air added to that impression. I was lying on my back, on what seemed to be a slab of stone or concrete. I tried to move but found that my hands and feet were shackled.

"About my bead was fastened some sort of contraption that seemed to consist mainly of pads over my cars and mouth, which I thought was to keep me from hearing sounds or calling for help, but I was quickly undeceived.

"Following the instinct to call for help, I tried to cry out and, to my surprise, succeeded amazingly. I emitted a thunderous sound, which seemed to be concentrated in my own ears. It nearly burst my ear drums.

"At that I heard a low chuckle. I stiffened and wrenched at my shackles, but was unable to break free.

""So you are awake, are you, Priestley?" some one said in a low casual tone, that came apparently from right beside me. I strained my eyes to see him but couldn't make out the slightest outline in the dense blackness.

" 'No use yelling your bead off or straining yourself trying to break away,' the voice warned; 'that outfit on your head is a telephone receiver and transmitter so that you can hear what we have to say and tell us what we want to know. That's your only connection with the outside world, excepting a tube through which we'll feed you a little air if you want to use it to talk with and talk right.'

"'Where am I?' I demanded.

"Again came the taunting chuckle, but somewhat louder.

"I can't give you the street and number, very well. It isn't allowed, but, if it'll be any consolation to you, I can tell you that you're in a strong aluntinoid coffin buried under ten feet of carth in an unused subcellar. I'm the cony one in the world who knows where you are, and I own the building, so you can see what a lively chance of rescue you have."

"For once in my life I nearly fainted away with horror. I believed instinctively that he was telling the truth, though I never got further proof of it than his bare statement and my ewn impression of my surroundings.

"" 'Now, whenever you are ready to tell us who are the rest of your friends who think they know some of our secrets, I will listen and if what you tell me is true, your situation will be made easier for you,' went on the voice.

"Just what I said in reply doesn't matter. I gave him to understand he had better kill me at once and save his time as I wasn't the kind of yellow dog who would find life tolerable after be had hetrayed his friends. That wasn't, as a matter of fact, as heroic as it sounds, for I knew how hadly they wanted to know the names of their enemies. They could gain nothing by killing me, for as long as they kept me a prisoner I could do them no harm. On the other hand if they did kill me, they'd lose their only present chance of learning the names of those who were endangering their whole organization. If I gave them the information, they'd have no further use for me and would doubtless promptly kill me. I knew they would try to keep me alive in the hope of finally breaking down my resistance. Every moment gained was giving you people so much more chance of rescuing me. I didn't realize the chances against the rescue or the torture I would go through meantime or I think I would have wished to die right then."

Priestley paused and shuddered again at the recollection of it.

"Did either of you ever happen to use that instrument of misery the old-fashioned wired telephone, whose connections were made by hand at switchboards-one of those complicated contrivances, generally out of order and at best working in most haphazard fashion, from which our fathers suffered a century ago? You may remember them as a boy, Professor Fleckner. Blair may have seen one in a museum. Well, when I was a youngster, about fifteen. I ran across a short line of that sort while traveling with my father in a back-woods section of northern Alaska. I remember well the mixture of buzz, clack and rattle that nearly split my ear-drums while the so-called 'Central' was trying, quite often in vain, to 'get a number,' with an especially violent attack preceding her frequent announcement that 'the line is husy.

"Well, the telephone instrument that was attached to my head had the same set of tricks. Whether it was really an old-fashioned early-twentieth-century affair, I don't know. Yose have read of the ancient practice of totruing prisoners by a steady drep, drip of water on the sharen shall, er of the annihie are by continuous light may on the bools of his feet. I an sure I would have welcomed those methods—any or all of them—in perference to that infermal crackling in my cars that key top hour after hour, broken if I was ready to talk.

"Finally I seemed to lose all sense of hearing as such. Each click of the instrument was marked by a sharp pain that seemed to shoot through my skull and down every nerve in my body to my very toes. I tottered on the verge of definium, but fought against it with all my remaining will.

"At last I must have lapsed into momentary unconsciounness. I cannot be again with a name on my lips. I knew, that in my hald-consciousness. I had spoken aloud the name of seme acquaintance, but whose I did not know, nor do I know now. And I am half craxy with the fear that I may in that instant have herayed one of yoa."

He stopped again and rubbed his head slowly like a man still in a daze, his face a picture of utter misery. Fleckner and I looked at each other, and each read in the other's face an uneasy echo of Priestley's fear.

#### CHAPTER XVI

#### The Crime Trust Invokes the Law

THE rest of Priestley's story made little impression on me. I was too absorbed in speculation as to what he might have said in that moment of half-delirium. Had we been betrayed, and could we expect at any moment some insidious attack by the gang?

I gathered, hall hearing, that when Priestey came to with the unreception anno on his ling, the citizing of the telephone instrument had ceased. It must have been at about that moment that word came to the watcher above his prione-grave to release him, for he became conscions of a sweetish, suffording vapor, releasely an association is seen down through scionanes completely this line, and did not recover it again until he had been carried in the cab almost to the point where he was let go.

His story completed, he int back exhausted and listened apathetically to Fleckner and myself discussing our next steps. The possibility that one or more of our names, in addition to Priestley's, was in the possession of the crime trust was the most serious thing to consider.

We were keeping the crime trust principals on the seren as usual, but recent events had made them more than ever cautions, and we gleaxed nothing of values as to their information and phase. Our chief dread was that: Priestky had it slip the name of Professor Piecker. In that case we could expect an attack on the haloratory at any moment. What indicious form it would take we could not imagine, and hence could not prepare very intelligently to meet it.

One thing was certain. If Fleckner had been betrayed and the secret of the telephonoscope discovered by the trust, our game was up.

#### 770

"At the least," I said, "we must all stay hidden here at the laboratory. Priestley certainly can't show his face in public until we've got this kunch nipped. I advise keeping even your servants shut in on some pretext or other."

"Right!" Fleckner agreed; "and we must use extreme caution in answering both the door and telephones. I'll have Miss Stimson stand guard over those matters."

"But Miss Stimson is out!" Priestley cried in sudden alarm. "We must get her back at once. They may have her name and be after her now."

He sprang for the telephone, unmindful of his physical weakness.

Fleckner made a move as if to stop him, hut immediately seemed to think better of it.

"Don't say who's calling," he warned Priestley instead. "I instructed her when I hired her to keep her employment absolutely secret."

Miss Stimson lived alone at an apartment hotel. In a moment Priestley had the desk clerk there on the phone and asked for her.

After listening to the clerk's report he hung up and turned hack to us, his face even paler than hefore.

"They say she isn't there, and hasn't heen in her room for several days."

"Then they've got her !" I exclaimed.

Priestley sank into a chair and dropped his face in his hands, too overcome to speak.

Professor Fleckner was lost in thought, hut said nothing, and his masklike countenance betrayed no emotion.

"The poor girl!" I exclaimed. "They'll torture her horribly! There must be some way of rescuing her!"

"I'll give myself up in exchange," Priestley declared. "Let me at the instrument."

He went to the switchhoard of the telephonoscope and threw over the control lever. Professor Fleckner watched him with a sardonic smile,

But to our hewilderment nothing happened in response to Priestley's manipulation of the levers. The screen remained hlank.

Fleckner chuckled.

"It won't work, will it?" he taunted. "You see, I have noted that you boys didn't quite approve of my methods and might get rehelious. So while you slept, I changed the combination of the instrument so that no one but me can work it hereafter.

"Furthermore, I had this spatternari built over some years ago when I bagen making score towertions. I defat't propose to have my ideas stoke, The doers and windows have score electric locks, steel bars that thrust across them out of the interior of the adjacent walls, so that it's as impossible to go tout as in. Twe just presed a secret hutton that puts have locks in operation. I've had presed another another summoning jumes and his she assistant another summoning jumes and his she assistant

Into the laboratory came James, the gigantic exathlete whom Flecknet employed as butler and valet. With him was another man equally competent-looking, from a physical standpoint.

"James," said his employer, "some gentlemen on the outside are trying to get at our secrets or kidnap us or hoth. I've told you a little about it already. I've thrown all the ontside locks and cut off the phone. You may break the news to the cock, He will get his regular food supplies up the delivery table, as susual and send back a written overfor for each day, so we work starre. These two young getallemen are findeds of mine, that don't quite agree with me just now. Keep them under guard, especially while they are in the laboratory. They'll have access to this and their two bedrooms only. You take the day watch and John the night watch."

Then he turned to us.

"I think I understand some things a little hetter than you boys," he said. "I think I can guarantee that Miss Stimson will suffer no serious harm before I rescue her. I also think I can control the crime trust pretty well from now on, and I don't propose to have any misguided interference."

Pricstley threw up his hands and gave in without further words, and I followed his example.

At that moment the newspaper delivery tube clicked and dropped the morning papers on the table back of us. We each picked up one and sat down to read, not expecting much of interest in the news that found its way into print. It served rather as a welcome distraction from the tension.

But on this particular morning, we found that, instead of furnishing distraction, the news bore vitally on our troubles. At last the crime trust's activities had broken into public print.

Not that the startling tales on the front pages would reveal to the uninitiated the hand/work of that evil coterie. Even I result for some distance into the first item that caught my eye hefore I suspected it. The heavy three-column head ran:

#### TWELVE RICH MEN VANISH; VICTIMS OF KIDNAPING PLOT.

In the last trenty-four hours, it seemed, reports and come to police headquarters, one after the other, of the mysterious disappearance of a dozen of the best known husiness, men or hankers in the city. Ten of them had responded to mysterious telephone calls at their direce, hurrying out without any excalls at their direce, hurrying out without any exhour or so. None of them had heen seen or heard of since.

The remaining two, is office associates testified, had received calls of a mysterious nature to which they had refused to respond. One of them was driving home from the thester that night when his car was stopped by a pair of masked men in a quite spot. He had heen dragged out of his car and carried off hefore his frightened family, who were with him, nealized what was happening.

The other had been called to his door just before retiring, by a thick-set, hearded man, as the huller described him, who retured to come in. When the master failed to return after some time, the hutler went to the door to find him gone. He had not been heard of since.

I read the list of the victims over twice before its significance dawned on me. I had copied the list of names on my memorandum pad in this very room leas than a year ago. It was a complete catalogue of the men Fleckner had invited to witness the first exhibition of the telephonoscope on that memorahle New Year's Eve. "Why," 5 exclaimed, "this is the crime trust's work! They've caught every man, excepting ourselves, who knows anything at all of the existence of the telephonoscope."

"Huh?" grunted Fleckner. "Oh, you are reading the other story. I was reading the one on the righthand side of the page."

The old man had turned deadly pale. I saw him visibly frightened for the first time.

Then, before I could turn to the account that had caused this remark, I heard a groan from Priestley. He, too, was staring at head-lines opposite the ones that had just bowled me over. I noted them now for the first time, and my own feelings were hardly less acute than that of my companions.

This is what caught my eye:

#### THOMAS PRIESTLEY, MULTIMILLIONAIRE, FLEES JUSTICE AFTER INDICTMENT

#### Accused of obtaining huge fortune by fraud, he escapes officers after thrilling auto race through city parks

The crime trust, defeated in its purpose to hold Priestley an illegal prisoner, had laid a clever plot and invoked the aid of the law against him,

# CHAPTER XVII

#### Fleckner Usurps the Crime Throne

 $\label{eq:response} \begin{array}{c} \mathbf{P}(\mathbf{R}) = \mathbf{P}(\mathbf{R}) + \mathbf{P}$

The grand jury being in session, an Inderment had been jammed through immediately and an order for arrest obtained. Priesiley, not being found in several doys, a gueral alarm had been sent out for him. A detective had seen him that noon getting into him. A distribute had seen him that noon getting into several doys, a gueral alarm had been sent out for him. A distribute had seen him that noon getting into him the distribute had seen him the seminous they and given chase.

Then a strange thing had happened, proof of a carefully worked out conspiracy. The story went on to tell how the detectives had been foiled by a heavy cable stretched across the road.

It was a plausible tale and sensational in the exterme. It not only ruined Priselty's reputation, both by direct statements and countless cleverly put and evidently inspired innuendoes, but from a legal standnoint seemed to present a pretty clear case against ium, that could be consteated only by exposing the secret of the telephonoscope, which in the present circumstances would do more harm than good.

Further than that, the only persons who could testify as to the genuincness of the signature of Priestley's cousin, barring Fleckner, Priestley, and myself, had been kidnaped, so that nothing of that sort would interfere with the trust's plans. I pointed this out to Fleckner.

"And in addition to that," I went on, "if they knew enough about us to capture all the men who are in the secret, they certainly know your connection with it and will be after us at once. I only wonder they haven't been here already."

"Quite so," Fleckmer agreed. "Their delay is probably caused by the necessity for keeping such moves secret. Well, we'll prove an allbi as far as this place is concerned."

"James" he directed, "tell the cook to order encough food shape's sent up this morning to last about a month, fogether with the canned and concentrated augulases we have on band. Then you bring a couple of trunks and a bag out here, and you and John and the cook put on your own things and get your values. Then call up and have a hig motor back down at the door in half an hour. Tell them we want to catch the ten thirty at the Pennsylvania Station."

Priestley looked up in amazed alarm,

"You're not going to attempt to leave," he exclaimed, "and keep me locked up here alone?" "Keep your seat, Thomas," Fleckner reassured

"Keep your seat, Thomas," Fleckner reassured bin. "I'm going to do, nothing of the sort. The management of the building and the erime trust sleutls are simply going to think they see us departing. Oh, by the way, James—also call up the superintendent and tell him we're going away for a month or so, taking a trip down through the Andes or any other remote place that sounds good to you."

A half-boar later Fleckner turned on the telephonoscopes and got the force entrance of the building on the sereen. The motor hack he had ordered stood withing. Pleckner's two met brought, one of the motions of walking while the professor turned on the projector and sent their images out into the hall down the elevator and out to the hack. He held the image of the trunk in the hack, while, with another risk, be brought the images of the new back up other trunk.

Then all four of us carrying bags were projected in image down aboard the hack. Fleckner told the chauffur to draw down the curtains and drive to the Pennsylvania Station. The professor kept our images and those of the trunks and bags aboard the hack all the way to the station.

"This is on my account at the livery," be said to the driver on the hack's arrival at the station. He could not, of course, satisfy the man with shadow money. "By the way, while I'm having the baggage

#### 772

# TREASURES OF TANTALUS

taken in, would you mind telephoning for me? I've just time to catch the train. Call up the superimtendent of my building and tell him that my attorney. Mr. Forsyth, will attend to my rent while I'm gone. I forget to tell bim. Add a dollar for yourself to my bill."

This, of course, was mere by-play to get the driver away long enough to dissolve our images without causing him undue astonishment.

All this time Fleckner had kept another ray playing about, watching for trailers of the hack, but if the trust had any emissaries watching our supposed movements we failed to catch them at it.

"Well," Flockner said at last, "it looks as if we were all sung and could defy the trust indefinitely. If they try breaking in here illegally, they'll get an unpleasant surprise. If they try invoking the law through a permit to secure evidence, I have another sort of surprise.

"As for your case, Priestley, don't worry about it. I will arrange to have no further action taken on it until you are caught, which will be never unless I see fit. When we're good and rendy, provided you make me no more trouble, we'll clear your name in such spectacular fashion that there'll be no doubt left in the public mind."

"Do you mind telling us how you expect to accomplish all these marvels?" Priestley asked rather sarcastically.

"You'll see, little by little," the professor replied imperturbably. "From now on I am the real head of the crime trust, I'm going to rule with a lighting rod. I'm going to stand it on its head. And all not without profit to myself. For the Treasure of Tantalus its mine to have and to hold."

Priosiley and I remained silent. We had kerned by now the unwisdom of arguing with him. There was a wild, almost mad, gleawn in the old man's eyes. I wondered if the vision of too much power had unbalanced his reason. Or had we, in our desire to root the hidden criminals from society, put ourselves in the hands of a master criminal?

Priostey and I often discussed these questions cautiously between ourselves during the coming weeks when we were alone together in one of our rooms and were sure the old man was preoccupied with his screen.

And as the days went, evidence piled up that this old genius who had so enthusiatically started on the hum. for high-grade defectives, had humself devoloped a defective streak. I began to wonder more than ever who of us was immune from this obscure mental malay. There were times when I found myself gaplying tests to myself to see if I was morally normal.

All thus day, after Fleckner had put his house in order for a possible size, he as thy his dask in deep thought, now and then making notes on a pad. During that time he made no use at all of the telephonoscope. He was evidently, as we came to karn ambituous table for power that the word has meet known, a campaign that had for its aim the such school of the strength of the strength of the strength relation of society, holding its privacy for ransom.

At six o'clock that evening he sprang suddenly into action. He retired to his bedroom for a moment, and when he returned, we were annazed to see him attired in a black robe and mask like those worn in the crime trast's secret clubroom. "I'm going to pay some of my new subjects a visit," he remarked casually as he sat down at the telephonoscope switchboard.

He then switched on the ray by a new and complicated combination device of which we could make nothing, though we watched closely. At once the private dining-room at the Riccadona was on the screen. Then we sat and waited.

A half-hour later Judge Tanner, Dorgan and Winter entered. They removed their overcoats and sat down. They had just turned to their menu cards when Professor Fleckner arose, turned on his projector, and chapted his hands.

The trio of rascals at the little table miles away leaped to their feet in startled amazement just as the heavy draperies of one of the windows seemed to melt silently into the frames and a black-robed, masked figure stepped off the sill and stood before them.

"Pray, sit down, gentlemen. Don't be alarmed," he commanded in a good imitation of the hoarse whisper Tanner had heard so many times over the secret telephone circuit.

The three obeyed, pale and shaken.

"I am the Man Higher Up, before you in person at last," announced the appartition solernity, "I never expected to give you a personal interview here. You remember I aid to you, Judge Tanner, on election night, that I would like very much to thank you in person, but that it was not possible. You and Mr. Dorgan made it clear when you initiated Mr. Winter here that it wan't done."

The three winced at hearing their names pronounced in this offhand manner. They had evidently believed that the Man Higher Up was as ignorant of their identity as they were of bis.

Priestley and I, standing behind the black-robed figure of the real Fleckner and peering over at his projectied image on the screen, hardly dared breathe lest the alightest sound from us be likewise projected into the tense atmosphere of the little dimig-room, milea away, and mar the illusion the professor was creating.

"But new conditions have arisen," the black-robed image went on, while his bearen; heir first terror subsiding, stared at the blank mask in hypotized facination. "Somewhere in this carefully worked out organization, a leak has sprung. It has proven to mysterious and buffling that I dared not use our somewhere the start of the start of the second of my concentration are been as a conference. So I am britter the widden

of my conceiling my personality. "In the first place, Judge Tanner, don't use this secret telephone circuit again. I'm afraid it's unside. Recent events make me think some of our telephone communications have been tapped. When I need to confer withy out I'l call you on the regular telephone at your home or your chambers and simply asit: 'Has there been a decision in that last case yet?' You will simply answer that there has not and hang up.

"Then you will come immediately to this room. I'll be here. When you have orders to transmit to your belpers below, I'll see that they get there. I'm explaining to them also that they must not use the phones for organization business till this mystery has been cleared up."

Priestley and I looked at each other, unwilling admiration in our faces. At one clever stroke Fleekner had cut Chandler off from all communication with the crime trust of which he had been the head.

"Now," the apparition went on, "I've decided on a different course toward the prisoners we are holding. We'll have no executions and no more tortures. We'll keep them comfortable. Make each one think some one dse has confessed and promise bin immunity if he'll corroborate the confession."

"Prisoners?" Tanner asked, finding his voice for the first time. "We have only one prisoner—Gersten --and I was about to report to you to-night that we've proved him innocent and ask your permission to release him."

"ANP" Recharge exchanged, "I'm glob to hear it, Recharse him, hyst all means. By princence I necut also Printely, I forgot for a moment I had not yet tody you my special corps has just recapitured him. So we are safe from him personally, hat he has friends we must each. By the way, Vinter, let that indictment lie kille until I give the word, I may decide to have it quanked. Have you learned anything new as to the methods by which our secrets are leaking out or how Printely ecapode?"

"Not a thing," Tanner admitted. "We are still absolutely in the dark."

"Didn't Priestley make any remark under torture that could give you a clue?" pursued the pseudo crime trust chief.

Tanner looked distinctly uncomfortable, and hesitated.

"I trust you are not trying to conceal anything," Fleckner went on sharply,

"I won't conceal anything," Tanner admitted, "but first may I beg immunity from the usual punishment for having obtained forbidden knowledge? I can't believe anyhow, that what Priestley said was true,"

Priostle's clutched my arm convulsively. We were about to fearn what my friend had revealed in his delirium, that half-rememBered shouting of a name which haunted him ever since with the fear that he had betrayed one of us,

"Have no fear," Fleckner consoled Tanner, "This is an unusual occasion. We must grasp at any straw of information we can get. I'll see that all precedent is waived in this case."

"Well, then," Tanner faltered, "the young man abauttod once, just as he was coming out of a semidelirious stupon brought on by his suffering. The attendant heard him clearly, so there's no mistake. Mortimer Chandler, President-elect of the United States, is the real head of the crime trust,' is what he said."

#### CHAPTER XVIII

# Chandler Springs a Surprise

**PROVESSOR FLECKNER** started visibly at this amounter that Privatey, in his delution, had revealed that Privatey in the deturn the carefully guarded mane of their nyustrices chief. Priestly and I, as well as the three uneasy figures around the table in the little dising-room, waited breathlessly for his reply. He was not quick to make it. For some moments

He was not quick to make it. For some moments he stood in silence, evidently debating how he should meet this unexpected situation. At length he spoke solemnity, deliberately. "It has been our policy neither to affirm nor to deny guesses as to the identity of any of our members, but to punish swiftly those who venture to guess. This case is different. I feel that I should set you right.

"I am transled to know that young Direkty has loared a much as to genes rightly at the existence of our server organization, and that we see initized that we not an existence of the second second second have put up for Provident of the United States. For their at the out of the even reading up through the initial second second second second second second problem that the second second second second phonor may pleased to call a "Direction" change the phonor may pleased to call a "Direction" changed to phonor may pleased to call a "Direction" changed to and The applies machine meeting good."

His image backed to the window. Again the drapcries seemed to melt and he vanished. He threw off the projector, snatched off his black mask, and turned to us, wiping beads of sweat from his face.

"Well," he remarked with great satisfaction, "Twe splited Chandler's guns and found out what I wanted to know. The gentlemen of the crime trust haven't learned a thing about the telephonoscope, and never will, for every one who knows anything about it is safely out of their reach."

"But," Priestley protested in bewilderment, "what about Miss Stimson and the twelve men who were present at the demonstration on New Year's Eve? I thought we were satisfied they were in the power of the trust? Have they excaped?"

"You mean you were astisted," Fleckner chuckled. "I might as well tell you about that now. They have not escaped. They were never kidnaped by the trust, for the simple reason that I took good care that they shouldn't be by kidnaping them first myself." "What it's exclaimed. "Do you mean to say that

"What?" I exclaimed. "Do you mean to say that all this time you have known where Miss Stimson was?"

"Exactly," he agreed. "Miss Stimmen never icht ich holding than right I auf I enter ich noor while you and Pitestery iegt ner has alle nine. She is ordened. You see, I rent for ar aljoning apartnerist in this honse. The twelve missing genetieness ner also. The of them came management of the papers apple; the other two allicit, so they liad to be carried here by my two men, finance and John incidents which the papers also told about Infidiv.

The feelings of Priestley and myself were too mixed to allow us to speak. We stared at the professor in amazed silence. Then another suggestion intruded itself in my mind.

"And the disappearance of the two-million-dollar treasure van after Chandler was scared off? Was that also engineered by you?" I asked.

"Exactly," he agreed, "When we were watching Chardler on his way to meet the treasure van, I had John and James—who, by the way, are expert aeronatus—in a swift plane of mine in my hangar on the root of this building, ready to fly to the spot the moment Chardler revealed to us the hiding-place of the main treasure. When I say there was no hope that Chardler or saw agent of his would dare try to go back to the van after he was frightened by Miss Stinson, I decided. I wouldn't let an unclaimed treasure, even a paltry two million dollars, lie around idle, So after you and Priesitey were aaleep. I directed the boys to fly out and retrieve the van and take it to a good hiding-place of my own, where it now lies aste."

This locasting confession, too, Priestley and I received in silence. I remember wondering at this in Priestley's case, such a sharp contrast to his usual vehement protests against Fleckner's doubtful meinods, which now had passed quite beyond the doubtful stage. I was disturbed, too, by my own aquiescence.

Î no longer had any doubts that Fleckner had passed into the ranks of pronounced criminal defectives. What disturbed me almost as much was the fear that Priestley and myself were to some degree infected with the germs of the same defectiveness.

Professor Pleckner was now hay with further phas. After consulting his notes and spending a lew minutes in thought, he turned again to the telephonoscope cortrol board and howing the home of Mortimer Chandler on the screen. Chandler was shown alone in his study hand a work over some reports. A hasty search about the boase with the rays made it apparent that the family and his scertary were out for the evening. The screauts were in their own quarters is a distant part of the hous.

"A very opportune moment for visiting my predecessor on the crime trust throne and letting him know he is out of office," chuckled the professor. "Also, I nay add, this is the evening in which I take over officially, the custody of the Treasures of Tantaius,"

He slipped on his black mask again, got a heavy automatic pistol from the storeroom, which he held conspicuously before him, stepped in front of the screen, and threw on the projector.

CHANDLER, bent over the papers at his desk, face to face with the black-robed, masked image that had so startled the council of three a little while before.

The President-elect leaped to his feet, his face showing amazement and anger, rather than fright, "Who the devil are you, and how did you get in?"

"Quiet! Stand where you are I Don't press any call-buttons! If any one finds us together you'll die first, he next!" Fleekner rapped out. "Sit down over in that chair, out of reach of push-buttons."

Chandler obeyed, as any reasonable man would. But he still showed no sign of fear. He already had himself in hand and was eyeing the apparent intruder cooly.

"That's better," the apparition went on. "Don't be alarmed. You won't suffer the slightest harm if you are reasonable, as you will be, i'm sure, when I've shown you that your life and reputation are entirely in my hands.

"Now, as to your questions. To answer the second one first; I got in by a method I shall use often from now on, for it will be necessary for us to confer frequently.

"And who am I? Well, we don't name names, as a rule, in our organization, do we? I'll just keep mine to myself, as you have kept yours till now. I am, however, a member of the secret organization of which you have been the head, a member who was not afraid to use his brains and inquire into things, instead of blindly taking orders.

"I have located yea, for instance, and can expose you at will if choose. I know the machinery of the organization from A to Z. I have in my posession a complete list of the members and records of every order you have issued for a year back, yestien which nearly workeds (i, I have found the leak, stopped it, and altered the system so that you can no longer handle it and I can.

"In short, I am the new head of the organization and have come here, tonight to atmounce my assumption of leadership and offer to retain you as my first lieutenant, provided you are amenable to reason."

My admiration for the poise of Chandler increased as I watched him while Fechner pronounced this remarkable mixture of truth and fiction. There was not the slightest flicker of expression in his face as he replied.

"This is very interesting" he said, with meering emphasis. "Some scorer fraction" of a space and this is the rather original and startling method of intalling a new officer. I fancy you had a little too much to drink and got in the wrong house. Otherwise, I haven't the remotest notion of what you are talking about. Now, just go out quictly the way you came, and well overhood; it this time."

Feckner's answer was to draw a packet of photographic prints from a packet of his robe. His counterfeit image scemed to lay them on Chandler's table, at the same time keeping the automatic ready with the other hand. He picked up the prints one by one and beld them before Chandler's face.

There was a photograph of Chandler in his telephone booth followed by a close-up of the mechanism of the secret circuit and a picture of the council of three in the private room at the Riccadona, Judge Tanmer at the phone taking Chandler's orders. Several views of the underround clubrosed

There were photos of the robbing of the trust company, showing Chandler's part in it from start to finish. There were views of the counterfelting plant under the option mill at Fall River, and others showing how the bogus money reached Chandler.

It was a pretty complete and unanswerahle argument. Chandler's eyes widened a little as he watched the pictured story unfold. But otherwise he showed no signs of emotion.

"Now," Fleckner announced as he slipped the prints back in his pocket, "in addition to this I have phonograph records of the conversation that went with these photographs, so there isn't much evidence lacking. I have other photos, too, if you aren't satisfied yet.

"I routs be brief and get away before I am interrupted," he work on, when Chaudier made no sign, "In a nutskell, the situation is this: I have learned the system by which you held your power. That alone ends your usiefulness as held of the organisation. Further, exterial nonisiders hegun to get a close to your system of communication with subordinates, useless. J've therefore been atomic and established a new system, which I know and you door. Five explained to the leaders that the door is unafa and that they must acknowledge no more orders over So you are entirely cut off and helpless,

it. So you are enurry can be my own secret inner "Still further, I have built up my own secret inner circle of assistants within the organization and broken up yours, as you will learn if you try to give any more orders.

Now, not a man but you and me know that the headship of the organization has changed. And they won't know. You will be surprised to learn, though, that one of your recent prisoners knew you by name for the head of the organization, and under torture told it."

For the first time Chandler showed signs of alarm.

"I thought that would startle you," Fleekner laughed. "Well, don't worry as long as you obey me. I have assured them the prisoner was crazy and altogether in error. Meantime I have put the fellow where he will do no harm unless I choose. But mark me. If you are rebellious, I have only to expose you and the old machinery you controlled, and go right on with the new one I have created. Will you act as assistant and obedient adviser to me, or face disgrace and residence at Ossining Farm?"

Chandler stood in thought for some moments. He was now controlling his emotions with evident effort

"You have me," he admitted at last. "I vield, There's nothing else to do. What do you wish first?"

"There's only one thing to-night," said Fleckner, triumph in his voice. "And that is to complete the transfer of authority by turning over the custody of the secret treasure."

Chandler was studying him curiously as he said this. His own face had become a complete mask again.

"I noticed that you had no photo of the big treasure chest. I suspect that you, with all your knowledge, know no more about the treasure's hidingplace than I." "What do you mean?" Fleckner demanded

sharply,

"I mean that you've made the natural mistake of assuming that I was the ultimate man higher up. I was not. I was head of the working organization, it is true. But above me was the only man who knows the secret of the treasury. I haven't the remotest idea who he is or where he keeps the treasure."

#### CHAPTER XIX

#### A Reign of Terror

Astrophic announcement that his overthrower had not yet reached his goal. Chandler and Fleckner's image faced each other in intense defiant silence

It was a poker game with wealth and power immeasurable at stake, the spectacle of a Napoleon wagering with the devil his soul against the dominion of hell. But I defy any mortal man to have read in the mask of stone that was Chandler's face, whether he was risking his last vestige of power and self-respect on a royal flush or a pure bluff.

Fleckner, uncertain, wavered and lost

"Very well," he said at length. "I'll let your

statement go as it stands for the present. If it is true, you and I are equal now as far as the treasure goes. In the end I will conquer its secret and deal with its guardian as I have with you. At least he will receive no further tribute from the crime trust and wield no more power over that organization. If you have lied I will soon know it, and I will handle you without mercy."

He paused impressively.

"Do you wish to alter your statement in any way?" he added.

"Not in the least," Chandler responded colorlessly. "I have told you the truth. Make the most of it

"Very well, then," Fleckner said finally, "We'll meet again soon. Good night."

Chandler made no reply. He stood silently watching the black mirage of Fleckner until it passed from his sight through the door into the hall and there vanished into the air. He made no attempt to follow it or to investigate how this supposedly material being had gained entrance.

Instead he sank into his chair, and for an hour sat, bowed head in his hands, his iron self-control abandoned once he believed himself without an audience. Finally he arose and staggered into his bedchamber, a man suddenly stricken with are.

Meantime Professor Fleckner was raging about the laboratory like a caged lion robbed of his meal.

He seemed oblivious to our presence. "Was the man lying? How can I prove it? Treasure of Tantalus indeed! Slipped away again! But I'll get it yet! Meantime they'll pay through the nose!" he muttered as he paced the floor.

I believe this final disappointment and his baffled rage was the ultimate blow that broke down the last inhibitions of his gradually warping moral nature. Even his normally powerful intellect spemed for a time unbalanced.

At any rate, Priestley and I were doomed to sit helplessly by and witness, at its evil source, the development and spread of a world-wide reign of terror -a period when no man felt safe against the public revelation of his most private words and acts or the contents of his most secret documents-when most carefully guarded money and securities were stolen, the thief betraying uncanny knowledge of the secret measures of protection. Family skeletons were rattled in the ears of wealth till large sums were despatched to mysterious sources to buy silence. Secret business pacts were laid have, sending the stock market rocketing skyward or plunging to the depths. Political intrigues were unfolded for the benefit of rival parties. And all these infernal ac-tivities, Priestley and I knew, emanated from the mind of Professor Fleckner through the controlhoard of his miraculous telephonoscope.

In the mean time this evil wonder-worker was reported as being seen and interviewed in various sections of South America, through which continent he was believed to be making an airplane tour. The crafty professor thus maintained an alibi by projecting his image to one of those points every few dawe

He no longer took us into his confidence. He made no objection to our watching his screen when we wished, but some of his most spectacular coups were performed while we slept. We followed them mainly through the sensational newspaper stories that appeared each morning. For the papers were delivered through the tube regularly. Fleckner had taken care not to order these stopped when he made his pretense of closing his apartment and going abroad.

He must have worked the larceny squad of the crime trust overtime and have taken no pains to conceal the robberies by replacing the stoicn money with counterfeit, as in the case of the theft we had witnessed in the trust company vaults. Hardly a morning passed in which the papers did not feature a series of widely scattered bank haults

A rivil investor of Fickner's, Dr. Hayward Bernstorn, was mannificating a support of guilty of restruction, was mannificating a support of the to the patent office. Only the investor knew the twill part of the inperforms, administering the final needed. The one hand to each high of the opposite value in one of New York's most unshandal labels. Yet, suddayly, another deminist concern, the opposite value in one of New York's most unshandal labels. Yet, suddayly, another deminist concern, the oscillation of the opposite of the sector sudd be amon process. The overse of the sector sudd be shaded performs of the sector sudd be the one an unsubstructure operior.

But the secret formula was found intact and apparently undisturbed, and there was no valid evidence that any one but its owner had seen it. The suit was lost.

A man, prominent in New York social and financial circles, made a scurrilou and, as it turned out, mintaken statement about a lassiness rival. It was made only to the mader's wife in strictent confidence between the strictly of the strictly of the in court that an unknown stranger had stepped up to 'him on the street and quoted the shanderous remark. Even the wife of the defendant, apparent by relationship, though weeping and relaciant, apparent by handle the shanders.

She explained that she did so because she had received an anonymous letter threatening that if she refused, an unfortunate, but supposedly secret, incident in her own recent career would be exposed. No evidence, as to who this mysterious blackmaller as her disable over thes, but reflectioner reminded us, as her disabled over the fuel fields of the professor's defendant in the shandler shift had once disguided in the papers a public statement of the professor's.

In similar fashion Fleekner vented his personal spheen in many directions. In other instances he settned to have no personal interest other than the gratification of his whimsical humor or a display of power.

THUS when a serious dispute arose between the series of the displayees and the minagement of the United States Ariganic Company, each side held a series of secret conferences in its efforts to get the best of the other. That is why they tried to get the best of the other. That is in why they tried pers each morning published detailed reports of the meetings of each side. As a result, each organiztion was rugatored by a wrangle in which every one accused every one else of breaking faith.

There was panic in the political world when, after each secret caucus of party leaders preparatory to organizing the coming Congress, the papers of the other parties published full reports of the proceedings.

And these mysterious reventions of secrets spread to international circles. The plottings of a circle of Berlin royalists, who aimed to reactore the German monarchy, was revealed to the republicang coverment just before the coop was to be sprang. On the other hand, the minutes of the executive sensions of the Conneil of the Langue of Nations modelshy of the Conneil of the Langue of Nations modelshy of circle and the sensitive sensitive sensitive of the Conneil of the Langue of Nations modelshy of the Granult of the Langue of Nations modelshy of the Granult of the Langue of Nations modelshy of the Granult of the Langue of Nations modelships of the Granult of National Section 1990 (Section 1990) (Secti

Such are only a few of thousands of incidents picked at random from the regis of terror that accompanied these mad attacks on the privacy of the world. Of course some good did upring out of this evel. Certain revelations of business men and politic distancey results in making business men and politic a long time to come, when it finally downed on the public that some mysterious say system was rersering thick walls, distance, and darkness of no avail in the keeping of servers.

A newspaper humorist revived the fable of the "Little Black Main" who were also up yrying and telling secrets. Presently it ceased to be a joke. The sophisticated were convinced that some clover blackmailing agency was at work. Those inclined to be sportsitious became positively to. All shared in the panic. No man knew when his most secret act or word might not be publicly quoted to his detriment.

Men lost confidence in banks and in business enterprises as the secret drain into Professor Fleckner's coffers continued unchecked.

As this proceeded I continued to wonder vaguely why Priestly and I were no more actively indigunu at what we winnessed; or why we were not carncally plotting measures to thwart this new archivillain. Priestley ahared my wonder in the same vague way, and we discussed it occasionally in half-heatred (gahion. We seemed to sleep or doze heavily most of the time and to be in a semistruor even when awake.

ONE day, while we two were at luncheon tocoffee before he had tasted it. He wipset his cup of the before he had tasted it. He wipsed up the mess, and did not ask James, who waited on us, for another cup. That afternoon, instead of dozing about in his chair as usual, and as I did, he was wide awake.

He walked restlessly about and chaffed me for my drowsiness. J ate in the afternoon he paused in front of my chair as I roused myself from one of my frequent naps, and declared that he'd give a good part of the Treasure of Tantalus for the cup of coffee he had spilled at noon.

"I never realized what a slave I had become to that drink!" he complained.

I showed no interest in his habits. Suddenly his face lighted. He shook me by the shoulders.

"Wake up and listen !" he exclaimed. "I've got it now. They've put drngs in our coffee right along to keep us doped and tractable !"

And that proved to be the truth. After that we emptied our coffee cups in our wash-bowls when our attendant was out of the room. And straightway our chronic drowsinces and lack of moral sensitiveness vanished. We took good care to conceal this change from Fleckner and to watch his manipulations of the revised crime trust machinery with renewed interest.

The professor had now wearied of bank robberies and was using the crime trust agents as collectors in a continuous series of blackmailing enterprises. With his malicious rays he followed the sum around the globe, keeping all the civilized world in constant terror.

In addition, be was steadily widening the influence of his agents in the big business corporations of the world by crafty use of his knowledge of inside history. He alternated this with busy schemes for promoting liberal legislation in the parliaments of the world and in the Council of the League of Nations. He was wielding a power such as Chandler in his wildest moments never dreamed of.

As for the President-tect of our country, he was defined for snow time to hold no more conferences with the black-robid plannon that had usurped his place. That first visitation had hene to much for him. Chandler took to his bed next day with a server attack of nervous prostation and eventually was declared physically imporent to assume the offec to which he had here (setted. Hence, on March 4, Vice-President Horace Kildare was insagurated in his place.

his place. This turn of events irritated Fleckner the more. He intended wreating from Chandler the details of how the turned the bot of the trust over to the real cutoflad of the treasure, and from that startingpoint he would tread down its hing/place and its keeper. For in the midist of all his multifarious activities Fleckner never lost sight of his chief object, to get his dutches upon that enormous accumulation of years of successful plander.

One evening, shortly after inauguration, when Prietiley and I were alone in my room and had made certain that the professor was busy manipulating society, Priesiley confided to me that he had at last deciphered the new combination of the telephonoscope at work, by cautiously watching Fleckner at work.

"Till get a chance some day hefore long to use it," he said. "I'm going to end all this. I'll connect with the district attorney and tell our story. What if I do sacrifice myself and my fortune? This can't go on."

Far into the night we discussed plans for carrying out this scheme. The main difficulty was to get at the telephonoscope without being blocked by Fleckner or one of his two men.

The chance came by more accident, a week later. Janes, who had be warkn at the time, had brought in the dinner trays for all four of us. Something proved to be massing, and he returned to the kitcher for it. Fleckner at the moment was hint over his notes with his lack to us. Priestuc, saring on sauden inspiration, reached over and quiekly changed our order cups around. That evening Fleckner and Janus drank the drugged coffee. Half an hour later the worthy pair were askeen in their chairs,

At length Priestley, after testing the soundness of their slumbers, went triumphanily to the control board of the telephonoscope, successfully worked the combination, and a moment later the screen glowed with the ray in full action. Then he seized the directing lever and turned the ray in the direction of the home of the district attorney,

"Now for the end of the crime trust!" he whispered excitedly,

#### CHAPTER XX

#### The Voice From Nowhere

THE district attorney of New York County lived in a handsone partiment in upper Riveroughfare flashed across the screen as Frietley ran his ny along the higher house numbers omil be came to the one be ought. Then, just inside, he proinsperied hall to the deak, and announced that Mir. Thomas Prietley wished to see the district attorney.

The hall attendant got the sensation of his life. He was a reader of the newspaces. To have an indicted criminal, of prominence, who had effected and the sense of the sense of the sense of the sense base of carbing him had been abandoned, was too much. The yourg man stared at Privately incredulously for a moment, then gathered his wits, and in a brightnend weight and the willow through the plone. After an awe-struck moment, he reind would see him.

"Eighticht floor, apartment twenty—" he began; but his voice was drowned as far as we were concerned hy a sudden whirring roar. The screen went blank, save for a pale yellow glow that showed the ray was still on hut that it was registering no images.

The roar penetrated even Fleckner's drugged consciousness, and he awoke with a start,

"What's this? What's this?" he demanded, jumping up, "What are you boys doing?" "The machine seems to have run wild. We were

"The machine seems to have run wild. We were trying to stop it," I hastily lied. "The combination has been tampered with! Who

"The combination has been tampered with! Who did that?" Fleckner demanded, leaping for the control-board.

"You must have left it on when you went to sleep." I found it that way when I heard the roar and came out of my room," Priestley ventured, ably seconding my mendacious efforts.

But now Eleckner was struggling with the levers and for the time gaid on attention to us. He confidently threw off the power switch and examined the intricate network of wires. He seemed to find no trouble. Then he threw on the power again, and the roung, was relaxed. Again the screent glowed pate results. Ngthing appeard on the screen, and the reading. Ngthing appeard on the screen, and the

Again he studied every detail of his mechanism, wiring, control-board, power-cables, and transformers.

"I can only guess that some big terrestrial electric disturbance has interfered with the ray and has put it temporarily out of control," he ventured at length. "A most interesting phenomenon ?"

He sat up the rest of the night making various tests and setting down extensive notes on the phenomenon, which I confess interested Priestley and me but little. We were too disgruntled at the loss of our opportunity to communicate with the outside world.

I wondered grimly how long the district attorney stood waiting eagerly to greet the man he had sought all over the world, and what happened to the nervous system of the hall attendant when he saw that amazing hero melt into the thinnest air before his eyes.

But just before daybreak, our interest in the vagaries of the telephonoscope suddenly awakened. For some time that roar as of the tumult of many waters had been slowly dying down, first a cataract, then a rill, then the low drone of distant rain, and finally the faint sighing of a summer breeze, followed by silence.

As the sound faded, the light on the screen grew gradually in strength till it was a bright glow. For a moment it became an intense white light, then slowly dimmed till it resembled the last faint flush of a sunset afterglow.

Fleckner had for the moment given up his investigation, at a loss what to do next. We sat, all four of us, staring curiously at the screen which, after doing our hidding so long, had suddenly turned rebel. Then into the bushed stillness of the room there came from the screen the sound of a human voice, a soft, girlish voice of ineffable sweetness singing an eery, haunting melody.

For long moments we sat breathless, enchanted, The song rose and fell, now near, now distant, like music borne over wide waters on a fitful breeze. It haunts me yet, after all these years.

I make no attempt to reproduce it here. None of us were musically trained. We kept a phonographic record of it, but musical composers who have since listened to that record found that the melody did not conform to conventional scales, and it defied their efforts to record it on paper and reproduce it from notes with anything approximating the original effect. The words, too, though pronounced slowly and with beautifully clear enunciation, meant nothing to us, and their syllables defied all attempts to record them by any alphabetical symbols with which we were familiar.

BUT meantime our efforts were bent on trying to locate the strange singer. In this Priestley and I took a lively interest. On our part it was in a measure idle curiosity, and relief at this welcome change from the sordid drama we had been witnessing, an anodyne to our disappointment at not being able to communicate with the outside world. But more particularly, we were enthralled by that voice and consumed with desire to see the singer.

And yet, mingled with that desire, I was conscious of a certain dread of the revelation. I do not know if it be possible for a man to fall genuinely in love with a woman from having merely heard her voice. I have never made a study of the amorous psychology of the blind. But I do know that the voice of this strange woman moved me deeply and I dreaded seeing her face lest it destroy the illusion.

Priestley and I exchanged no confessions on this score, but I noted, with a foolish feeling almost akin to jealousy, that his manner indicated a feeling even stronger than mine.

I thought suddenly of Miss Stimson and became perversely indignant at him. I have admitted that my momentary glimpse of the violet eves of that young woman had intrigued my susceptible and rather fickle heart. My admiration for ber sub-sequent conduct had deepened the sentiment dangerously. I had tried to stifle it, however, convinced that her heart was pledged to unrequited affection for Priestley. I had believed that he held for her no feeling but a kind of impersonal gratitude for saving his life. His ready interest in the voice of this unknown young woman made me sure of it. And, as I say, I was unreasonably indignant.

But while we youngsters were thus mooning about the room, Fleckner, forgetting for a moment all sordid and utilitarian considerations, was lost in a problem of pure science.

This pet invention of his, of whose every whim he had supposed himself master, had suddenly displayed a new trait. He must learn its secret

The dominion of the world and the Treasure of Tantalus could wait. Once more, for the moment, the master criminal was the calm, cold devotee of the intellect

The song ceased a few minutes after we first heard it, but the light stayed on the screen, showing that the ray was still active. And it seemed to remain focused on one region, for at intervals throughout the day we heard the song again, now far and now near, but always the same words. Once when the song came from a point so close to the foreground of the ray focus that it seemed the singer must be in the room itself just behind the screen, the singer stopped abruptly in the midst of the refrain. Then, in a melodious speaking voice, she pronounced a few rapid words. She was answered by a heavy, though not unpleasant masculine tone. A lively dialogue followed for a few minutes, then silence again.

"It's most baffling," Fleckner admitted. "I pride myself on my knowledge of languages, but I catch no syllable that seems to bear any relation to the European family of tongues."

"Means nothing to me, either," Priestley declared. "I've picked up, in my travels, a smattering of various dialects among the American Indians, the African and Mongolian tribes, but I catch no familiar sound. Of course, my knowledge covers only a minute fraction of the known dialects."

"You can prove nothing by me," I declared, "English, French, and Spanish sum me up."

James, the muscular, contributed nothing but stolid silence. The drugged coffee was still troubling him a little. Anyhow, acts and not words were his specialty,

"As for trying to locate this thing by any known electrical test," Fleckner went on, "I'm completely stumped. I don't want to take the machine to pieces for fear of losing the connection for good, and I want to locate that language as a matter of curiosity. My range and distance indicators register nothing at all. I can't understand it. I'm simply going to watch developments for a while. Perhaps something will appear on the screen that will give us a clué."

And late that evening, just as we were about to give up and retire for the night, his patience was rewarded. Priestley and I had already gone to our rooms when Fleckner, who had taken one last look at the screen before settling back in his chair for a nap, suddenly shouted out excitedly: "Something's happening! Come out here !"

We ran out and looked at the screen, which a moment before had been showing only a faint greenish yellow. It now glowed with a clear white light, excepting for faint shadings here and there which presently began to take definite form. In a few moments more the slowly developing screen showed the interior of a big open room.

We seemed to be looking down the broad nisle of a warehouse. On the right of the aisle was a row of hins full of semething that looked like coarse gravel. On the left was piled high a long tier of sibe, apparently some sort of building material, shaped something like old-fashioned bricks, only larger. We saw it all dimly as through a thin haze.

We studied this picture curiously, trying in vain to determine in what obseure corner of the world it might be. Studdenly the misty obscuration of our vision cleared and we saw it all plainly. The contents of the nearest bin and the end of the long tiers of bricks stood out in bold relief. A moment we gazed at it wonderingly. Then Fleckner jumped to his feet and shouted:

"The Treasure of Tantalus at last!"

The supposed gravel pebbles were precious stones, millions on millions of them glittering and shimmering with fairy light! The bricks were of solid gold!

#### CHAPTER XXI

#### The Singer Revealed

THIRRE could be no doubt of it. By this strange, rotationas acident we had been prewith flabloss wealth. Pickater verified our firstapplying the new reflective sportrum test which he had invested. Not only were the supplies of these most precision materials in the high storehouse, but we discovered that he building tisle was node of backs and stabs and grieters of gold: The floor was orient.

Here indeed, it seemed, was moral défectiveness developed into mathens i Chandler, on the alleged man above him who received the crime trust's treasure, had apparently converted the vast stores of the orrailized dream of grandeur rivaling the ancient conception of a golden hereafter.

But where was this trove? Of its location we were as ignorant as ever. It was more than before, our Treasure of Tantalus, lying in plain sight, but as much as ever out of our reach.

It had ceased to be an academic problem with Professor Fleckner. Gone was the calm concentration of the scientist and man of pure intellect. In his place was again the feverish, avaricious searcher for hidden riches.

Back and forth across the laboratory he paced, never taking his yess from the maddening picture of the gleaming treasure and cudgeling his brain in vain for some method he had not systeritrief for determining where the end of our magic ray rested. So the neglt wore away. Privatly surface of dozed at intervals in our durins. Morning came and we at breakfast in our durins. The mystery was beginning to hore us

Then suddenly there broke again that eery song. "If we could only determine the language or dialect she's singing, we might locate the general quarter of the globe in which your treasure lies." Priestley ventured. "Pity we don't dare invite in some language experts to identify it."

Fleckner stopped short and clapped his hands together in glee.

"An idea!" he exclaimed. "Good for you, Priestley! We can't bring the experts to us, but we can take our mysterious song to them."

Priestley and I looked at each other in alarm. During all the reign of terror he had inspired, Fleckner had never been so presumptuous as to appear outside his apartment or to abandon for a moment the pretense that he was traveling in South America. Secure as was his secret hold on the crime trust and through it upon the machinery of the law. it was still entirely possible that some person or persons unknown to us might connect him with Priestley, and the general public was still clamoring for the capture of Priestley and the twenty-milliondollar fortune he was believed to have fraudulently diverted from the public treasury. Fleckner once caught and held as a witness in the Priestley case would have a hard job concealing any longer the secret of his telephonoscope and the universal havoc he had wrought with it.

Now he was mad enough to propose calmly going forth and exposing to various outsiders, one of the results of the use of that instrument.

BUT the old man was not mad enough to fail to with the pranks of his invention he had not realized until now that his prisoner-guests were no longer in the drugged stupor in which he had been keeping them.

He looked sharply from one to the other of us, but naturally made no comment on our renewed mental acuteness. I wondered uneasily if he would suppect the language of the other of the other drug to some other article of our dist, perhaps in larger and more effective doose. I resolved at the first opportunity to warn Priestley that we must east sparingly of everything set before us.

At any rate, he set our minds at rest as to his next move,

"I'm not going to expose us to any danger," he explained. "Remember I'm still supposed to be traveling in the Andes, and it will be perfectly plansible that I should use a long-distance telephone from there. Just watch me work and see how simple and safe it is."

While he was talking he must have pressed the secret switch connecting up the apartment telephone, for he now punched up a sumber on the call-board of his desk phone.

"May I speak with Dr. Bonstelle?" he asked after a moment.

I recognized the name of the head of the Language Department of Columbia University, a worldfamous philologist.

"Dr. fonsielle" Plexker continued in a moment. This is Professor Rutus Flexker. You may have noticed by the papers up North that I'm taking a vacation tour in the Andes Mountains. I'm calling now from the City of Santa Beazos in northern Citik. I've strack a curious plexonemon in your lise and wanted to get your opinion on E. 1 would live unity to consult you. by know-fishance observe. A group of wandering minstrels, apparently a gipsy tribe, came down from the mountains yesterday and gave a musical in the Plaza here. They sang for the most part in the Zingaro, or Spanish gipsy dialect. But one young woman sang a little thing in an utterly different tongue. Neither I nor any of the natives I interviewed-including Indians of several different tribes-who were about the Plaza, could find any resemblance in it to any familiar tongue. I tried interviewing the gipsies, but got only suspicious shrugs. They wouldn't let me get to the girl herself. I made a phonographic record of the song and would like to transmit it to you if you'll put a phonograph in front of your receiver. You can let the different men in your department have a try at it in case it isn't at once familiar to VOU

Apparently Dr. Bonstelle swallowed the story and readily consented to the request, for Fleckner brought out the song record, put it in a machine, and placed it in front of his phone transmitter. Again I was forced to admire the consummate skill of the old liar.

"Just a moment, Professor Fleckner," I said placing a cautious hand over our transmitter. "Why not try him with the spoken dialogue, too 'That might be easier to read than the words of the song."

He looked at me'pityingly.

"Bright idea!" he sneered. "It would be quite a belp in case they recognize this language, and the conversation of our mysterious pair happened to give away the story of the treasure!"

He pushed me away from the phone and I subsided abashed.

But Dr. Bonstelle, after listening to the song and taking a record of it, declared himself as much in the dark as we. He recognized not a trace of resomblance to any of the general families of languages. He agreed, however, to have the men of his department try it out. Professor Fleckmer arranged to call him up in twenty-four hours and get his report.

Soon after Fleckner had completed these arrangements, there were further developments on the screen. The picture began to sway back and forth, revealing different sections of the golden warehouse, to grow dim and bright by spells.

The professor became nervous at this,

"I hope we aren't going to lose it naw just as there's a chance of solving the ridde. That's the exasperating part of being unable to control the instrument. I've proved this much, though. A terrestrial current of electricity of treunendous power has been set up by some science distributes. Our type have been caught and bed by it. They aren't dependently. We fill just have to be this current just with them until I can increase the power of the guerantors compute to offset the jurners."

He spent the greater part of the day equipping some additional generator units out of odds and ends of spare parts in his storeroom. He was nearly ready to connect in these new units when something else happened on the screen.

The swaying of the picture had been growing more violent at intervals as the day passed. Suddenly it shifted abruptly to the right. The interior of the big building slid off the screen and left us gasping in unbelieving amazement at what took its place.

We seemed to be gating down the length of a tread, deeg colino. Down its centre force a winding stream, along the margin of which rested curious, one-story houses, fail-rocied and remining. Towering, ragged walls arase on either side of the eation. Deep-cut, irregular arains, favolated of it writings directions. There was a little curious, sturied vegeation here and there of unfamiliar varieties, has the swaying of the picture prevented our examining it closely.

The overwhelming wonder of the place, however, was this: Nor merely all the houses in sight werehouse we far saw, the ground of the prest analygod and emerald and diamonis and other precious minerals in sizes such as no man had ever kefore dramed outside the pages of fails or the vision of the Appendipor. The great prepides were of addigens. The river flowed over golden sands and sparking pebbe greats.

The Treasure of Tantalus indeed!

But now the ray shifted again, and on the accerd? foreground lays a little dell at the month of a ravine that opened on the shining sands of the river-abure. There a little pocket of ordinary soil bad washed down and the dell was screened with dwarf trees and capted with moss and curious grasses. All the foliage was of pale greenish-yellow, as though its golden habitat had permated it is veins.

This scene became steady for a moment, and as we drank in its details the now familiar song burst again on our ears.

An instant later the shrubbery parted and the singer herself stepped forth.

# CHAPTER XXII

#### The Lady of Tantalus

THINK even our case-hardened old jallerscientis, Prokener, forgot his soridal aims for a moment, as we saw before us, for the first himming medoy late on of the golden woke whose the gauging sigh that correspond Priority. The her was at least as hard hit as 1. Even the ultra-phicgenetic John, Fleckner's second man, whose turn at wutch it was, let go a depchetable ild of haspheren, so inflected however, that it expressed the grantest measdentiation of which his name was combined.

My fore that the singer, once faced, would fail below the proteins of her write, bud hown utterly more analysis of the single state of the set angelow product of the single state of the single state of the pinan with life-single single single single single single material single single single single single single single singless hat favour will below her goeds, gencirclet of gold about her couplished in caved from odd from correspondent for the thin, ruby like of lise spreter. But shys should a fatuous old man bore his readers with a feedba attempt to pairs a word-jecture of a fase that embrailed him for a moment a halfshould be a straight of the should be attempt of found moyel: contrasting this idealization of wordshould with the interacy human face of hits Miss and the visual passed, burging head of hits Miss mitted to gase as briefly once. My enthrainerst with the visuan passed, burging heiding 1 and y refering of autisfation over my sense of femilia basaty. Tomo autisfation over my sense of femilia basaty. Tomo the high over proceeding the same charactory has been described by an explored by an explored.

But Professor Fleckner was wasting no time over mere admiration of a glorious face. He was busily adjusting his cinema machine and phonograph attachment to catch every move and word of the girl.

Meanwhile she stood by the river-brink gazing abstractedly into the gleaming water and softly humming over again the familiar song.

Suddenly she stopped singing and with a little exclaration of delight knelt swiftly and darted a slender hand into the water's edge. She drew out a small, irregular pebble, rusty black in color and, still kneeting, gazed at it raptly, with frequent repetitions of her little cry of delight.

What this precious find could be we were unable to guess from the fleeting glimpse we got. She was now holding it close in her cupped hand out of our range of vision.

She was so preoccupied that she failed to hear steps on the jewel-pebled beach. Arcoand a champ of shrubbery a man appared. He was a tall, weilshaped figure clad in a simple tunic, skin-tight trousers and sandals, all of the same golden fabric as the girl's garments. His hair was a shake darker than hers and fell uncut to his shoulders. He wore likewise a long, untrimmed, wellow beard.

The cut of his features suggested a relationship to the girl which his age and subsoquent attitude toward her clearly indicated to be that of father. But he blue eyes of the father were cold steel, the girl's glowed with the warmth of a summer sky. Awater was the leayned of his expression. There had noted so often in the pale orbs of Professor Fleckner.

He stood for a moment regarding the knoeling figure curiously. Then he crept stealthily forward and poered over her shoulder. At sight of what she held in her hand he uttered a harsh cry and seized her by the arm.

She leaped to her feet and faced him with wide, startled eyes, shrinking back and clutching her bauble to her bosom.

The father held out his right hand commandingly and held her arm roughly with his left, speaking a volley of barsh syllables.

A moment the girl hesitated and then reluctantly handed over what she held. The man held it up to his face and, with a grunt of satisfaction, thrust it in his tunic and strode away. The girl, as soon as he was out of sight, threw herself on the ground and shock with sobs.

All this time we bad caught only a flecting glimpse of the object that had caused two people so much agitation,

The girl was gradually getting her grief under

control when again a step sounded on the bark above her. The bashes parted and a young man about her own age stepped out. He was as perfect a specimen of masculine beauty as he was of the femipine. He was dressed in the same general style as her father. His complexion also was fair and his face abone with the idealism of healthy young manbood.

He caught sight of the girl and ran toward her with a cry of solicitude, arms-outstretched. She scrambled to her feet in confusion and shrank back bushing, but evidently not displeased at seeing him.

He seemed to ask her numerous questions, to which she replied in monosyllables. At length she led-him to the edge of the stream and, pointing to the spot where she had picked up the hauble, broker into volable speech. She was evidently telling the story of her find and of her father's action.

The young man knelt down eagerly and began digging furiously in the shimmering sand. Suddenly there was a call from the bank above in the harsh voice of the girl's father.

The girl started guiltily, spoke a low word to the youth and, with an answering call to her father, ran swiftly up the bank. The young man arose and looked after the girl for a moment with an expression of mixed affection and anger. Then he walked down the river shore and disapocered.

Though the little dell remained fixed on the screen for some time after that, there were no more signs of life manifested, and it finally faded to a barely perceptible outline.

Fleckner took advantage of this interlude to turn back to the building up of a higher power ray and as he worked, we debated the meaning of the scene we had witnessed.

For my part, I had become convinced that Professor Fleckner was wide of the mark in believing his errant rays had hit by accident on the crime trust's treasure trove which we had hunted so long in vain,

"If we had found noting more than the surgement of the strengt that we first splitted 1 would hope full of transmitted that the strength of the transmitted of the strength of the strength of the transmitted of the strength of the streng

T think you are partly right and partly strong? Peckner construct. Targere with you on the probable remotences of this region. Take agree with you maturel phenemenon. But remotences into her to a none in an airplane. Think now Canadler told the third when he tails the turned the transmer over to a on the screen, taking of the single giving in the lattice is discussed a remote three of attackive larders in this pollow sully while succiling for a time are singled by weahlh is your his down and in time surrounded by weahlh is your his down and in time surrounded by weahlh is your his for any and adds to it the stolen millions of the trust. He's not normal of course. But you note that a great mass of gold was in bar form and the diamonds and other jewds were stored in hims. Either that is some of the wealth he has brought in or it is some ready to be taken out and used in the outer world. Think of the power such wealth gives. We must find and control her.

"Yes," Priestley agreed, to my surprise. "We must find it as soon as possible. It's time, Professor Fleckner, to call up Dr. Bonstelle again and see if, they have located that language yet. There must be no delay in tracing out this region."

He seemed suddenly to be as greedily obsessed with the idea of the treasure as was Fleckner himself.

Fleckner agreed to this suggestion and got Bonstelle on the telephone. They had a long conference, mostly monosyllabic on Fleckner's side, from which I gathered that the head of Columbia's language department 'could' give us no aid.

"Neither he nor any one in his department can make anything out of it," the professor reported after he had hung up., "He gave me a long discourse on the hatory and philosophy or language. The only significance in what he said was that certain fundmental sounds in the song could not possibly be reproduced by any normal, human-speaking appartum. The mystery seems deeper than ever."

Fleckner turned back to his generators, and Priestley, after standing for a moment in unseeing abstraction, went to his room.

I ast for a few moments mooilly runninating on the strangeness of Priestley's attitude. Then, obeying a sudden impulse. I stepped over to his door. It stood algehtly ajar. I had no intention to eavesdrop. I started to knock, but at that moment I heard his voice within, He was pacing the floor and talking to himself.

"My little Treasure of Tantalus," he murmured. "Poor little girl: I must find her! I must find her and save her from that golden hell!"

#### CHAPTER XXIII

# A Scrap of Strange History

T was not until the middle of ibe next forenoon that Fleckner completed the assembling of his additional generator units and was ready to try them in the hope that he would be able now to overcome in a measure the influence of the master current and have a little better control of the screen picture of this mysterious Valley of Tantahas.

Meantime we had continued to catch vague glimpses of it at intervals, but no more that were as steady and clear as that scere by the river shore. Nor did we hear the strange song again, though we caught occasional scraps of conversation.

Pristuly roamed about in impostent resileances, every few minutes uriging Fleckner to harry his work. For my part the coverly of the thing had worn off and 1 found ny thoughts partying chewhere: I was wondering about the comfort of little Miss Stimson, bluedne away in solidary configuence somewhere'n the hig building. I resolved to speak a word for her when: at length Fleckner had completed his reconstruction job and ast down for a minute to rest before trying it out. "Don't you think, professor," I ventured, "that you're being a little unfair to Miss Stimson? She's missing a most interesting spectacle. She was in on all the forepart of our experiments and naturally has great curiosity as to what is going on now. What harm could she do in here, as long as she has no communication with the outside?"

"Bere's something in what you say," the old man agreed. "Besides ble has a keen mind, as we've discovered and might be able to help us with sagegestions. But it won't has necessary to have her in here. There is a small portable telephonoscope equipment in the storecore, one of my easily experiments. Thi have John set it up in her room. She'll be able then to watch in on our screen. If give ber the cinema films of what he's missed, too, so she can hring the story up to date."

He called John and gave the order and assured me presently that the young lady was now enjoying the same privileges of outlook as we were.

The terd of the additional my emits not with considerable success. When Fleckner witched them on, the picture on the screen which a monest hefere had been an inditinguishable blue, suddenly lagged into dear relief. We were looking once more down the broads taile of the big trassary addenly lagged on the other the long piles of poles heicks. But now, instead of heing allelant and Bieless, the scene was one of the buister human activity.

Groups of short, thick-set men, clad only in breech-toths of gold net, were hard at work moving the treasure. These men were in sharp contrast to the bandsome specimens of manhood we had already seen, not merely in the shape of their bodies and the lower inteligence of their conntemances; their skins were of a ghastly greenish hue.

There were several gangs of these repulsive creatures at work about the warehouse. In charge of each gang was onte of the evidently superior race we had first seen, ivory white of skin, alert and intelligent.

Professor Fleckner found that the increase in the power of his rays enabled him to manipulate them with a fair' degree of control within certain lunits, He was able to move the focus about pretry much at will row, shifting various sections of the golden willow on his screen. But he was wall unable to do any of his former close work, to control done-ups of the screen. But he was wall unable to do any of his former close work, to control done-ups observed. He tried to have one of do solutely to respond. He tried to have ones of do images into a longly spot in the valley, to see if it could be dong, but got no results.

But with the power we had, we were able to learn much. Our interest entered on the scene of activity in and around the big warehouse. Professor Fleckner was positive that some öf the treasure was now about to be transported to the outer world and, that he would be able to follow it with his reinforced rays and at leart the location of the valley.

Some of the green-hued men were hicked like draft animals to low, rude trucks, made, like everything else we had seen so far, of solid gold. The workers were piling golden bricks into some of these and were shoveling precisious stones into others.

With all my constitutional indifference to wealth, it gave me a curious sensation to see those trucks piled high with uncountable riches, as though they were so much gravel or clay bricks. The contents of any one of the trucks would have made me a rich man for life.

Eagenty Fleckner followed with his ray the first of the rucks to leave the warehouse. It went out a winding gold-paved road along the river shore, past many houses of gold, to a spot where a square excavation had been dog. Here baside piles of similar broing the collect to waith out of a low with these bricks, mixing the genus with cement and preparing a concrete to make the cellar bottom.

Again Fleckner's hopes were dashed. It was gradually dawning on him and the rest of us that here was a land where gold and jewels took the place of earth and rock and had no value except as ordinary building materials.

So with a snort of disappointment, the professor turned his rays back to the warehouse.

"For the present," he said, "I think we'd better study these poople and get some clue to the meaning of their tongue. When we can understand there speech, we can learn something, of what all this means, I still think, likin; that I ve located the real tatic, Orientia type of mind, who has carried out here on earth, his dream of a heaven of golden splendor."

We were able, quite clearly, to catch the scraps of conversation that went on in the foreground of our warehouse picture, so we sat down to a steady period of linguistic study, keeping, as usual, cinema and phonographic records of all that occurred and returning to our old system of taking turns at watch.

Miss Stimson now took an active part in our study, flashing occasional suggestions from her screen in the other apartment to ours in the laboratory.

We learned another curious fact about this Golden Valley of Tantabas. There seemed to be no day or night there, only a steady, unbroken glow of soft light. The men in the warehouse worked for a period roughly corresponding to our day and then rested for a like period.

"That tends to confirm your guess that this valley might be somewhere within the South Polar Circle," Fleckner said to me. "It is now daylight for six months there. This seems to be our first real clue to location."

The weeks that followed were monotonous enough, excepting for the occasional disovery of the meaning of a word. Each new word caught by associating it with some object or with an act of the speaker became an event to be looked forward to cagerly. It became a game with us, each trying with the rest to see who could locate the greatest number of new words.

GREAT was our triumph one day, when by concatch the general drift of a conversation between two of the foremen, who sat on a pile of bricks in the foreground and talked earnesily for over an hour after the laborers had stopped work. We had seen these two in conference many times before.

We took advantage of the laborers' sleeping period that day to go hack over all our phonographic records of speech and make translations.

Patching all our scraps together, we made out a connected story of absorbing interest. It seemed that one of the two foremen was a new man in the valley. He had recently wandered in by accident through the "Great Ravine" from "Beyond." His companion in their conferences was telling him the history of the valley and instructing him in its ways.

The story we gleaned hinged abdit a mysterious "treasure" which the pople of this valley possessed. In this strange land where gold and precious jewels were common as the dirt under the fet of us ordinary earthlings, there was an article so precious that men lived for it, islaved for it, committed crimes and died for it. What such a "treasure" could be was beyond our power of imagination.

For many ages the green men lived happily in this valley in savage simplicity, wearing no clothing and dwelling in caves, or rough huts of gold. Never having heard of the "treasure," they were happy and never fought among themselves, for each had all he desired, and sought nothing from his neighbor.

Then down through the "Great Ravine" from the "Beyond" cause and settled among them the men of 'ivery skins, straight, tall, and beautiful to look spon. And they dressed in robes of spun gold and had implements and diabes of gold and tools with which to fashion them. They had also, each man, some more mew and very rare, the green men looked upon cagefy and covered.

Then said the ivory-skinned ones to the green-hued men of simpler minds, if you will work for us and « build us houses of gold fashioned as we shall show you, we will give you bits of our treasure.

And so the green men worked for these new masters and were paid in bits of treasure, but being stupid men could build these houses only as the masters watched and directed their labors.

And when the green men saw how coinfortable were the houses of gold, they asked the masters to direct them while they built houses for themselves. This the masters agreed to do if they would pay them back in the treasure they had given them. And so they did.

Then when the green men did more work for the mattern, the masters paid them with leaves of worthless gold that were promises to give them treasure acception of the masters, "we are keeping the treasure hidden and safe, but these leaves of gold will mean that you hold a share in it. Now will show you how to find and dig it up and let you keep half of it."

So the green men found a little treasure and kept half of it until they saw how useful were the masters' tools and dishes and how beautiful was their clothing. Then the masters sold them these things for the treasure the green men still had, but they paid the green men for the work they did only in the goldleaf promises to gav treasure.

So the green men continued to work more and more for the masters in hope of some day getting back some of the treasure and they fought and stole among themselves for the little treasure that was left among them. But they never dared light the masters because they were too cumming and powerful.

Then there had come down from the Great Ravine, Madga the Great, with his beautiful daughter, Olanda, who was then only a baby.

And Madga was more cunning yet than the other masters and he had with him more treasure than any of them. The other masters all sought his favor and he traded among them till he had most of their treasure also. And so he came to rule over them and also over the green men.

And now that Olanda, the beautiful daughter of Madga, had grown up, many of the young masters desired her for a mate. But her crude and dovetous father had decreed that he should have her who first brought him one full measure of treasure.

Such was the story we gathered from our fragmentary records and I tried to set it down as nearly as possible in the simple speech of the narrator.

Looking hack to the record of the little scene by the river between Olanda and her father, Madga, and the yoing man whose name we now know was Grudga, we were able to interpret that Grudga was one of Olanda's suitors and apparently the one she favored most. She had found a hit of the mysterious treasure and her father had smatched if from her.

Here Miss Stimson broke in from her screen in the other apartment :

"None of you has translated the song yet," she said triumphantly. "I've just worked it out. Would you like to hear it?"

"By all means !" Priestley exclaimed nagerly.

These are the words she chanted in a surprisingly close rendering of the original melody and a voice which for me, I confess, held more charm than that of the singer of Tantalus:

> I am the Treasure of the Valley Where my proud aire rules in glory, Many there are who shall find me. He who is worthy to hold me Must bring of this lesser treasure And pay it fully and freely in proof that his heart is ubdek. For I am the Treasure of the Valley Where my proud size roles in glory.

#### CHAPTER XXIV

#### Beneath Our Feet

WHERN bit gift finlade this resultion of her firstl's vangebraue song i glauned at private sen how he had taken it. He to lock at little creatlation. I was conscion of an unreasoning fieling of the sen of the did not respirate her feeling, but was lavsling bases.

"T am sick of the very sight and sound of treasure " was his final petulant comment on the song. "It seems quite essential, though, even in affairs of the heart. Come! We're wasting time. Have you any more inspirations, Professor Fleckner, for locating this mysterious place?"

Professor Fleckner eyed him shrewdly and chuckled. I think that he realized for the first time that our romantic coworker was madly in love with the mysterious Lady of Tantalus.

"Priester," he lawy or rainers." "Priester," he lawyed, "for a young man who soorns treasure so much, I must say you show an amazing impatience to get at it. I suppose what you're after is to find out the nature of the mysterions stuff these fellows in the valley have been making so much fuss over and grab off 'one full measure' of it ahead of the other young hucks in the list. It beats me, though, what that stuff can he that is so much more valuable thas gold and jewels that they nas the latter for building materials.

"However, I haven't any more ideas about locating the thing. I'll have to keep experimenting with the adjustments of my instruments, agd if necessary add further ray units until I can get the indicators to record direction and distance again. Perhaps in the mean time the terrestrial current that's playing have with us will subside.

"I see our green and white folk are stirring again in the valley. Let's get on with the story."

So we turmed back to the screen on which we'r shown the images of our strange people hegimning their takks again. Profesor Fleckner succeeded, this ime, in exploring the valley as little more widely. Presently we came upon a house of gold much larger than the rest, half hidden in a hig rock eleft surrounded by high, golden palings. A cohort of green men armed with heavy gold cuises guarded it.

While we were examining this curious structure, Olanda, the singer, came out of the gate. We judged then, and rightly as it proved, that this was the palace of Madga, her father and chief of the valley.

The girl hurriced down the river abore until also came to the filter locow where we had first seen her. She had in her hand a little golden spack and with this she heptan hashly digging in the sands along the water's cope. It was here she had found that bit of the mysterious uncompared that the origination of the same that Buchnethy is here also holding for more of it. It was buchnethy is here also holding for more of it. It was or other hand dag there many times since the finding of the first treasure.

After an hour of fruitless search she threw down the spade petulatily and turned away in despair. For a long time she stood staring off over the water in deep thought, now and then stooping and picking up a diamond or amethyst or ruhy and abstractedly tossing it into the stream.

Suddenly her eyes widened as with the dawning of an idea. She clapped her hands in delight and sped away down the river road. In front of one of the houses that lined this highway her ateps lagged and she began to hum softly her familiar melody.

She had nearly passed the house, when a young man came out of the door, and ran toward her. He was not the favored lover we had first seen with her.

"Olanda," he called. "May I walk with you?

"You may," she replied, "if you'll comfort me a little. I'm in trouble."

"Trouble?" he said, falling in stop with her. There could be no doubt from the expression on his face that he was one of her suitors. "You know I would do anything I can to help you. What is it?"

"You can't help me," she answered. "It takes treasure to help me." "Treasure!" he exclaimed, stiffening a little. "But

"Treasure!" he exclaimed, stiffening a little. "But I have it, a little of it. I have been saving it for a purpose. I must have a full measure of it before long if I am ever to be hapfly, Olanda."

She smiled back at him so understandingly that his face flushed with hope.

"But I need only one little nugget and I need it now," she said. "I must have a new robe and my father won't let me have it unless I find and give him one nugget of treasure. He is growing more of a miser all the time. He thinks I am finding treasure and hiding it from him, bat Fm not, Oh, if you could only let me have one little nugget to get my robe. I will repay you when I get another."

The infatuated youth hesitated only an instant. Then, bidding her wait, be went into his house and returned in a few minutes with something tightly clutched in his hand. He gave it to the girl and she hastily concealed it in her role. The look she gave him was a rich reward.

"Now I must go home and get my new rohe," she said and left him to his musings.

But she was no sooner out of his sight than she slowed her paor, and went thoughtfully along, head howed as though considering her next move,

"Olanda?" came a joyous hail from the mouth of a ravine she was passing. Another youth stepped into sight and beckoned her,

"Come in a little way where we won't be seen," he said. "I have something to show you."

The girl obeyed wonderingly.

"First tell me, Olanda," the yonng man asked anxiously, "can I hope that you wish it to be me who brings the measure of treasure to your father?"

The warm, shy look she gave him was answer enough.

"Never was there a surer bope," she whispered.

"Then look," he said proudly, displaying a golden measure he drew from his robe.

Their heads bent over it together. We could not see the contents, but they caused the girl to cry out with delight,

"Almost half a measure already !" she exclaimed. "Where did you come by such wealth?"

"I searched and found them during sleep times when no one could spy on me. I dug them from the rocks up along the Big Ravine. There are no more there, for I've searched every space. But I know I'll get the rest." "And if I had only three of them now I would

"And if I had only three of them now I would be happy," the girl sighed. And then she repeated the story of the new robe, only this time she placed her father's demand at three maggets.

"But if I give them to you," the youth demurred, "it will take me that much the longer to win you." She turned away in disclain,

"If you are to turn miser like my father you will never win my heart," she sneered,

At that be capitulated and in a moment the fair schemer left him with the three nuggets stored away in her robe beside the first.

All that day she reamed about the river shore and contrived to meet function trenty low-acids availand, each of whom, in his turn, listened to some variation of the stary of the new roles and parted with one on buy her from her father. Each was made to think he was the favored usinor and that greatly strengthened his generosity. Three times during the day when the collection of magets such the role the father to be outperformed and here the role three the listened of the lister of the lister of the lister burded them.

The last time she visited the cove, she stopped first at her father's palace and when she reached the burial place of the treasure she took out from under her robe a golden measure. She scoped out the buried nuggets and piled them in this measure, then reburied the whole.

Again she kept the treasure hidden under the edge of her roke so cautiously that we got no chance to analyze it.,

By now it was sleep time again in the valley. But the girl, instead of going directly home, strolled a little way up the glen and sat down on a golden boulder, as if waiting for some one,

A few minutes later, steps were heard above her and Grudga, her favored lover, swung himself down the bank.

She sprang to her feet and went to him in excitement.

. "I must leave at once," she whispered, drawing close to him. "After you are sure all others are asleep come here again and dig in the sands by the river where I found the nugget that day. You will find there the measureful you seek."

Then she turned and fled. Her lover, his face shining with elation, left the glen in the opposite direction and in a few moments all was silent in the valley.

I had been so absorbed by this clever plot that I had forgotten to watch Priestley. But now, at this final revelation of the character of his lovely lady of Tantahus and this decided setback to his romance, he arose and went abruptly, to his room and closed the door,

"I think I'll snatch a little sleep, too," I said. "Call me if there are any complications when the young man digs up his treasure or if you get any new clues.".

I must have slept for some time when I was awakened by an excited cry from Fleckner. Priestley was already by the screen when I got there.

"Nothing new has happened in the valley," Fleckner explained, "but I've made a surprising discovery. It isn't a valley at all, but a great cave!

"I put in another generator unit aiter you two left to east rife the machine out again. India good deal better control of it. I began exploring up and down the ciffs with the rays and subdivily iound that where there should be blue sky overhead was a solid roof of gold, about it douand fer above the river level. This work is with the part of the show the river level. This work is with the part of the show the river of the show of the show the river of the level. This work is with the part of the show the level. This work is with the show the show the head to the inhibitiants of the eavy. There must be opening to the air somewhere, but I haven't discovered them yet.

"But that's not the best of my discoveries. After that I tried my ray direction indicator again and found it working. The ray is pointing straight down.

"Our Treasure of Tantalus is directly beneath our very feet!"

#### CHAPTER XXV

#### **Olanda's** Plot Overreaches

PROFESSOR FLECKNER'S delight at his discovery was unbounded.

"Treasure of Tantalus!" he raved. "Here we've been hunting for months to find the pury stealings of the crime trust and right beneath us, right under little old New York is treasure greater than the present combined wealth of the world. And, it's ours, ours for the taking! Wait till I get hy instrument to working perfectly again and well

#### 786

make old Madga our slave. He'll bring cartloads of gold and jewels to our door whenever we send for him. I believe Chandler told the truth. He wouldn't be wasting time trying to be President if he had known where this treasure lay,"

"But," I broke in, "do you really think this Madga is the real head of the crime trust? Why should be need to direct a big organization for plundering society when nature gave him such wealth?"

"Ah, my boy" Fleckner countered. "It was power he wanted. What is treasure without the power he he wanted. What is treasure without the gover the land to use wealth as a hait to make matural reasure-house or pay then out of it when he could make them astell their own pay and then hand it over to him to keep as well? The stating was just to joly fram along. You see, he employed with this mysterious of here Treasure by which his mystem is followers?

"And those other people in the cave, who are they?" I persisted. "Oh, doubtless the green men are prehistoric sav-

"Oh, doubless the green men are prehistoric savages who got lost underground ages ago. The white men are probably descended from early white settlers who wandered into the cave and also got lost. But I must get husy and tinker up this old machine so I can find the entrance to our cave of Tantahas."

While Fleckner worked over the telephonoscope controls, Priedlay, more resites than ever, was used to at still two minutes in succession. I could read his thoughts in the transparent contensance as of the beautiful Chanda had not destroyed his infatuation. He was consumed with a favore to get to ber before the lover she so far lavored could reap the frights of her trickery and chain they from her failer. Here, the lover she so far has not destroyed his infatuation. He was consumed with a favored could reap the frights of her trickery and chain the from her failer. Here, we can be able to be the source on present have self before her in person.

I confess that F myself was more than half convinced and not a little anxious to bring on the denoument. To mitigate my impatience, I whiled away the time by reading the newspapers, which in our excitement over the affairs of Tantalus, we had neglected for some days.

Professor Fleckner's preoccupation with other matters and his inability any longer to use his telephonoscope at will had, of course, removed his guiding hand from the malicious activities of the crime trust for many days.

But a glunce at the papers showed that the reign of serror he had started had goot on under its own minimum, increasing like a snowball rolling down advitted had result, as the gauge would not dive to advitte had result, as the gauge would not dive to sat without its leader's orders. But the publicity given to the series of inspired rolleries and blackmailing plots had evidently strred to if the the monally defaultion of the strength of the strength of the the paper tenned each day with reports of a worldwide critic wave.

The distrust in banks and business corporations that be had started had grown until the nations were in the threes of a financial partic. Conutes business and bank failures were noted. Unemployment for the first, time in half a century had again become enidemic.

In the political world the results were even more serious. The two or driver instances of apparent bad faith on the part of statesmen, manufactured by the professor, had set the iraquinities of the politiciant to work. No one any longer trasted any one else. Dissensions were breaking our everywhere batemen the component nations of the Langue. The Langue Coundb way rest with strice. It looked as the approximation of the Langue first were threatmed and as if aucher world was were inminent.

A minor phase of the activities of Fleekner's Frankenstein was an epidemic of reports of disappearing persons, started by the kidnaping of the twelve men who knew the telephonoscope secret.

Every man, woman or child who was lost sight of by family or business associates for a few hours was reported kidnaped. Miss Stimson's disappearance had been noted in lurid headlines among others.

I had nearly finished my reading when, on the front page of the page of the day hefore there leaped before my eyes a story that at first amused me greatly in spite of my heartsickness over the takes of havoe I had been digesting. Then, as I read it through, I was filled with consternation. This was the headline.

#### WORLD FAMOUS SCIENTIST REPORTED AMONG MISSING

#### Professor Rufus Fleckner, Celebrated Inventor, Believed Kidnaped by South American Bandits -Last Seen in Northern Chile

The fiction of a trip through the Andes which Flockner had arranged as an allbi, by projecting his image into various South American cities and giving out interviews there, had proved a bonnerang.

There was a semiational interview with Dr. Bootiede et Columbia. University in which the bodd of strange largenge be had consider him shows. Hence, and the strange largenge be had consider him shows. Hence all, however, the best of the strange has a product from the best of the strange has a first been been strange between the strange has from largen to term, it had besome apparent that be been missing for some time the Chilana because alternative strange and the strange has a strange the strange strange strange and a strange strange strange strange strange strange abarrows for general the the strange strange and apparent strange strange strange strange strange strange apparent strange stran

Meanwhile his friends in New York had become greatly exercised and now proposed asking the police to break into his apartment to seek possible clues as to the litherary he had planned.

It was this last proposal that filled me with alarm. I tried to abow the article to Fleckner but he waved me away so impatiently that I decided to wait a little till I could get him to give his attention to the seriousness of this new development.

In case of a legalized attempt to enter his borne, Fleckner had counted on getting any such order revoked by bis hold on the legal machinery through his power over crime trust agents. With the telephonoscope out of control this, of course, was impossible.

I, therefore, became as interested as Fleckner and Priestley in seeing the repairing of the instrument hastened. He was now patting the finishing touches on a new set of generators. "I watched with beathless expersess while he was connecting them up. If the found this time that he could now break the rays away from the terrestrial current and use them at will as letters? I remain the above thim the hast newswill as the other of the set of the set of the laboratory.

But just as be tightened the last screw of the new battery, something happened on the screen that diverted my attention from affairs on the surface of the earth. I was destined to forget for some time to come all newspapers and their similar warnings.

.Grudge, the favored suitor of Olanda, was sticiliily entering the little dell by the river to dig up, as the girl had told him to do, the measure of "treasure" that she had so craftly gathered and buried there. He reached the point she had indicated and with trembling engenesis dug in the sand with a golden spade until he uncovered the measure the girl had buried.

He clutched it to his breast and drew a fold of his tunic over it. Then as stealthily as he had come, he started to leave the ravine.

"Now, Olanda, dear heart, you are mine?" he murmured joyously.

But at that the shrubbery parted and a sinister figure stepped forth. Grudga stopped in alarm,

"Hendriga, the half-breed !" he gasped.

He turned to fice, but the other leaped forward and hore him to the ground.

The newcomer was a powerful figure, with the beary, nuscutar development of the green men, and the full, straight frame of the white men combined. His have was light but a slight greenish cast showed the strain of inferior blood. His youthful features were regular but their expression was one of cruel cumnine.

"So Olanda is yours?" he snoered. "Not while Hendriga has power in bis arms."

He clutched his mighty fingers into the throat of bis prostrate rival until the latter's gasping breath coased. Then he transierred the measure of treasure to his own tunic and contemptuously tossed the lifeless hody into the stream.

"Now Hendriga will claim the fair Olanda," he muttered as he walked swiftly away.

#### CHAPTER XXVI

#### Time Slips Its Cogs

T was the voice of Priestley that first broke the spell of horror that held us.

We must stop him! We must stop him! Try the projector now!" he cried, lesping for the control-board.

But Fleekner was ahead of him and already working frantically at the lever that might project our images down and confront the ficeing murderer,

It was of no use. The projector failed. Fleckner had to content himself by following with his ray the form of Hendrigs who was now well on the way to the bouse of Madga, his prospective father-in-law.

The rest period was just ended. Beyond the golden stockades could be heard the busile of the awakening household. The green men who had stood guard during the rest period were about to change watches with the work period guards. There was a voluble chatter of greetings and scraps of gossip.

Hendriga made known to the guard at the gate that he wished to see Madga, the cheft. While the guard took the message within, the half-breed stood engerly cycling the shiring gold wicket as if he could ill restrain his impactneet to state this intriumphant errand. We beard the shuffling steps of the guard returning and heard bim fumbhing at the chain within.

At that instant there was the snap of a broken circuit in the network of the telephonoscope wires under the control-board and the screen went blank.

"A curse on that fuse !" Fleckner muttered, throwing open the fuse-box, ripping out the melted metal and slipping in a new one with the swift precision of his practised fingers. "That added battery of generators overloads the thinr a fittle."

He made some rapid adjustments among the bewildering mass of coils and switches.

"There, that's better," he announced. "I'll get a little more power in the ray now."

I had anxiously watched the clock while this was going on. A shade less than three minutes passed between the cutting off of the picture on the screen and the instant when it flashed back as Fleckner switched on the power of his repaired instrument.

We stared in bewilderment. At first it seemed that the ray must have shifted and given us an entirely different outlook,

But closer inspection showed the same dutline of overhanging precipice and the house in its deep cleft. The dwelling was of the same form and size. The river passed it at the same sweeping curve. There was the same vista of the valley visible from the gate.

Yet the gate which three minutes before had been in perfect repair, now hung half open from a single hinge. A hytoken bit of chain dangled from its latch. The golden paings when we last saw them had gleamed with the brillancy of frequent polishing by green-hued slaves. Now they were dull and hattered, as from long neglect and lack of repair.

The roadway in front of the house that had been kept in perfect condition, showed great eracks and worn gaps. What had been next grass-plots between the road and the poling three minutes before were pathese of weeds. Between the palings and the house, where before had been close-clipped shrubbery, were lig trees.

And the sturdy, laughing yoring guards, who had stood alertly in front of the palings a moment before, some dozen strong, were all gone. In their place there perched on a boukler by the gate a dirty, dejected old man, looking more like a beggar than a guard.

What could it norm? This could not be the same place. Our rays must have been diverted by the blowing out of the fuse. This must be auother near-by cavere, I. conjectured, in which a prosperoso scare laid formerly dweth. Perhaps Madga himself had once lived there and batth this bouse and later for some reason moved to the other and artificingly similar valley and duplicated the atractures in in E. B. formances of this strange passarc-directive. I voleed these theories to Pickener.

"That may be," he agreed. "I was thinking something of the sort myself. We'll soon find out."

He started to swing the rays about and search for another cave when we heard voices within the great house, high-pitched, angry voices, speaking in the now familiar tongue of the cavern.

Fleckner sent our rays through the open gate past the neglected garden into the house. His last addition to his generator power had enabled them once more to penetrate surfaces.

In the main hall were three people engageei in a heated wrangle. There was something about each of them strangely familiar yet weirdly different. There was a middle-aged woman, tall and still slender and fair of skin. Her features were strikingly like those of Otanak, daughter of the chief. Infeed she might well be the girls mother. But he exoression of the face was hard, cold and petulant.

The old, well-preserved main beside her was even more like Majes, father of Olanda, than was the woman like his daughter. His was the same erect figure, arrogant bearing, and crafty, avarichous expression. The features seemed an almost exact distort are the same service of the same erect distort are the same service of the same service in their flowing hair and beard. Aladigs's was rusty gold. This mar's snowy white.

And the third member was startlingly like Hendriga, the half-breed, excepting that he was older and his hair streaked with gray.

THE first words of the woman startled and bewildered us even more than what we had already seen.

"You treat us like children, my father i" she complained, facing the older man with blazing eyes. "They call me Olanda, daughter of Madga, Chief of the Valley. I am more like Madga's slave. Not for twenty years now have I so much as seen a bit of 'treasure,' not since this creature bought me from year."

We looked at each curiously, each wondering if the others saw and heard the same thing,

"Yes, he bought you dearly, worthless girl, and I made well in the selling. You ask me for "treasure" now? Have I not kept and clothed you both these many years, and when did you pay me any 'treasure' for it?"

"We have worked and skeed for you when your old slaves field from you because you abused them and never gave them pay except useless promises of 'treasure,'' the bonan broke in. "I'I had not bad some of the blood of the green men in my veins and been able to control them, therefore, they would have mardered yoa long ago."

The woman looked at the speaker in loathing.

"Don't talk of marder, Hendriga," she shuddered. "I have not forgotten how you won me. And don't boast of your blood before me. I----"

She broke off suddenly.

"Enough of this," she added in a whisper. "Here come the children. It is not necessary that my bays hear how their father won their mother by killing the man she really loved."

"Nor how their mother furnished her purchase 'treasure' by robbing a score of other suitors," he retorted.

At that three half-grown boys rushed into the room,

"Mother ! Mother ! Don't let them get nie!" cried the smallest of the three, rushing up to the woman.

"He's found 'treasure,' mother," one of the others

cried. "We're just playing, you know. We're robbers, trying to steal it from him."

"What has the boy got?" demanded the old man excitedly, snatching the chubby fist of the youngest boy and prying out of it a small nugget.

The old man gave one look at it and threw itaway in disgust.

"Nothing but gold!" he mattered. "Will no one ever give me any more treasure?"

At that there was another loud report under the telephonoscope control-board, and again the screen went blank.

We sat and stared at each other for a full minute without speaking. Priestley was trembling like a man wth the ague. He was the first to break silence.

"Did you two see and hear what I saw and heard?" he demanded.

Fleckner, who was himself visibly agitated, looked at me as if to read my face. I could only nod dumbly.

"We think we did," Fleckner said at length. "What it means I can't imagine."

He began mechanically to repair the blown-out fuse, while Priestley and F communed with our bewildered thoughts.

This time he took some fifteen minutes at the work, and seemed in no hurry to turn back to that sordid, maddening mystery of the underground,

At length he threw on the current.

"I put in a larger main cable," be said. "It'll carry the current better and give the ray more power."

The golden palace again flashed on the screen. At the first glance we saw that still another change had taken place. Now the road in front of the building was almost obliterated. The palings were torn away: the yard was a tangle of underbrush and big trees that almost hid the house from sight.

Fleckner handled the control levers in a half daze. He sent the ray once more into the big room, where we had just witnessed such a strange scene.

Here we got another shock, for which, it is true, the appearance of things on the outside had in a measure prepared us. On a couch by the far wall lay an emaciated old man gasping for breath. Twice we looked before we recognized Madiga, the chief.

He looked as though twenty years had passed since we had last seen him, erect and virile, scarcely twenty minutes before.

Beside bins at a gray-baired woman, a little bent, a little writked, but still strong and alert. Her face was as cool and cruel as that of the aged wreck on the couch. But it was, nevertheless, the face of Olarzh, the singer—Olands stadledly grown old and coheting benchmark and the state of the state dentity benchmark and the state of black magic were not the litteni truth.

"Food! Food! Olanda, give me food! Will you starve your old father to death?" quavered the sick man.

"I will," answered the harsh, cold voice of the metamorphosed Olanda. "You get no food till you tell me where you have hidden the treasure. This is the last time I'll ask you. Tell me now or I'll leave you to die."

,"I give up," he gasped. "Lean close, or your sons may hear."

She bent over him, while he whispered something

we could not catch. Then she arose and sped from the room, not seeming to hear the feeble cry from the couch of "Food! Food!"

In the next room four people awaited her eagerly, One, Hendriga, now an old man, still erect and sturdy, ugly, malignant, avaricious as ever. The others were man in early middle life, fune of form and regular of features, but in the complexion of each a faint touch of green hue and in their comtanances a precioninant expression of critel avarice.

They were young dandles in dress, tunics, trousers, and sandals new and belecked with glittering gens. About the head of each was a circlet of gold, each bearing over the forthead a single great gen, one a diamond, one a ruby, and one an emeral. So closely did they resemble each other that they could be distinguished only by these gens.

Olanda looked at her husband, then at the younger men.

"My sons," she said haughtily, "leave us. I wish to speak to your father alone."

The three young men glanced at each other questioningly and nodded with secret understanding. He of the diamond circlet acted as spokesman,

"No" he said firmly, addressing his father, "We can no longer be ordered about like children. The old man, our grandfather, has told you where he has stored the treasure. That is not a secret for your keeping. The old man's life is done. Let him die. You, too, are old, and could not rule for many years, You have already shown yourselves unfit to rule as we believe this valley should be ruled. The green slaves have field. Our while race, too, has nearly destred ut.

"We have decided to take the rule into our own hands and bring back the old days of prosperity. You will tell us the secret of the tressure. We will take it and use it rightly. Don't deny us. You are but two and old, and one a woman. We are three young, strong men.

"We have already barred the windows. Tell us where the treasure is or we will go out and bar the door, and leave, you here to starve as you have starved our grandfather. We will leave you now for a little time to think it over, and will return for our answer."

As the three unnatural sons strode out of the room, the fuse of the telephonoscope again blew out and left the screen in darkness.

#### CHAPTER XXVII

#### After a Thousand Years

To me it was an intense relief when the breaking down of the instrument gave us another respite from watching this tragic, sordid mirade unfold. I was imp with horror and amazement. Yet, shaken as I was myself, my pity went out to Priestley. He had seen his high ideal dashed down.

"It simply can't be! It's absurd, utterly impossible! And yet \_\_\_\_\_ Tell me, Blair, what did you see? I wonder if I've been dreaming."

I shook myself together and considered my answer. "I saw, or seemed to see," I replied finally, "a generation pass in less than an hour, fity years of, time roll away in a flash, characters changed in a twinkling from fresh, youthful innocence to sordid age, through the evil influence of a perverted hast for material wealth."

"Did you see that, too, Professor Fleckner?" Priestley asked.

Fleckner looked at me searchingly. I think my reference to the degeneration of character stung him a little.

"I seemed to," he admitted. "Or else I was looking upon some equally mysterious picture prophecy of events to be, or perhaps what some hidden prophet believes they will be."

"Then we have all been hypnotized !" Priestley exclaimed. "I wonder if Olanda ever existed or if she was merely a dream picture of some one's imagining?"

"The answer to that is our complete cinema and phonograph records," the professor reminded him. "You can't hypnotize a wax disk or a celluloid film."

As if to verify his own faith, he tried several of the familiar records, one or two of them reproducing the scenes in which time had apparently slipped a cog.

"There is no doubt that the picturies we thought we we saw on the screen and the sounds we thought we heard, we really did see and hear. I'm beginning to wonder, however, if we have no heaen the victims of some colosal hear, though what it may be I can't imagine. Depend upon it, nevertheless, miracks don't happen. This thing has a natural explanation, and I'm going to find it."

"Why not consult Miss Stimson?" I asked, suddenly remembering the elever young woman who was supposedly listening in and watching over her auxiliary telephonoscope. "Peminine intuition, coupled with a brain as elever as hers might have some good suggestions to offer."

"Thank you, Mr. Blair, I heard that," came her voke from the screen. "L have seen and heard the same things as you gentlemen, apparently. Perhaps explanation. Perhaps we've been simply booking at a motion-pieture show. No, I'run not jokking. Same one in the erime trust may have learned of the telephononcope, and with the ald of a elserer actentist, bid your telphonoscope, ray.

"Then they may have conceived the idea of getting up this fantastic film picture with the idea of baffling and bewikkering you. They could put it on a screen in front of your ray and get the effect, couldn't they?"

"They could, my dear young lady," Fleckner agreed, "but they didn't. Fleckner and diamonds would not respond to the spectrum test. That cave of gold is real, as I proved when we first saw it."

"That might be," she persisted, "and at the same time they could stage a picture play there, couldn't they?"

"Well," Picekner agreed, "improbable as your suggettion seems, at least it has a scientific basis and isn't as abaurd as the jumping ahead fifty years in time bat we seemed to soc. The try instrument going again and try to test that theory out a little. The horping The balle to get a second ray in operation and work it independently of the first. Then 1 can locate our picture again, and, by paleng the second ray around it, discover if there are any sngetraphings or other thickery."

#### TREASURES OF TANTALUS

IT was setting an lower this time before the intrament was again work, for use. For the intraseveral readjustments. Finally is turned in the ray and disclored once more the displayshed golden palace as we had seen it last. There had been no great sign in the passage of time since our last view, for in the big studie-up room where their ematterial sons had half-treed husband.

Nevertheless, more time seemed to have elapsed in the picture story than the clock on our laboratory wall showed, for the old couple had the appearance of having starved for several days. They were weak and emaciated. The arrogance had gone from their countenances.

"I can stand it no longer," Olanda whispered. "When our sons return again we must tell them the hiding-place of the treasure and ber for food."

"Yes, I suppose we must-curse them!" Hendriga muttered feebly.

Flockner had been adjusting his reflection-spectrum analyzer and testing the materials reflected in the picture.

"See!" he exclaimed. "Those materials are real gold and precious stones and actual human fiesh. If we were looking at photographs reflected on a screen at the other end the analyzer would show nothing but the material in the canvas of their screen.

"We'll check it another way now if I can work the rotater of the ray end after that last readjustment. We'll be able to look in turn at all sides of the bodies in the picture and determine if they are solid or merely flat reflections."

He tried the rotation control, and this time the ray responded perfectly. The room and the two wretched occupants slowly revolved on the screen, showing the scene from every angle.

"No doubt of it!" Fleckner poncluded. "We're looking at a real spectacle containing real people." "But." protested the voice of Miss Stimson from

"But," protested the voice of Miss Stimson from the other apartment, "it may be play-acting for our benefit, nevertheless."

"Well," said Fleckner, "let's try a second ray on the outside of the house."

He turned on a second ray, and, as he had hoped, it worked independently of the first. Keeping the interior on one end of the screen, we showed the outside of the house on another section.

But now another anaxing change had taken place. Inside of the houses seen by the first ray was still the period of Madga's death and Olandi's and Hendirgs's old age, and their sons' middle age. Outside the house was the state in which we had seen it that day when we had found Olandi, and her hushand, day when we had found Olandi, and her hushand. There was even the single old green-buck size guarding the half-booken acts.

While we were wondering at this, we were struck with new amazement. Around the corner of the house came the middle-aged Olanda, her three little boys playing around her.

By now our capacity for experiencing the emotion of amazement had been overstrained. We gazed dully at the parallel pictures of the sturdy, matronly Olanda without, and the aged, emaciated Olanda within.

Even as we looked, there entered into the picture of the interior of the room, by way of our first ray, the three grown-up sons to make final demand for

revelation of the secret from their aged parents, and at the same time outside of the house, seen over the second ray, were those same sons, innocent children' playing around their mother's robe.

In this strange underground world it would seem that time did not merely leap forward with lightning speed, but in some places leaped lack again. But Professor Fleckner had suddenly lost his late bewilderment. He was manipalating his levers with an intent eagerness. I knew the old scientist was on the trail of a clue to this puzzle.

"I'm going to swing in a third ray," he muttered half to himself.

At once another section of the great cave valley appeared seen through the third ray on the other end of the screen. And here time had slipped back still another notch. The valley, once more sprace, trim, and prosperous, was teening with the life we had first seen there.

Fleckner shifted this first ray about till he located the little ravine where we had first seen Olanda. Again our ears were enchanted by that marvelous song, and again we saw her in the beauty of her fresh maidenhood, and, beside her, her murdered lower returned to life.

At this Priestley leaped to bis feet, his face aglow with incredulous joy. I think for the moment he was half mad. He seemed to have forgotten our presence.

"Olanda! Olanda!" he cried.' "I knew I'd see you again. The rest has been a had dream!" He recovered himself immediately. "Let me handle that third ray," he pleaded. "I—I want to watch her a little."

"Go as far as, you like, my boy," Fleckner conceded, "I think by increasing the strength of that ray you can follow the lady right back to her infancy if you wish. For I'm sure I've solved the riddle."

But this was lost to Priestley, who was raptly watching the picture of his Lady of Tantalus living her life over again.

I watched the professor with intense curiosity while be set down elaborate calculations on his deskpad, stopping now and then to make readings of ray directions and strength on bis instrument dials.

At length he looked up and regarded Priestley curiously, a touch of pity in his hard, old face.

"I've got it," he said quiety. "Our cave of Tantaba and its treasure and its people are not on our earth at all, heut on a distant phanet so far away that it takes its light a thousand years to reach us. Priestley, my boy, Tm sorry. Your Olanda was very real opce, but she lived her life and died a thousand years ago."

#### CHAPTER XXVIII

#### Fleckner Dethroned

IKE everything else, it's very simple when you understand it," the professor went on,

while we stared at him stupidly, unable to grasp his astounding statement. "I wouldn't have been deceived so long if I had kept track of the direction our rays were turned after I got the control apparatus restored.

"You see, the first time I got the direction of our ray and found it pointing straight down, I jumped to the conclusion that our Tantalus land was in the bowels of the earth directly underneath us. That idea seemed to be confirmed hy our finding that land to be located in a great cave. I was so absorbed in our treasure hunt that it didn't occur to me to test the ray direction again until a few minutes ago, Then I found it pointing straight up.

"I knew at once that our cave of Tantalus was on mother heavenly hody than ours? Our earth had of course swung around in its orbit and revolved on its axis, and the direction, naturally, was changing constantly.

"In a flash the whole explanation of the apparently mifaculous shifting back and forth of time came to me. I was right in helieving that a general electrical current had caught and held our feehler ether ray out of control. But instead of a mere carth current it was a great interstellar torrent of electrical energy.

"Now, the ether wave motion that carries light, electricity, and other radio manifestations, as every student of physics knows, travels at the rate of one hundred and eighty-six thousand miles a second. That is practically instantaneous, for all ordinary distances, hut distances hetween stars are another matter. Some stars are so far away that it takes centuries for light to reach us from them

"Such a star is this one on which our cave is located. By certain computations based on the known power of my various rays and the lapses in time between the visions they showed, I have found that sights and sounds that started over the ether waves from this star-Tantalus we'll call it-a thousand years ago would just be reaching us now, a thousand years after they happened.

"Well, our rays from the telephonoscope, which is variable in speed according to its intensity, shot out into space against this current only a comparatively short distance at first, perhaps twenty light years. In other words, it picked up the scenes and sounds from Tantalus only a little before the ether waves bearing them would naturally reach the earth. Our ray with its vastly greater speed transferred those scenes to our screen practically instantly. They happened to be the scenes of Olanda's youth

"Then I doubled the power of our ray, and it shot out twenty light years farther and gathered scenes coming over the ether waves twenty years later, all in an instant. Again I increased its speed another twenty light years, and in an instant we saw Olanda as an old woman.

"Just now we set three rays of three different lengths and speeds at work. As a result we saw the same general locality in Tantalus in three different periods at once.

"But now I must readjust the rays to still higher speed and watch Olanda's sons claim the grandfather's wealth. I must find out what is that mysterious Treasure of Tantalus that is so much more precious than gold and jewels. It may give us a hint of something valuable on our earth that we have overlooked. I want to see, too, what success those three young men had in rehabilitating their valley."

Thus while Priestley and I sat, still overwhelmed hy this stupendous revelation of vast spaces and the solemn moral lesson that had been borne to us over the bridge of a thousand dead years, the old scientist smissed the marvel with a contemptuous wave of the hand and set out again on the trail of his sordid curiosity. He fell to work at the adjusting of his in-, as I can. I'm the victim of a conspiracy, that's all.

strument, at first with methodical precision; hut I noticed presently that his hands trembled and that he was laboring under suppressed excitement.

The work didn't proceed smoothly. He made little mechanical slips more and more frequently, and had to undo and repeat parts of his work. He would fiv into a rare each time this happened. I fell to studying his face. I noted for the first time how haggard and deathly pale he had become from weeks of neglect of sleep and proper food, during which his brain had been continually afire with his mad obsession.

At length he threw on the power of the ray section he had been working on, and it failed to work at all. He had forgotten to replace a perfectly simple connection of one of the main cables.

At that he flew into a still more violent rage. He thrashed about the laboratory, waving his arms in the air and snarling inarticulately like a maddened animal." Priestley, John, and I leaped to our feet and stood back in alarm. The man was evidently mad.

Suddenly he stopped short in the middle of the floor and clasped his head tensely between his hands,

"My mind has failed me!" he shricked. "I can't find the treasure! The sons of Olanda will hide it from me ! I can't-

He swayed, and before any of us could catch him, he fell forward on his face and lay there, deathly quiet.

ENTLY we raised the gaunt figure, now so completely powerless, and laid him on the bed in his own room. He was hreathing heavily, but was unconscious.

In this emergency, Priestley became the embodiment of cool, masterful efficiency. He despatched John to the drug-closet for a stimulant and admin-istered it. The professor revived partially under its influence and began muttering incoherently.

"Go and release Miss Stimson, John," Priestley directed next. "We need an emergency nurse at once, and only a woman will answer. You stay in the room here with her to help in case he gets violent.

"Now we must get a doctor in immediately. We've got to throw secrecy to the wind, and hefore the doctor arrives, we've got to get up a plausible story to account for things. I'll start off by calling a doctor and giving him a yarn.

At this moment Miss Stimson returned with John. I could not see clearly what effect her long confinement and intense excitement had on that remarkable young woman, for her face was, as usual, partly obscured by the green eve-shade. I felt a wave of tenderness and embarrassment pass over me when I saw her once more, but my heart sank again with the old hopelessness when I perceived that she scarcely noticed me, but was shyly studying Priestley's alert face.

But he was already calling up Dr. Arthur Thorndyke, who, he learned from the girl, was Fleckner's physician. We waited with breathless interest, to hear what explanation he would give the doctor

"Dr. Thorndyke," he said when he reached the hysician, "this is Thomas Priestley-ycs, Thomas Priestley, the very same, the man who's wanted hy the district attorney. What's that ?- Oh, don't let that worry you. I'm going to give myself up as soon I'll clear myself easily enough. it's a long story, and I'll tell you all about it later. This is professional confidence now.

"Tree been kept prisoner by the conspirators who've been using Professor Ruttar Fleckner's apartment as a rendervous and prison for me ever since the professor went to South America on his trp. They waylaid the professor in Chile and kidanged him, too. He excaped and goot tack last night by airplane. The bunch here fled when they found he'd escaped.

"Now we want you up here at once, please. Professor Fleckner's experience knocked him out. He collapsed a few minutes ago. He's unconscious and in a critical condition. You'll be right np? Thank you.

"Now," he said, as soon as he'd hung up, "get James and John and the cook in here, and we'll frame up our story. Well," he went on, when we were all present, "it's obvious we can't reveal the true story of the crime trust. That would create worse world-wide panic even than already exists.

"Consequently we can't give Fleckner's performances away, even if we wanted to. We don't want to. If he dies, there's no use in disgracing the memory of a great sclentist whose mind temporarily went wrong. If he lives we'll need him to help undo the harm he has done.

"Now our story, I suggest, should be this: We'll admit the existence of a band of criminals, but we'll profess to know nothing of their identity. We'll give no hint that any prominent persons were involved. We'll allege that they learned of Professor Fleckner's invention, the telephonoscope, and wanted to make use of it. They had to get everybody out of the way who knew about it., They learned that the professor and Blair, here, were starting for South America, so that automatically disposed of them. They hatched up a charge against me to make my disappearance plausible, and then kidnaped Miss Stimson and me out from under the nose of the law and hid us here after Fleckner went. Then they meantime captured the twelve other centlemen who knew the secret.

"When the criminals' representatives, sent to South America to keep track of the professor, learned he was about to return they kichnaped him and Bair. They escaped and returned bere last night by airplane, entering, by the rocio of course, and surprising the gang here, who promptly field. "That makes it possible to give out the secret of

"That makes it possible to give out the secret of the telephonocope and explain in a measure the mischief it has wrought, but put the blane on an unknown person. We have several tangled situations to unravel and several mysteries to solve. We must more with extreme caution, and, J'm afraid, practise some justifiable deception, or we will do more harm than good.

"First, the telephonoscope itself. What shall we do with it? We've seen the terrible results of this? power to invade privacy. Shall we force Fleckner to destroy it and let his secret die with him?

"Then what shall we do with the crime trust 1 ff we expose it and its entire personnel we'll smite very community in the country with tragely and disgrace. We'll fill the world with even greater distrust than at present. We must find some way to stop its evil activities without creating a revolution in the present social organization by exposing it. "We must restore the plunder of the trust. We have three mysteries to solve there: Was there a mam higher up than Chandler? Where is the server plunder of the old trust? Where is the plunder that Fleckner gathered?

"Then there is the problem of retiring the immense amount of counterfeit money in the country without causing further financial panic.

"Now, in order that I may be free to help solve these mysteries and the problems involved, I'm going to give myself up to the district attorney at once, get released on bail, and have my trial put off until Fleckner is well enough to testify, in case he lives and his reason is restored.

"Now the doctor will be here at any moment. Is our story all straight? Are there any other problems we haven't thought of ?"

I looked at Miss Stimson at that moment, and again caught her shy glance toward Priestley. I thought then there was a serious heart problem that promised to be the most difficult of all in the solving.

#### CHAPTER XXIX

#### **Priestley Heads the Crime Trust**

 $O_{i}^{2}$  fail the lurit lates that M filled the paper size the beginning of Professor Flockner's station than these which followed his approximately built ruttment to my own paper that alternoon, and had the great glory and poor statisfaction of writing the first stary. The fact that I'vas society the high set in any own mind by the knowledge that for the set in my own mind by the knowledge that for the "false." I assure the reader that the writing of this "false." I assure the reader that the writing of this relief to my conjection.

After oullining briefly in my introduction the story Priestley had suggested, I told how our party, after being kidnaped in the Andes by supposed Chilean laundix, had discovered that our captors were New York gangters, whose names, however, we had not learned. We had escaped in a running fight during which we had killed the leaders of the gang.

We had returned the whole distance to New York by plane and surprised another section of the gang in Fleckner's apartments. They had been so taken by surprise that they had fled.

Then followed a description of Professor Fleckner's great invention, the telephonoscope. All the mysterious invasions of the world's privacy in recent months were attributed to the unauthorized use of that instrument by the gang while occupying his apartment in his absence.

I told of the capture of Priestley, Ruth Stimson, and the twelve men who knew of the telephonoscope. All these prisoners, I went on to relate, had been found in the Fleckner group of apartments and released. The twelve capitalists had been key drugged and could tell nothing of how they got there or what happened.

Dr. Thorndyke was quoted as having found Professor Fleckner suffering from a complete nervous collapse and temporary insanity. The doctor, however, predicted his gradual recovery.

The rest of the story hinged on Priestley. The afternoon following Dr. Thorndyke's visit, he had

called at the district attorney's office and given himself up. He had been arraigned, pleaded not guilty, and released on beavy hail to be tried when Fleckner was able to testify.

To the district attorney. Priestey confided that he and Miss Stimon had overheard some things which led him to believe that, given time, he would be able to make certain that the criminal hand had been broken up and possibly restore much of the loot of the recent epidemic of thieving, as he believed most of it had been accomplished by that gang.

Priestley promised to bring this about hy organizing a secret detective corps and following up the clues he had picked up while a prisoner of the gang. He pledged half of his fortune, if need be, to the task.

The district attorney, at Priestley's request, assigned Assistant District Attorney Winter, secret member of the Upper Council of Three of the crime trust, to assist Priestley in this work.

The conversation that took place a little later between Priestley and that crime trust representative in the latter's private office in the Criminal Courts Building was a memorable one to both of them.

"Mr, "Winter," Priestley said when they were alone, "for your own good, much more than mine, I warn you before I begin that there must be no record made of this conversation and no eavesdropping. So you will kindly disconnect your dictograph." They sat looking each other hard in the eyes for

They sat looking each other hard in the eyes for a moment. What Winter saw in the face of his vis-d-vis taught him discretion. He smiled a little sheepishly, opened a drawer in his desk, and threw off a sceret switch.

"Now do you feel better?" be asked with a forced attempt at gaiety.

"No, not exactly," Priestley replied evenly, "but in a minute you will feel not quite so badly as you would if you realized that other ears or eyes than yours were going to take in what I'm about to say. Perhaps you'll understand what I mean when I say that I am the head of the crime trust."

"What !" cried Winter leaping to his feet.

He was too surprised and alarmed to think of pretending not to understand,

"Sit down and don't get excited, Mr. Winter," Priestley adjured him. "All you have to do is to listen and obey. I'll do the talking. "When I say I am the head of the crime trust I

"When I say I am the head of the crime trust I don't mean that I am the original head. I am a usurper of late date. I have overthrown your secret chief, and lares thin oritify in my power. I know the second second second second second second second complete list, with records of each of each of the second ferences. These might interest you as samples." He laid on the desk before Winter some of the

He laid on the desk before Winter some of the photographs Fleckner had shown Chandler that memorable night when the Professor had taken over the leadership of the crime trust, amitting, of course, the ones in which Chandler himself was portrayed.

With trembling hands Winter turned them over one by one.

"Well," he said at last, "this is rather convincing. I assure you I will give you the same loyal service I gave the old chief, whoever he was. I hope you will overlook the treatment that was given you while you were prisoner. I was not personally responsible for that."

Priestley raised a deprecating hand.

"We'll overlook that," he said. "I've picked you because for many months now I have been studying you over Professor Fleckner's telephonoscope, which you've just heard me describe to the district attorney. I've made up my mind you are the best man to act as my licentemat."

Winter began to regain his poise at this,

"I'm sure I'm glad I have your confidence," he said.

"Now let me explain further," Privately went on. "A complete set of such photographica as this, together with moving pictures of the episodes they are taken from and photographic records of conversations, and also a full list of all trust members with their careers, is in the hands of each one of a little group I'm working with. Also several sets are in asfedeposit under courted of trustes with instructions to open and publish them if anything happens to me or any one of our group.

"So any attempt on the part of the old organization to part new any of my associates out of the way will be automatically punished by cepseure. And if that happens, dog ptry you. The public will never let you get as far as a prion farm. You'd be torn orders will be likevise in microal to carry out my cause well keep you checked up with the telephonescope."

"I understand," Winter replied humbly. "Tell me what you want me to do. I have no choice in the matter."

"There's where I have a surprise for you," Priestley went on. "Front this moment on the crime trues is going to cease being a criminal organization and become a screet association for the enforcement of hav and recovery of stolen property, organized by myzelf and my soscietas, sa far as a the general public will know, and cooperating with the New York Courty District Attorney's office through you. A single criminal act by any nember bereafter will mon instant expourse of his past record."

Winter leaped to his feet, his face alight with incredulous joy.

"Do you mean that, Mr. Priestley? I can't tell you how glad I am to hear it. I'm sure a lot of the rest of us will feel the same way. We made one little slip once and attracted the attention of the organization. We got caught in the net and couldn't escape."

The glid to beer you say that," Privately register benefity. "Now if you toy not to gas the word along word pair. We have all been receiving a share of the erime true private. You have all been receiving a share of the erime true private. So the machinery of the ergenization the erime true private. The radical element of the public, however, were load in criticism of this blind following of an indicted man. Some radical papers even, hinted that Prietley had guilly knowledge of the original thefta. To the day of his dash, my old friend suffered from this suspicion but refused to let me write the truth in his vindication as long as he or the other principals in this secret episode were aliye.

#### CHAPTER XXX

#### Treasures Revealed

B<sup>UT</sup> all this time the mystery that had baffled us so long, the puzzle that had unseated Fleckner's reason, remained as much a mystery as ever. We were no nearer than ever to locating the hidden wealth of the crime trust. For that matter the second collection of loot gathered and hidden by Fleckner himself, during the months of his régime, proved as elusive.

Our earthly Treasures of Tantalus were still as much out of our reach as that mysterious treasure of the star Tantalus a thousand light years away.

Between us and those great stores of hidden wealth were the disordered minds of two sick men, Chandler and Fleckner.

For the ex-President-elect was still pitifully weak, though convalescing, and common humanity forbade our applying threats to him in the hope of getting a clue to the funds of his old organization.

As for Professor Fleckner, he had occasional lucid intervals, as he gradually grew stronger in hody, but all inquiry regarding his servet as tsuch hims threw him into a fury which resulted in a relapse into irrationality. So kith Stimson, who continued to care for him as tenderly as though he were her father, inally forbade our troubling bim further.

The old man grew very fond of her and never wanted her out of his sight. One night, after he had been restless and almost violent at times, he settled down at last for a fitful sleep, muttering deliriously now and then.

"Ruth ! Ruth !" he whispered suddenly, half rous-

She bent over him solicitously.

"Yes. What is it ?"

"I can't keep it from you any longer. You've been so good to me. It's under the old mill race near where the treasure van was lost that time. It's all yours."

Then he fell into the first natural sleep he had enjoyed since his attack.

The reader will recall that Fleckner's two men, John and Janes, had, according to his statement when he first boasted to us of his stating of the treasure ran, assisted in hiding that loot. Alterwards he had evidently arranged with another agent by way of the telephonoscop. But John and James had departed for parts unknown the moment the Professor collapsed that tak, so we got no chance to quit them.

However, they did not seem to have dared touch any of the treasure, for Priestley's agents found it intact where Fleckner in his delirium indicated, and it was presently back in its home wants.

That left the big mystery of the original treasure to solve. There was also the problem of what should be the future of the telephonoscope, which had provén itself such a dangerous implement. Professor Fleckner was convalescing now. He had never been irrational again since he unconsciously gave away his secret. He was still confined to his bed and was gentle and affectionate with Ruth Stimson but cold and uncommunicative toward us. He was evidently unrepentant. He did not know yet that his treasure had been restored to its owners and he still discussed his schemes with Miss Stimson for finding the crime trust loot, alternating this with speculation as to what was finally accomplished by the three sons of Olanda on Tantalus, the star, and what their mysterious treasure really was.

It was a serious problem, then, as to what would happen if the unrepentant Fleckner continued to use his invention against the privacy of the world. There was no law to prevent his so using it if he chose, though now that his invention was known, he could no longer employ it for criminal purposes. On the other hand, if he turned it over to general use, what mischief might not be done with it by an irrespon-

We were discussing these vexatious problems in the laboratory one evening, Priestley, Ruth Stimson and I. It had been a light day on the paper and I was off early. Professor Fleckner was asleen and Ruth had tiptoed out of his room and joined us.

Priestley had turned the telephonoscope on Chandler's home earlier in the evening and found him much improved in health. He was alone in the house with two nurses and his servants. It was generally known that relations between him and his family had become strained since his breakdown had lost him his political honors. Mrs. Chandler was a cold, selfish woman and their children shared her disposition

Priestley was inclined to regard this as just retribution for his sins, but Ruth was warmly sympathetic. I recalled her strange visit to Chandler's home that time when she had procured Priestley's release by impersonating the President-elect. I also remembered the night when she warned Chandler away from the van when we were about to trace him to his treasure-trove. I wondered what had been her relations to the Chandler bousebold and again recalled my vague suspicion that she might once have been a member of the crime trust herself.

Priestley was arguing that now was the time to appear before Chandler and compel him to give up the secret of the treasure, or, if he was telling the truth about a man still higher up, to force from him some clue by which we might locate that person.

"No !" Ruth demurred vehemently. "It isn't the best way to force people to do right. Better to persuade them. My woman's intuition tells me that there is no man higher up, that he really knows where the treasure is and would like to get it off his soul. I'm going to try it."

Wonderingly we watched her go to the telephonoscope board and throw on one of the lesser rays that had not been tuned up for the long distance work on the star Tantalus. She found Chandler's house and in a moment she revealed him asleep in his bedroom

Then she threw on the projector and stood in front of it. It was dark in his room, but as you know, our rays were independent of light that the eye can see. "Are you awake?" she asked gently.

The man in the bed miles away opened his eyes and stared unseeing into the darkness, "Who's there?" he cried out.

"It is I. Don't be alarmed. 1 want to talk to ou," she replied.

"Agnes !" he exclaimed hoarsely. "Where are you? Am I asleep? Oh, I've wanted you so much lately since they've left me alone. Oh, I loved you after all. Have you forgiven me at last and come back? It can't be! I'm dreaming!"

"No, you are not dreaming," the girl answered with a little catch in her voice. "But I'm not Agnes, Agues has been dead ten long years. I'm Agues's daughter and your daughter, Ruth."

Priestley and I started violently and stared at her in amazement

"You are Ruth? Agnes is dead?" the sick man was saying. "How did you get in? Where have you been all these years? Turn the light on so I can see you! You were a little thing a year old when I left your mother. Turn the light on so I can see you."

"No," she answered. "You can't have a light now. The nurse has forbidden it. You can see me in the morning, if you tell me what I want to know,

"What .ust I tell you?" he asked tensely.

"That you are sorry for the wrong you've done in the world and are ready to give back the money you stole

"You know about that !" he gasped.

"Everything," she said, "except where the money I want to help you give it back."

He was silent for a long time.

"Will you tell me?" she prompted.

"I can't give it back," he answered at length, "but I can tell you where it is. It is at the bottom of the deepest part of the Pacific Ocean, ten miles below the surface

Again Priestley and I gasped.

I never wanted the money," the sick man explained. "I wanted only the power, I didn't dare use the money or let any one else use it for fear it would be traced. So I invented a counterfeiting scheme to pay my followers. Then I was afraid to hide the money anywhere for fear it would be found. I had to keep ordering robberies to satisfy my followers, but the money worried me. So I took it each time in a big scaplane, flew out over the ocean and dumped it where it would never betray me. That's all. I find I'm very weak still. I can't talk any more."

"I'll come to you in the morning," she promised and threw off the ray. She was weeping when she turned on us

"Now you know my secret," she said, without waiting for our questions. "He divorced my mother when I was a baby, to marry this other woman. His marriage to mother was a secret one. She wasn't in society and he grew ashamed of her. But she con-tinued to love him. When I was a little girl she used to bring me secretly to his house and leave me with his housekeeper so I could see my father. I came to love him, wicked as I knew he was. I'm going to him in the morning. He needs me. I'm going to my room now. I want to cry alone."

She hurried out, tears streaming from under the green eveshade.

Not till that moment did we see Professor Fleckner. He stood in his bedroom door, a gaunt figure

in a flowing bathrobe. He was smiling sardonically. "So," he said, "the Tressure of Tantalus has been located under ten miles of sea-water!

Evidently he had been standing and listening for some time. We made no answer, "Well," he went on, "it's a pity to lose all that

money. Chandler was an awful fool, But there's more where that came from.

"Meanwhile, I'm going to satisfy my curiosity as to that other mysterious treasure that made so much trouble on our star, Tantalus a thousand years ago. I'm feeling pretty fit to-night. I've thought up a way of giving that No. 1 ray a little more speed. I'm going to have another look at Tantalus. I recalled a little while ago where old Olanda told her enterprising sons to look for their treasure. You two were so busy at the moment watching the young Olanda that you missed it."

He made a rapid adjustment of the instrument and flashed on the ray., It was still under control of the interstellar current and instantly the great cave on Tantalus was on our screen once more.

But now it was a scene of absolute desolation. Not a sign of human life. The houses were broken, empty wrecks.

Fleckner was a little taken aback at this,

"I expected to see the valley flourishing again," he said.

He drove the ray along the river to the great ravine and up to a point where he picked out back of some bushes the low entrance to a cave.

"Here's where she told me to look," he said, sending his ray into the opening.

A little way in, the passage opened into a cave of considerable size.

Near together in the center of the cave, lay three skeletons. Their torn robes and the heavy gold clubs told the story of a death battle long ago. A band of gold, jewel-studded, around the crown of each grinning skull identified the remains of the three sons of Olanda.

A little apart from the other two lay the skeleton crowned with the diamond-studded band, once the oldest and strongest of the three sons of Olanda. He lay with his arms thrust into a little pile of rusty muggets, the mysterious treasure-trove at last.

Professor Fleckner turned on his analyzer, did a little figuring on a pad and without a word aboved us the result. It was the climax of absurdity in the midst of this scene of tragic desolation.

The . Treasure of Tantalus was ordinary everyday iron ore!

Fleckner left his gruesome picture on the screen and fell to pacing the floor with slow, rather uncertain steps. At length he stopped and gazed at us intently.

He pointed a bony finger at the cave of death.

"I'm going to give the idelphonoscope to the world and retire. I've just discovered something out there in Tantalus that will make it safe. People can defend their privacy as well as ever. See that gray spot on the opposite wall of the cave about a foot wide? I flashed the ray into that wall while I was adjusting the ray on the interior of the cave. The ray pierced

the wall all arrond that spot but wouldn't go through the state is the same star spot of the same space of a state same inside the point and the same space of the space of the space formula in the morning for a ray-proof-paint and you looy can manufacture it along with the tolephonoscope. If the cheap, thereholds can paint where both is the space state of the space of the space of the space space of the space of the space where both is to give an it receives a paint and where both is to give an it receives a paint and messages. So we'll all be happy and private again.

"I'm all in! Good night."

At that the amazing old inventor staggered off to bed.

Priestley and I sat for a time in thoughtful silénce. At length he arose hesitantly and approached the screen. He stood and stared for a time at the gruesome picture.

"So that's the end of the story of the Treasure of Tantalus" he said at last. "I wonder if I couldr' throw the ray power back far enough to see Olanda again and hear her sing once more, before we leave her to rest in her thousand-year-old grave."

He turned to the control-board and swuing the ray out of the eave and down the valley to the little dell where we had first seen the singer of Tantalus. But before he could readjust the ray power to throw time back again to the days of Olanda's youth, there was a flash and another girl figure appeared on the screen apparently in the very spot where we had first seen Olanda.

But it was not Olanda. It was one to me far more alluring at that moment han Olanda had ever been. She wore a modern American dress. Her figure was alender and straight, her face was not too perfectly owal, but fine, sweet and sincere. Over it was a mass of wavy brown hair. And above all else was the glory of her eves.

And dangling from one capable little hand was a big green eyeshade. We both stared at her for a moment before I saw

We both stared at her for a moment before I saw that Priestley still failed to recognize her.

"It's Ruth!" I exclaimed. "She's thrown her image on the screen from the little telephonoscope in her room."

"Ruth!" he exclaimed. "Why, Ruth! I don't believe I ever really saw your face before!"

She was looking into his with a light in her eyes that shines for only one man in the world. And from where I stood I could catch a little of the expression of his.

I turned and tiptoed out of the room with an ache in my heart that wasn't entirely cured until I met the lady who is sitting placidly beside me at this moment, while I write these lines.

For I knew when I saw the answering light in Priestley's eyes that he had found his Treasure of Tantalus at last,

. . . I was conscious of being scooped up and drawn forward with inconcivable speed. For one breathless moment I hang suspended, : .

#### THE MACHINE MAN OF ARDATHIA

DO not know what to believe. Sometimes I am positive I dreamed it all. But then there is the matter of the heavy rocker. That undenlably did disappear. Perhaps someone played a trick on me,

But who would stoop to a deception so bizarre. merely for the purpose of befuddling the wits of an old man? Perhaps someone stole the rocker. But why should anyone steal the rocker? It was, it is true, a sturdy piece of furniture, but hardly valuable enough to excite the cupidity of a thief. Besides the rocker was in its place when I sat down in the easy-chair. Of course, I may be lying,

Peters, to whom I was misguided enough to tell everything on the night of its occurrence, wrote the story for his paper, and the editor of "The Chieftain" says as much in his editorial of the 15th, when he remarks, that "Mr. Matthews seems to be the possessor of an imagination equal that of an H. G. Wells." And, considering the nature of my story, I am quite ready to forgive bim for doubting my veracity.

However, the Jew friends who know me better think that I had dined a little too wisely or too well, and had been visited with a nightmare,

Hodge suggested that the Jap who cleans my rooms had, for some reason, removed the rocker from its place, and that I merely took its presence for granted when I sat down. The Jap strenuously denies having done so.

I must pause a minute here to explain that I have two rooms and a bath oo the third floor of a modern apartment house fronting the Lake. Since my wife's death three years ago I have lived thus, taking my breakfast and lunch at a restaurant, generally taking my dinners at the club. I may as well confess that I have a room rented in a down-town office huilding where I spend a few hours every day to work on my book, which is designed to be a critical analysis of the fallacies inherent in the Marxian theory of economics embracing at the same time a thorough refuta-tion of Lewis Morgan's "Ancient Society." A rather ambitious undertaking, you will admit, and one not apt to engage the interest of a person giveo to inventing wild yarns for the purpose of anazing his friends, No; I emphatically deny having invented

the story. However, the future will talk for itself. I will merely proceed to put the details of my strange experience on paper, (justice to myself demands that I should do so, so many garbled accounts have appeared in the press), and leave the reader to draw his own conclusions.

HERE ERE is an astanding fourth-dimensional story, every bit as good as any that we have read in years, What will humanity look like 30,000 years kence? what will humanly low one source source of the time the Egyptians or Romans, we have traveled to our present stage of development in the space of some 2000 years, how high will the human have ascended in 30,000 years? Our new author has written excellent science into to grip you.

CONTRARY to my usual channel. In the Hotel Oaks. ONTRARY to my usual custom I had dined among his intimates that Hodge carries a flask on his hip, I had absolutely nothing of an intoxicating nature to drink. Hodge will verify this. About eightthirty I refused an invitation to attend the theatre with him and went to my rooms. There I changed into smoking-jacket and slippers and lit a mild Havana. The rocking-chair was occupying its accustomed place near the center of the sitting-room

floor. I remember that clearly because, as usual, I bad either to push it aside or step around it, wondering for the thousandth time as I did so why that idiotic Jap persisted in placing it in such an inconvenient spot; and resolving, also for the thousandth time, to speak to him about it. With a note-book and pencil placed on the stand beside me, also a copy of Frederick Engels' "Origin of The Family, Private Property and The State," I turned on the light in my green-shaded reading lamp, switched off all others, and sank with a sigh of relief into the easychair. It was my intention to make a few notes from Engels' work relative to plural marriages, showing that he contradicted certain conclusions of Morgan's when he said . . . But there; it is sufficient to state that after a few minutes' work I leaned back in my chair and closed my eyes. I did not doze ; I am positive of that. My mind was actively engaged in trying to piece together a sentence that would clearly express my thought.

I can best describe what happened then by saying there was an explosion. It wasn't that exactly; but at the time it seemed to me there must have been an explosion. A blinding flash of light registered with appalling vividness through the closed lids on the retina of my eyes. My first thought was that someone had dynamited the building ; my second, that the electric fuses had blown out. It was some time before I could see clearly. When I could . .

"Good Lord," I whispered weakly, "what's that !" Occupying the space where the rocking-chair had stood (though I did not notice its absence at the time) was a cylinder of what appeared to be glass standing, I should judge, about five feet high Encased in this cylinder seemed to be a caricature of a man-or a child. I say caricature because, while the cylinder was all of five feet in height, the being inside of it was hardly three. You can imagine my amazement while I stared at this apparitioo. After awhile I got up and switched on all the lights to better observe it.

You may be wondering why I did not try to call someone in. I can only say that thought never occurred to me. In spite of my age (I am sixty) my nerves are steady and I am not easily frightened. I walked very carefully around the cylinder and

viewed the creature inside from all angles. It was sustained in the center of the cylinder, midway between top and hottom, by what appeared to be an intricate arrangement of glass and metal tubes These tubes seemed to run at places into the body, and I noticed some sort of dark fluid circulating

through the glass tubes. The head was very large and hairless; it had bulging brows, and no ears. The eyes were large, winkless; the nose well defined; but the lower part of the face and mouth ran into the small round body with no sign of a chin. Its legs hung down, skinny, flabby; and the arms were more like short tentacles reaching down from where the head and body came together. The thing was, of course, naked. I drew the easy-chair up to the cylinder and sat down facing it. Several times I stretched out my hand in an effort to touch its surface, but some force prevented my fingers from making the contact; which was very curious. Also, I could detect no movement of the body or limbs of the weird thing inside the glass.

"What I'd like to know," I muttered, "is what you are, where you came from, are you alive, and am I dreaming or am I awake?"

For the first time the creature came to life. One of its tentacle-like hands, holding a metal tube, darted to its mouth. From the tube shot a white streak, which fastened itself to the cylinder.

"Ah," came a clear, metallic voice, "English, Primitive, I perceive; probably of the twentieth century."

The words were uttered with an indescribable intonation; much as if a foreigner were speaking our language. Yet more than that ... as if he were speaking a language long dead. I don't know why that thought should have occurred to me then. Perhaps ...

"So you can talk," I exclaimed.

The creature gave a metallic chuckle.

"As you say, I can talk."

"Then tell me what you are."

"I am an Ardatbian. A machine Man of Ardathia. And you . . . Tell me, is that really hair on your head?"

"Yes," I replied.

"And those coverings you wear on your body, are they clothes?"

I answered in the affirmative,

"How odd. Then you really are a Primitive; a Prehistoric Man."

The eyes behind the glass shield regarded me intently.

"A pre-historic man !" I exclaimed. "What do you mean?"

"I mean that you are one of that race of early more whose selections we have doing up here and there and reconstructed for our schools of biology. Marvelous how our scientists have copied you from some fragments of bone! The small bead covered with hair; the beast-like jays; the alnormally large body and legs; the artificial coverings made of cloth ... even your language!"

POR the first time I began to suggest that I was the victim of a bax. I got up on a walked carfully around the cylinder but could deter no canised agency controlling the contrastion. Besides, It was aband to think that anyone world go to all the trouble of constructing such a complicated aparatius as this appeared to be, merely for the sake of a practical loke. Neverthers, I looked out on the handing. I came back and resumed my seat in front of the cylinder.

"Pardon me," I said, "but you referred to me as belonging to a period much more remote than yours."

"That is correct. If I am not mistaken in my calculations, you are thirty thousand years in the past. What date is this?"

"June 5th, 1926," I replied feebly.

The creature went through some contortions, sorted a few mental tubes with its hands, and then announced in its metallic voice;

"Computed in terms of your method of reckoning, I have travelled back through time exactly twenty-eight thousand years, nine months, three weeks, two days, seven hours, and a certain number of minutes and seconds which it is useless for me to enumerate exactly."

It was at this point that I endeavored to make sure I was wide awake and in full possession of my faculties. I got up, selected a fresh eigar from the humidor, struck a light and began puffing away. After a few puffis I laid it beside the one I had been smoking earlier in the evening. I found it there later. Incontestable proof...

I said that I am a man of steady nerves. I am. I sat down in front of the cylinder again determined this time, to find out what I could about the incredible creature within.

"You say you have traveled back through time thousands of years. How is that possible?"

"By verifying time as a fourth dimension and perfecting devices for traveling in it."

"In what manner?"

"I do not know whether T can explain it exactly, in your language, and you are too primitive and unevolved to understand mine. However I shall try. Know then that space is as much a relative thing as time. In itself, aside from its relation to matter, it has no existence. You can neither see nor touch it, we to un more last the see. Is that clear?"

"It sounds like Einstein's theory."

"Einstein?"

"One of our great scientists and mathematicians," I explained.

"So you have scientists and mathematicians? Wonderful! That bears out what Hoomi says. I must remember to tell . . . However, to resume my explanation. Time is apprehended in the same manner as is space-that is in its relation to matter. When you measure space, you do so by letting your measuring rod leap from point to point of matter. Or, in the case of spanning the void, let us say, from the earth to Venus, you start and end with matter. remarking that between lies so many miles of space. But it is clear that you see and touch no space merely spanning the distance between two points of matter with the vision or the measuring rod. You do the same when you compute time with the sun or by means of the clock, which I see hanging on the wall there. Time, then, is no more of an abstraction than is space. If it is possible for man to move freely in space, it is possible for him to move freely in time. We Ardathians are beginning to do so."

"But how?"

"I am afraid your limited intelligence could not grasp what I could tell. You must realize that compared to us you are hardly as much as human. When I look at you, I perceive your body is enormously larger than your head. This means that you are dominated by animal passions and that your mental capacity is not very high."

That this weirdly humorous thing inside a glass cylinder should come to such a conclusion regarding me, made me smile.

"If any of my fellow citizens should see you," I replied, "they would consider you-well, absurd."

"That is because they would judge by the only standard they know-themselves. In Ardathia you would be regarded as bestial. In fact, that is exactly how your reconstructed skeletons are regarded. Tell ne, is it true that you nourish your holes by taking food through your mouths into your stomsche?" "Yes."

"And are at that stage of bodily evolution when

you will eliminate the waste products through the alimentary canal?"

I lowered my head.

"How disgusting."

The unwinking eyes regarded me intently. Then something happened which startled me very much. The creature raised a glass tube to its face. From the end of the tube leaped a purple ray which came through the glass easing and played over the room.

"THERE is no need to be alarmed," said the metallic voice. T was merely viewing your labitat and making some deductions. Correct me if I am wrong, please. You are an English-peaking man of the twentleth century. You and your kind live in cities and houses. You cat, digest, and reproduce your young, much as do the animals from which you have prime. You use crude machings and have an elementary understanding of physics and chemistry. Correct me if I, an wrong, please".

"You are right to a certain extent," I replied, "But I ann ori intersel in having you reline what I ann. I know that. I wish to know what you are. You claim to have come from some thirty thousand years in the future, but you advance no evidence to support the claim. How do I know you are not a trick, a fake, an hallocination of mine. You say you can move freely in time. How is it you are not a trick, a take, an hallocination of mine. You say you can move freely in time. How is it you have never come this way before? Tell me something about yourself : I am curious."

"Your questions are well put," replied the voice, "and I shall seek to answer them. Know then, that I am a Machine Man of Ardathia. It is true we are beginning to move in time as well as in space; but note that I say 'beginning.' Our Time Machines are very crude as yet, and I am the first Ardathian to penetrate the past beyond a period of six thousand years. You must realize that a time traveler runs certain hazards. At any place on the road, he may materialize inside of a solid of some sort. In that case, he is almost certain to be blown up or otherwise destroyed. Such was the constant danger until I perfected my enveloping ray of-----I cannot name or describe it in your tongue, but if you approach me too closely you will feel its resistance. This ray has the effect of disintegrating and dispersing any body of matter inside of which a time traveler may materialize. Perhaps you were aware of a great light when I appeared in your room? I probably took shape within a body of matter and the ray destroved it."

"The rocking-chair!" I exclaimed. "It was standing on the spot you now occupy." "Then it has been reduced to its original atoms.

"Then it has been reduced to its original atoms. This is a wonderful moment for me. My ray has proved an unqualified success for the second time. It not only removes any hindering matter from about the time-traveler but also creates a void within which he is perfectly safe from harm. But to resume.

\*\*This hard to believe that we Ardahinan evolved from such creativers as you. Our written history does not go back to a time when nem normished through their mouths, dispested it, or reproduced their young in the animal-like fashion in which you do. The earliest men of whom we have any written records were the Bi-Chanics. They lived about fifteen thousand years helere our era and were already well along the read of mechanical evolution. when their evidentations (eff. The Bi-Chankies supporting their food substances and bereathed them the body through the ports of the skin. Thief shill drive were brough to the point of the skin. Thief shill drive were brough to the point of the skin. Thief shill drive were brough the shift of the skin states of the point. The shift of the skin shift of the skin shift of the skin shift of the skin shift of the shift of the skin shift of the skin shift of the machinery to their use, they are the activate shift of the skin shift of the skin shift of the skin disponent shift of the skin shift of the degs and it was their period of time that I was asked in yours.

<sup>10</sup> The metallic voice crassed for a moment and I took advantage of the pause to speak. <sup>17</sup> do not know a thing about the Bi-Channies, or whatever it is your call them,<sup>11</sup> I remarked, <sup>19</sup>but they were certainly not the first to make mechanical hearts. I remember reding in the paper only several months ago about the Month Mongh the dog's body.<sup>10</sup>

"You mean the motor was used as a heart?" "Exactly."

The Ardathian (for so I will call the creature in the cylinder henceforth) made a quick motion with one of its hands.

"I have made a note of your information; it is very interesting."

"Furthermore," I pursued, "a year or two ago I read an article in one of our current magazines telling how a Vienna surgeon was hatching out rabbits and guinea pigs in ecto-genetic incubators."

The Ardathian made another quick gesture with its hand. I could see that my news excited it.

"Perhaps," I said, not without a feeling of satisfaction (for the casual allission to myself as hardly human had itsed my pride "perhaps you will find it as interesting to visit the people of five hundred years from now, let us say, as you would to visit the Bi-Chanies."

"I can assure you," replied the metallic voke of the Ardahian, "that if I succeed in returning successfully to Ardahia, those periods will be thoroughly explored. I can only express surprise at your having advanced as far as you have, and wonder why it is you have made no practical use of your knowledge."

"Sometimes I wonder myself," I returned. "But I am very much interested in learning more about yourself and your times. If you would resume your story...."

"With pleasure," reglete the Archithan. "In Ardithan, we do not his in houses or in chics. Neither, and the second second second second second second Consists. The chemical hadry yes are circulating body has taken the place of block. The fidd is through these takes which run into and through my body has taken the place of block. The fidd is the ground second second second second second in ground second second second second second the ground second second second second second the ground second second second second second the second se

other ray which carries it back into the surrounding air. Have you noticed the transparent substance' enclosing me?"

"The cylinder of glass, you mean?"

"Glass I What do you mean by glass?" "Why, that there," I said, pointing at one of the panes of glass in the window.

THE Ardathian directed a metal tube at the spot indicated. A purple streak flashed out, hovered a moment on the pane, and then withdrew

"No," came the metallic voice, "not that. The cylinder, as you call it, is made of a transparent substance, very strong and practically unbreakable. Nothing can penetrate it but the rays which you see, and the two whose action I have described above, which are invisible. Know then that we Ardathians are not delivered of the flesh; nor are we introduced into incubators as ova taken from female bodies, as were the Bi-Chanics. Among the Ardathians there are no males or females. The cell from which we are to develop is created synthetically. It is fertilized by means of a ray and then put into a cylinder such as you observe surrounding me. As the embryo develops, the various tubes and mechanical devices are introduced into the body by our mechanics and become an integral part of it. When the young Ardathian is born, he does not leave the case in which he has developed. That case-or cylinder, as you call it --- protects him from the action of a hostile environment. If it were to break and expose him to the elements, he would perish miserably. Do you follow me?"

"Not quite," I confessed. "You say that you have evolved from men like us, and then go on to state that you are synthetically conceived and machine made. I do not see how this evolution was possible."

"And you may never understand! Nevertheless, I shall try to explain. Did you not tell me you had wise ones among you who are experimenting with mechanical hearts and ecto-genetic incubators? Tell me, have you not\*others engaged in tests tending to show that it is the action of environment, and not the passing of time, which accounts for the aging of organisms?"

Well," I said hesitatingly, "I have heard tell of chicken hearts being kent alive in special containers which protoct them from their normal environment."

"Ah, exclaimed the metallic voice, "but Hoomi will be astounded when he learns that such experiments were carried on by pre-historic men fifteen thousand years before the Bi-Chanics! Listen closely, for what you have stated about chicken bearts provides a starting point from which you may be able to follow my explanation of man's evolution from your time to mine. Of the thousands of years separating your day from that of the Bi-Chanics I have no authentic knowledge. My exact knowledge begins with the Bi-Chanics. They were the first among men to realize that man's hodily advancement lay on and through the machine. They perceived that man only became human when he fashioned tools; that the tools increased the length of his arms, the grip of his hands, the strength of his muscles. They observed that with the aid of the machine, man could circle the earth, speak to the planets, gaze intimately at the stars. We will increase our span of life on earth said the Bi-Chanics.

by throwing the protection of the machine, the things that the machine produces, around and into our bodies. This they did, to the best of their ability, and increased their longevity to an average of about two hundred years. Then came the Tri-Namics. More advanced than the Bi-Chanics, they reasoned that old age was caused, not by the passage of time. but by the action of environment on the matter of which men were composed. It is this reasoning which causes the men of your time to experiment with chicken hearts. The Tri-Namics sought to perfect devices for safe-guarding the flesh against the wear and tear of its environment. They made envelopes-cylinders-in which they attempted to bring embryos to birth and to rear children, but they met with only partial success.

"You speak of the Bi-Chanics and of the Tri-Namics," I said, "as if they were two distinct races of people. Yet you imply that the latter evolved from the former. If the Bi-Chanics civilization fell, did any period of time elapse between that fall and the rise of the Tri-Namics? And how did the latter inherit from their predecessors ?"

"It is because of your language, which I find very crude and inadequate, that I have not already made that clear," answered the Ardathian." "The Tri-Namics were really a more progressive part of the Bi-Chanics. When I said the civilization of the latter fell; I did not mean what that implies in your language. You must realize that fifteen thousand years in your future, the race of man was, scientifically speaking, making rapid strides. It was not always possible for backward or conservative minds to adjust themselves to new discoveries. Minority groups, composed mostly of the young, forged ahead, made new deductions from old facts, proposed radical changes, entertained new ideas, and finally culminated in what I have alluded to as the Tri-Namics. Inevitably, in the course of time, the Bi-Chanics died off, and conservative methods with them. That is what I meant when I said their civilization fell. In the same fashion did we follow the Tri-Namics. When the latter succeeded in raising children inside the cylinder, they destroyed themselves. Soon all children were born in this manner. In time the fate of the Tri-Namics became that of the Bi-Chanics, leaving behind them the Machine Men of Ardathia, who differed radically from them in bodily structure-so many human nucleii inside of machines-vet none the less their direct descendants.A

For the first time, I began to get an inkling of what the Ardathian meant when it alluded to itself as a Machine Man. The appalling story of man's final evolution into a controlling center that directed a mechanical body, awoke something akin to fear in my heart. If it were true, what of the soul, spirit, God. . . .

The metallic voice went on.

"You must not imagine that the early Ardathians possessed a cylinder as invulnerable as the one which protects me. The first envelopes of this nature were made of a pliable substance, which the wear and tear of environment wore out within three centuries. The substance composing the envelope bas gradually been improved, perfected, until now it is immune for fifteen hundred years to anything save a powerful explosion or some other major catastrophe."

'Fifteen hundred years " I exclaimed,

#### THE MACHINE MAN OF ARDATHIA

"Barring accident, that is the length of time an Ardathian lives. But to us fifteen hundred years is no longer than a hundred would be to you. Remem-ber, please, that time is relative. Twelve hours of your time is a second of ours, and a year. . . . But suffice it to say that very few Ardathians live out their allotted span. Since we are constantly engaged in hazardous experiments and dangerous expeditions. accidents are many. Thousands of our brave explorers have plunged into the past and never returned. They probably materialized inside solids and were annihilated. But I believe I have finally overcome this danger with my disintegrating ray.

"And how old are you?"

"As you count time, five bundred and seventy years. You must understand that there has been no change in my body since hirth. If the cylinder were everlasting, or proof against accident, I should live forever. It is the wearing out, or breaking up of the envelope, which exposes us to the dangerous forces of nature and causes death. Some of our scientists are engaged in trying to perfect means for building up the cylinder as fast as the wear and tear of environment breaks it down : others are seeking to rear embryos to birth with nothing but rays for covering-rays incapable of harming the organism, yet immune to dissipation by environment and incapable of destruction by explosion. So far they have been unsuccessful; but I have every confidence in their ultimate triumph. Then we shall be as im-mortal as the planet on which we live."

I STARED at the cylinder, at the creature inside the cylinder, at the ceiling, the four walls of the room, and then back again at the cylinder. I pinched the soft flesh of my thigh with my fingers. I was awake all right; there could be no doubt about that.

"Are there any questions you would like to ask?" came the metallic voice.

"Yes," I said at last, half fearfully. "What joy can there be in existence for you? You have no sex : you cannot mate. It seems to me." I besitated "it seems to me that no hell could be greater than centuries of living caged alive inside that thing you call an envelope. Now I have full command of my limbs and can go where I please. I can love .

I came to a breathless stop, awed by the lurid light which suddenly gleamed in the winkless eyes.

"Poor pre-historic mammal," came the answer, "how could you, groping in the dawn of human existence, comprehend what is beyond your lowly environment! Compared to you, we are as gods, No longer are our loves and bates the reaction of viscera. Our thoughts, our thinking, our emotions are conditioned, molded to the extent we control the impediate environment. There is no such thing as mind-of the . . . But it is impossible to continue. Your vocabulary is too limited. Your mentalityit is not the word I like to use, but as I have repeatedly said, your language is woefully inadequate -has a restricted range of but a few thousand words. Therefore I cannot explain further. Only the same lack-in a different fashion, of course, and with objects instead of words-hinders the free movements of your limbs. You have command of them, you say. Poor primitive, do you realize how shackled you are with nothing but your hands and feet! You augment them, of course, with a few machines; but they are crude and cumbersome. It is you who are caged alive and not I.. I have broken through the walls of your cage; have shaken off its shackles; have gone free. Behold the command I have of my limbs !"

From an extended tube shot a streak of whitelike a funnel-whose radius was great enough to encircle my seated body. I was conscious of being scooped up and drawn forward with inconceivable speed. For one breathless moment I hung suspended against the cylinder itself, the winkless eyes not an inch from my own. In that moment I had the sensation of being probed, handled. Several times I was revolved, as a man might twirl a stick. Then I was back in the easy-chair again, white, shaken,

"It is true that I never leave the envelope in which I am encased," continued the metallic voice. "But I have at my command rays which can bring me anything I desire. In Ardathia are machines-machines it would be useless for me to describe to you-with which I can walk, fly, move mountains, delve in the earth, investigate the stars, and loose forces of which you have no conception. Those machines are mechanical parts of my body, extensions of my limbs. I take them off and put them on at will. With their help I can view one continent while busily employed in another. With their help I can make time machines, harness rays, and plunge for thirty thousand years into the past. Let me again illustrate."

The tentacle-like hand of the Ardathian waved a tube. The five foot cylinder glowed with an intense light, soun like a top, and so spinning, dissolved into space. Even as I gaped like one petrified-perhaps twenty seconds elapsed-the cylinder reappeared with the same rapidity. The metallic voice announced:

"I have just been five years into your future."

"My future!" I exclaimed. "How can that be when I have not lived it yet?"

"But of course you have lived it."

I stared, bewildered.

"Could I visit my past if you had not lived your future?"

"I do not understand," I said feebly. "It doesn't seem possible that while I am here, actually, in this room, you should be able to travel ahead in time and find out what I shall be doing in a future I haven't reached yet.

"That is because you are unable to grasp intelligently what time is. Think of it as a dimensiona fourth dimension-which stretches like a road ahead and behind you."

"But even then," I protested, "I could only be at one place at a given time on that road, and not where I am and somewhere else at the same second,

"You are never anywhere at any time," replied the metallic voice, "save always in the past or the future But I see it is useless to try to acquaint you with a simple truth, thirty thousand years ahead of your ability to understand it. As I said, I traveled five years into your future. Men were wrecking this building."

"Tearing down this place? Nonsense, it was only erected two years ago.

"Nevertheless, they were tearing it down. I sent forth my visual ray to locate you. You were .... "Yes, yes," I queried eagerly.

"In a great room with numerous other men. They were all doing a variety of odd things. There was . . ."

At that moment, a heavy knock was heard on the door of my room.

"WHAT'S the matter, Matthews?" called a loud voice. "What are you talking about all this time? Are you sick?

I uttered an exclamation of annoyance because I recognized the voice of John Peters, a newspaper man who occupied the apartment next to mine. My first intention was to tell him I was busy, but the next moment I had a better idea. Here was some one to whom I could show the cylinder, and the creature inside of it | someone to hear witness to having seen it besides myself. I burried to the door and threw it open.

"Quick," I said, grasping him by the arm and haul ing him into the room. "What do you think of that?" Think of what?" he demanded.

"Why of that there," I began, pointing with a finger, and then stopping short, with my mouth wide open; for on the spot where a few seconds before the cylinder had stood, there was nothing. The enwelope and the Ardathian had disappeared.

AUTHOR'S NOTE: The material for this manuscript came into my hands in an odd fashion. About a year after the press had crased printing garbled versions of Matthews' experience, I made the acquaintance of Hodge. I asked him about Matthews: He said

"Did you know they've put him in an asylum? You didn't? Well they have. He's batty enough now, noor devil. He was always a little queer, I thought. . I went to see him the other day, and it gave me quite a shock, you know, to see bim in a ward with a lot of other men, all doing something queer. By the way, Peters told me the other day that the apartment house was to be torn down. The City is going to remove several houses along the Lake Shore to widen the boulevard. He says they won't wreck them for three or four years yet. Funny ch? Would you like to see what Matthews wrote about the affair himself?"

I would: and did. And like Matthews, I submit the story to the reading public herewith, and leave it to them to draw their own conclusions.

THE END

## A STORY OF THE STONE AGE By H. G. Wells

(Continued from page 745)

whole. The jackals and vultures had tried her and in those days, but Cat's-skin would stand silently in left her;-she was ever a wonderful old woman,

The next day the three men came again and squat ted nearer, and Wau-Hau had two rabbits to hold up, and the red-haired man a wood-pigeon, and Ugh-lomi stood before the women and mocked them

The next day they sat again nearer-without stones or sticks and with the same offerings, and Cat's skin had a trout. It was rare men caught fish the water for hours and catch them with his hand And the fourth day Uch-lomi suffered these three to come to the squatting-place in peace, with the food they had with them. Ugh-lomi ate the trout Thereafter, for many moons Ligh-lomi was master and had his will in peace. And in the fullness of time he was killed and caten even as Uva had been alain

## THEN CHOOSE **AVIATION!**

ARE you a red-blooded, daring he-man? Are you eager for a life of constant thrills, constant excitement and fascinating events' Do you crave adventure, popularity, admiration, and the applause of great crowds? Then why not get into the Aviation Industry - the greatest adventure since time began --- the greatest thrill ever offered to man? Think what Aviation offers you. Thrills such as you never had before! The praise and plaudits of the multitude. And a chance to get

in on the ground floor ..... where rewards, will be unlimited !

## Fortunes Being

Aviation is growing so swiftly that one can hardly keen track of all the astonishing new developments. Air-mail routes have just been extended to form a vast

aerial network over the entire U. S. Air-lines and airplane factories are springing up all over the country. Men like Henry Ford are investing millions in the future of commercial Aeronautics in America! The possibilities are so tremendous that they stagger imagination.

Everything is set for the greatest boom in history. The fortunes that came out of the automobile industry and out of motion pictures will be nothing compared to the fortunes that will come out of Aviation! There is just one thing holding it up : -lack of trained men! Even in the beginning thousands will be needed -and generously paid. The opportunities open to them cannot be over-estimated. Those who gualify quickly will find themselves on the road to undreamed of money success -- popularity -- and promi-

# Learn Picture Transmission

#### The greatest marvel of the 20th Century

HE marvel of Radio Broadcasting the transmission of the voice and music over the air is no longer the greatest achievement of this precocious 20th century

We now have TELEVISION-the transmission of events over land wires or by radio. A tremendous step ahead of even Radio

For many years experiments on Television have been diligently made by many famous inventors and engineers. Step by step machines have been corrected, improved and simplified-until today-practical machines are in constant operation, annihilating distances in picturing events to the eager public.

Here is the first and only book in print that gives you the complete story of Television from earliest experiments to the present day machines
